Workshop 00 — Startup Autopsy

> Module 00 · Kickoff — No-Bullshit Entrepreneurship · 90 minutes

The 90 Minutes

Time	Block	What happens
5m	**Scene Setting**	Startup graveyard framing + case study distribution
20m	**Autopsy Phase**	Teams analyze assigned failed startup case study
15m	**Report Out**	90 seconds per team, hard-timed: cause of death → pattern on whiteboard
15m	**Debrief**	Cause-of-death patterns → which kill criterion would have fired, in which week?
25m	**First Signal**	Everyone drafts + SENDS 3 messages to real people about a frustration they've observed. Not friends-for-comfort — real signal.
10m	**Setup**	Student Toolkit + commit to 3 problem hypotheses

Discussion Sparks

- "What's the difference between a startup that dies at €10M revenue vs €0?"
- "If you could only save ONE of these startups, which one and how?"
- "Why do smart TUM engineers keep building things nobody wants?"

Must Produce — Today's Deliverable

Completed autopsy sheet + 3 personal problem hypotheses + 3 First-Signal messages SENT

Kill criteria: You can’t name a single real human who has this problem
