Workshop 05: Click Dummy Sprint

Updated: 2026-10-19.

MODULE 05 · THE SOLUTION SPACE · WORKSHOP · GOALS M05-LG1 TO LG4

Step 1 goes wide. The demos decide.

Build only the interface. Behind it, you.

By the start of Module 06, your team has seen people from your segment try your solution as a click dummy, knows it beats what they use today by far, and holds those who asked for it, your first buyers. A click dummy is a clickable mock-up with nothing behind it. It collects signal, only a payment validates. Examples are made up.

Bring. A laptop per founder with an AI app builder (Lovable, Figma Make, Replit or Bolt) and your Module 04 result.

The 90 minutes

Time	Step	You leave with
25′	1 · Go wide, then pick by 10x	One pick per founder, a dated line
40′	2 · From text to interface	One click dummy per founder, ending in an ask
25′	3 · First demos, then commit	Demos booked, targets, midweek day

Step 1 · Go wide, then pick by 10x (25′)

Goal. Real options, judged against what your segment uses today.

1. **Read your Module 04 line (3′)** next to your result. Crossed it? Then you made a type 2 pivot, back into the problem space. Work on the new segment or problem.
2. **Name the status quo (2′).** What does your segment use today, at what cost?
3. **Go wide (10′).** Three solutions per founder, one without software. Then ask an AI for three more.
4. **Pick by 10x (5′).** Each founder keeps one, in under 10 words, with the dimension where it is 10 times better. Proof heard or assumed?
5. **Log the line (5′)** in the Kill Criteria Log, dated, before anyone sees a dummy. A kill line is a result you count, a date, and what you do if you cross it, written down before the data comes in. Count accepted asks per dummy, or adopt the homework's default.

Good	Weak
"Know within an hour that a finalist went quiet." Speed, heard from 4 recruiters.	"AI-powered recruiting platform." Better at everything, assumed.

Output. One pick per founder, a dated line.

Step 2 · From text to interface (40′)

Goal. A dummy that shows one feature and ends with an ask.

1. **Cut to one feature (5′).** The one your segment cares about. Ugly is fine.
2. **Split real from manual (5′).** The screen shows the outcome. Behind it, you.
3. **Prompt the builder (20′)** with segment, pain and value proposition. One path to the outcome, 1 to 5 prompts. Restart, don't patch.
4. **End with the ask (5′).** A trial slot, a letter of intent, a pre-order.
5. **Rehearse (5′)** with another team. Classmates never count.

Good	Weak
Three screens. The alert lands. "Book a 2-week trial" opens a calendar.	Login, settings, twelve features, no ask.

Output. One link per founder, ending in an ask.

Step 3 · First demos, then commit (25′)

Goal. Leave with demos on the calendar.

1. **Message your sign-ups (10′),** then Module 03 interviewees, then your segment's groups. Ask for 20 minutes.
2. **Run a demo now (10′)** if someone answers. They click, you watch. Log it.
3. **Commit to the bar (5′).** "Build one click dummy per founder and show the dummies in 15 guided demos per student with people from your segment, at least 7 per dummy, each ending in an ask that costs them something. The learning floor is one click dummy per team and 5 such demos per student." Each student picks floor or full bar. Set your midweek day.

Good	Weak
Seven recruiters from the new segment messaged, four demos booked, one held, ask accepted.	“We’ll polish it and test next week.”

Output. Booked demos, targets, midweek day.

Arrived empty-handed?

No sign-ups? Work from your interviews, proof assumed. Switched segment? Post your dummy in the new segment’s groups.

Bring and use

The 10x Value Prop Test, the Validation Hierarchy, the Student Toolkit. The lecture is background.
