MODULE 5
The Solution Space
From Validated Problem to MVP Concept

ASSIGNMENT: Pick your 10x wedge — and commit to the Weekend Build

A joint initiative by

Check-In:

The Numbers - How many responses? What was the conversion?

Check-In:

The Signal - Validated, invalidated, or inconclusive?

Check-In:

The Pivot - What will you change based on results?

Today

Data review — thresholds read out loud, next to your numbers (15')

IDEA 1 · Diverge, then converge — on solutions now (10')

IDEA 2 · 10x or don't bother (15')

IDEA 3 · Scope the MVP: cut until it hurts (10')

IDEA 4 · Pivots are steering, not failure (5')

Case · DeepL: 10x against free (30')

Workshop · 10x or Die → Weekend Build commitment (90')

Recap from last time

Your Presentations

Show us where you‘re at in 3 Minutes or less!

What did you do?	What did you learn?	How can we help?

Make it credible:

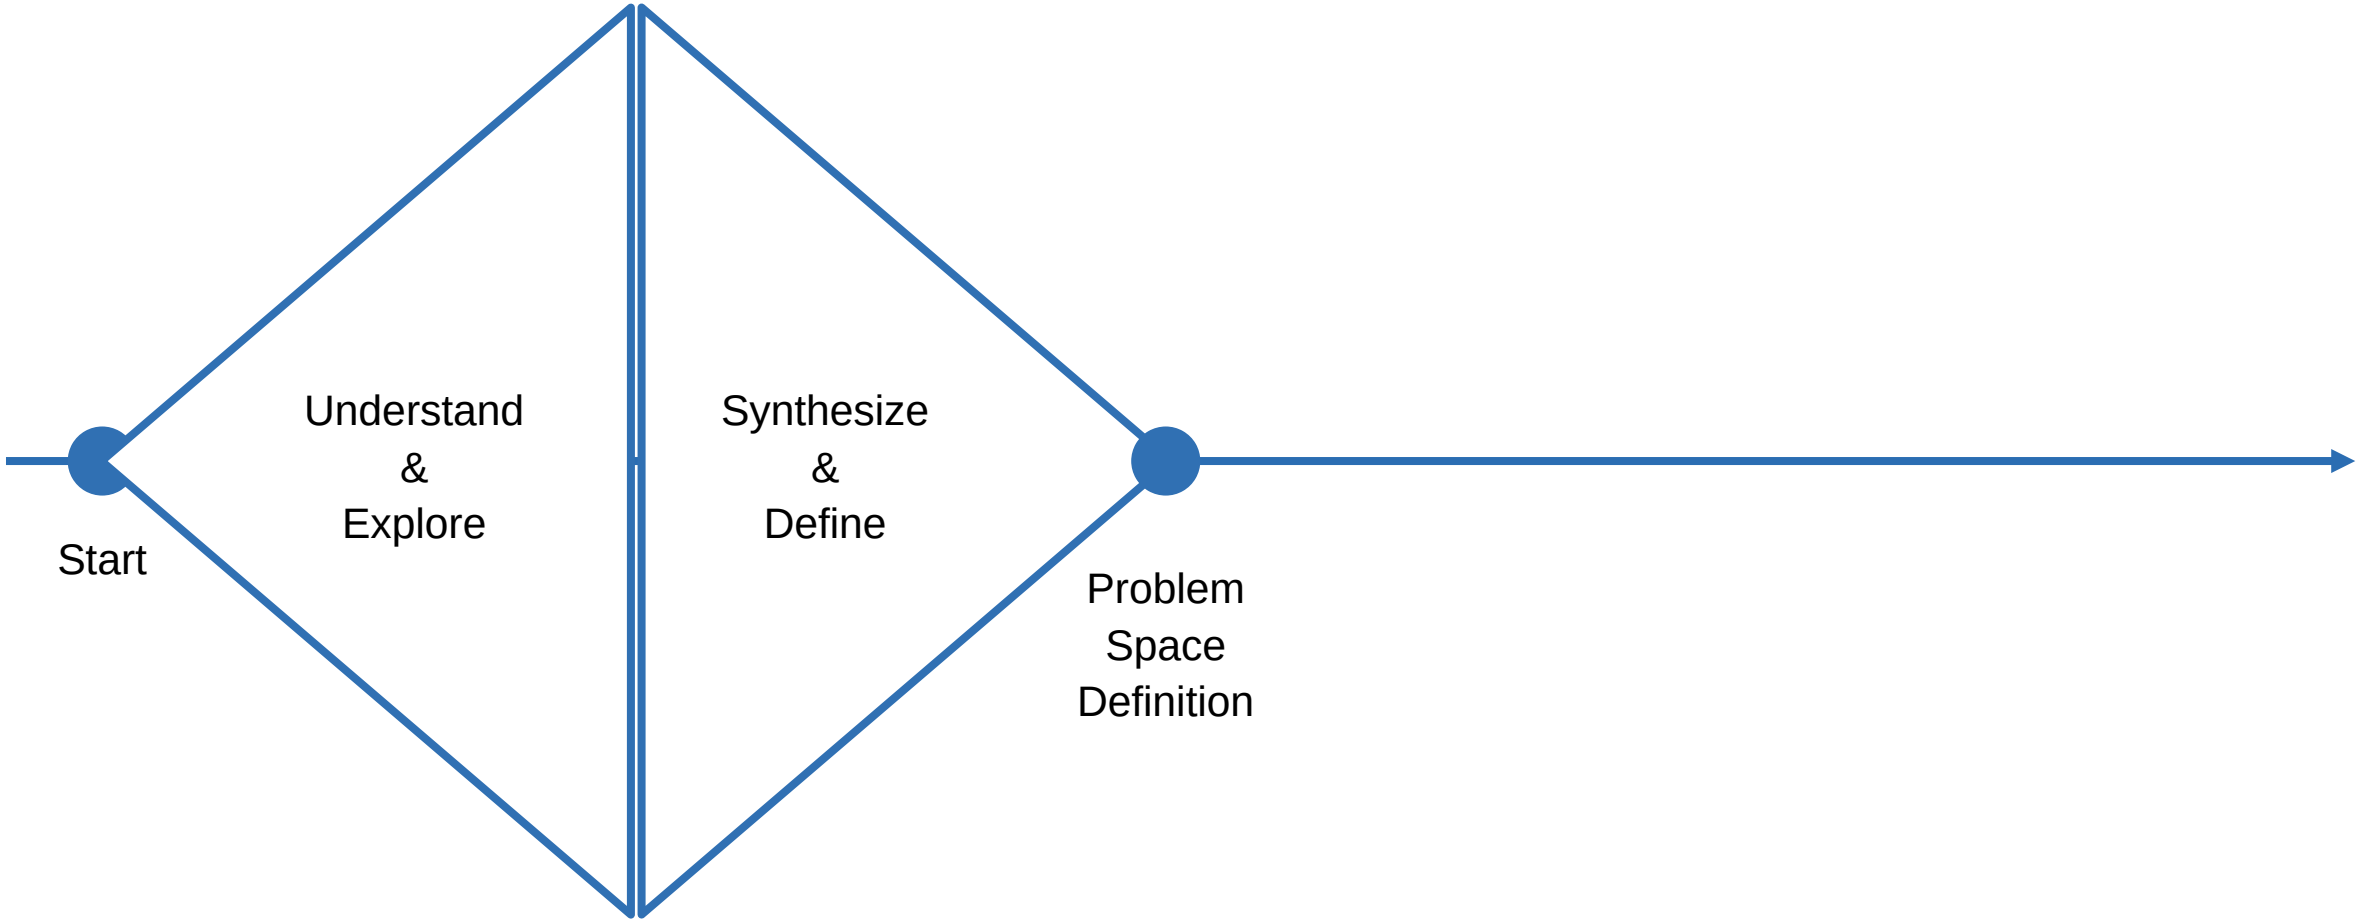

1. Facts: Statistics or Research: What do they say? What does it mean? Where are they from?
2. Numbers: Usage or Surveys: How were they reported? How did they change? Why is it relevant?
3. Quotes: Interviews or Testemonials: What did they say? Why did they say it? What could this mean?
4. Images: Screenshots or Users: What happened? What changed? Why is it relevant?

IDEA 1: Diverge, then converge

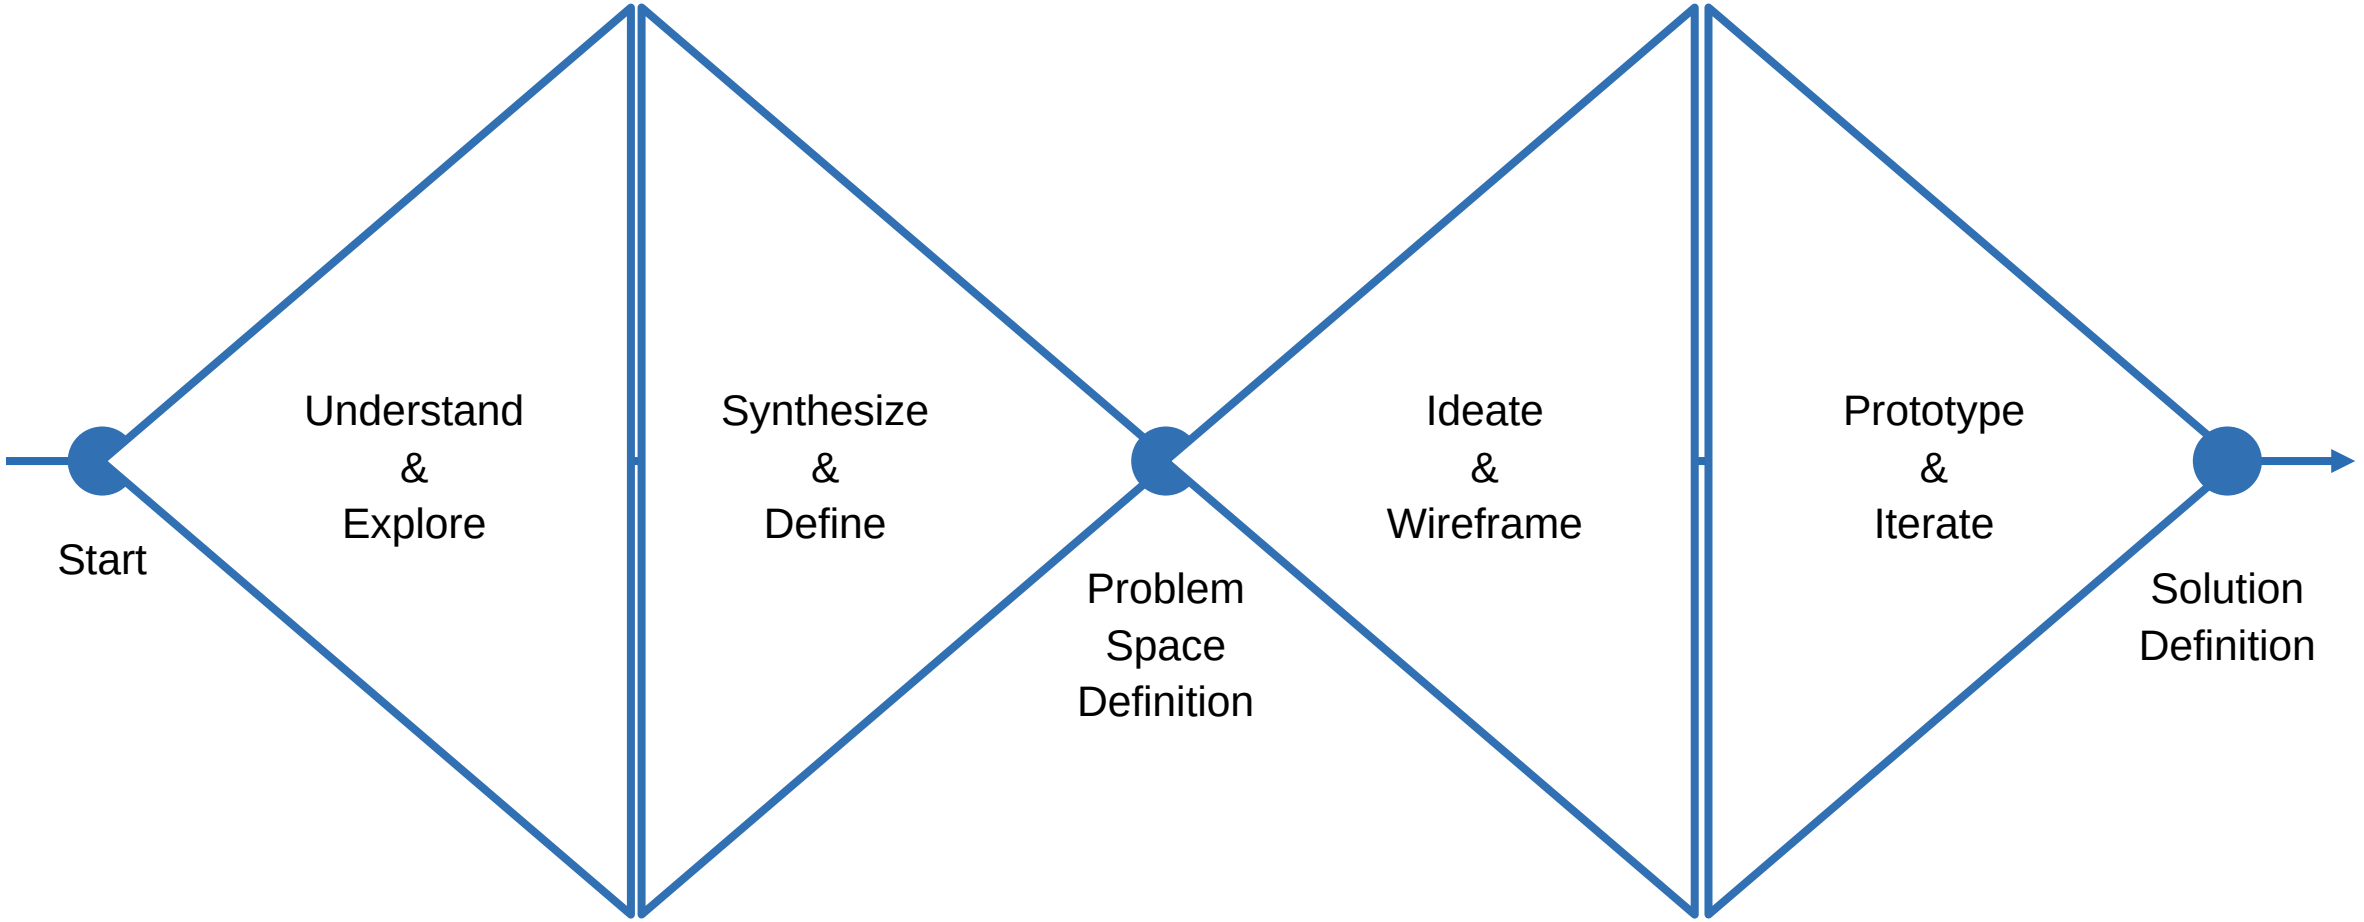

Same discipline as M02, new object: many solution shapes first, one bet after.

The landing-page data decides WHERE to converge — that's why we read thresholds first.

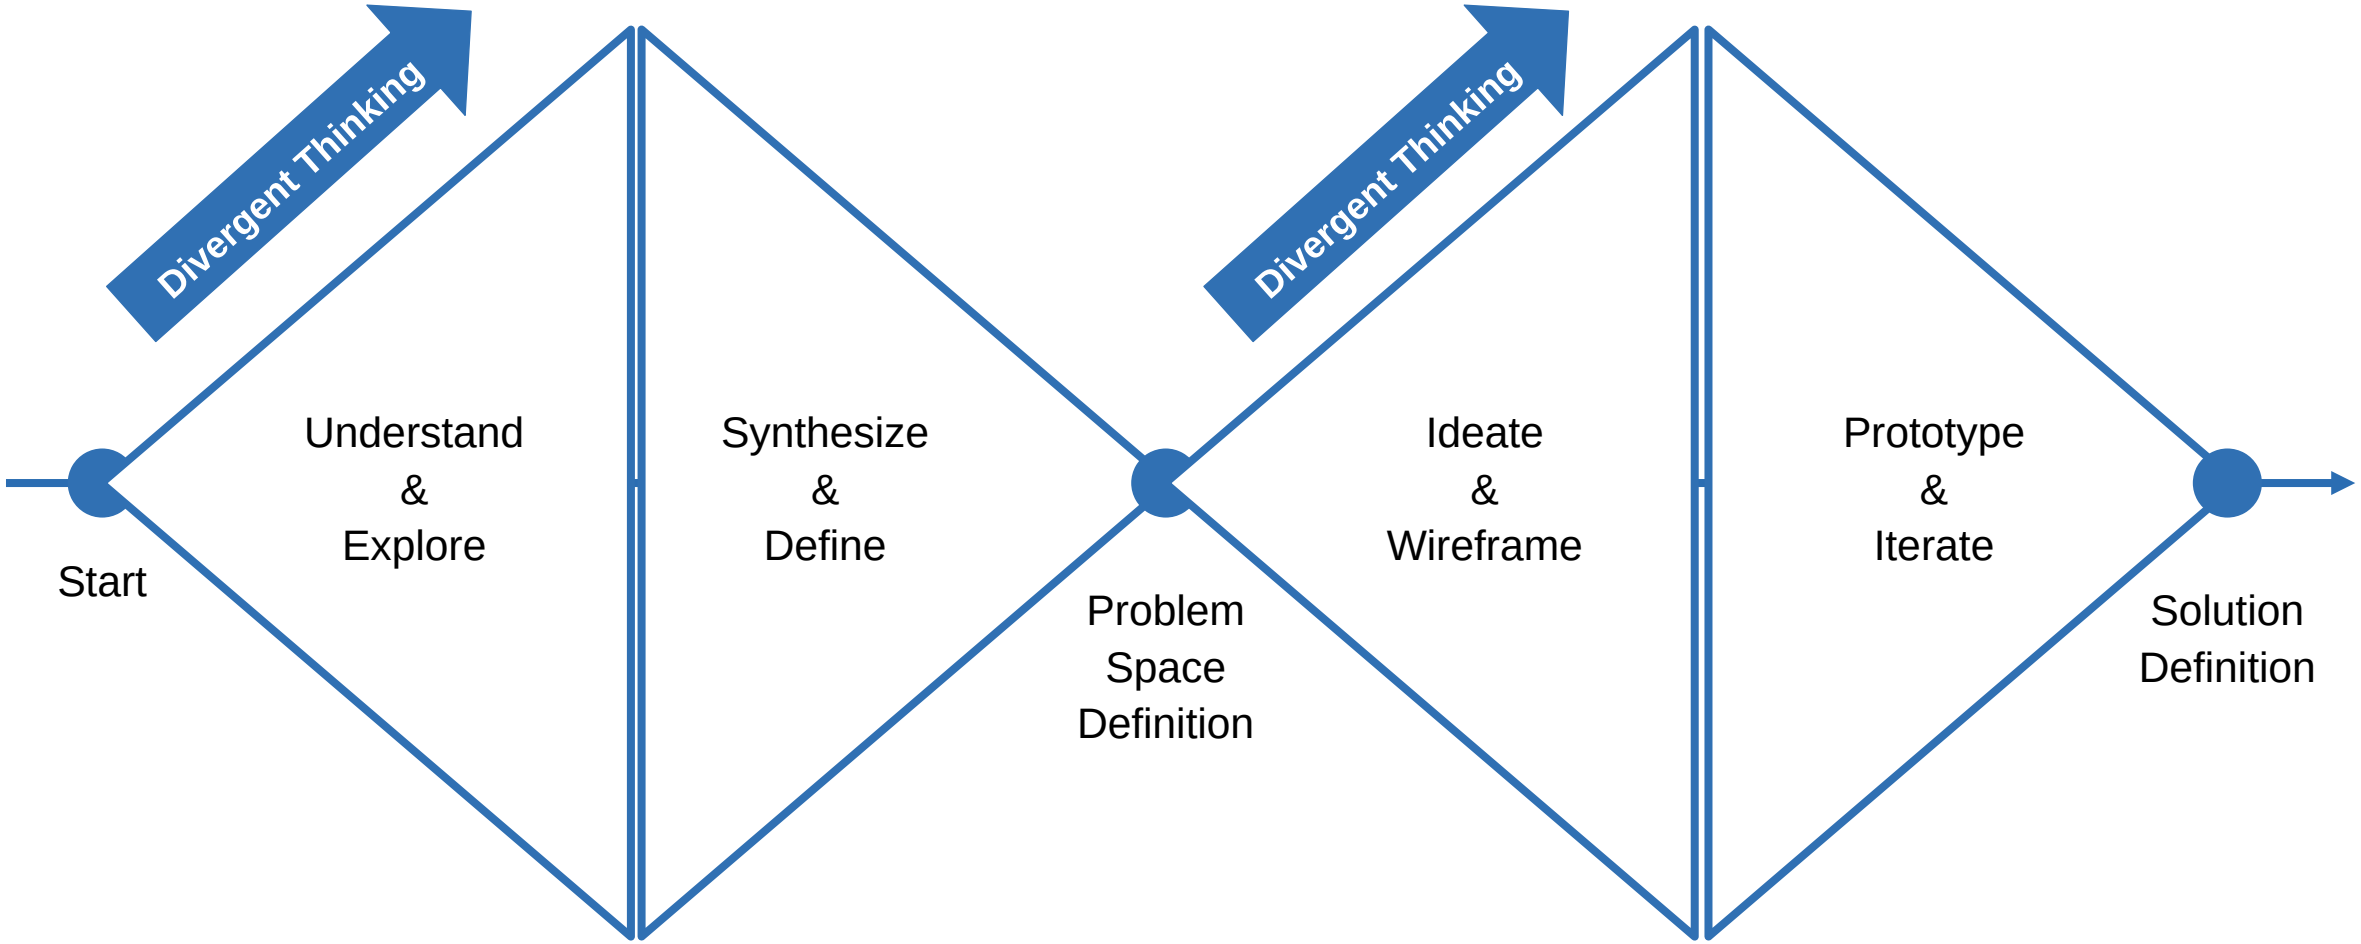

From Problem Space

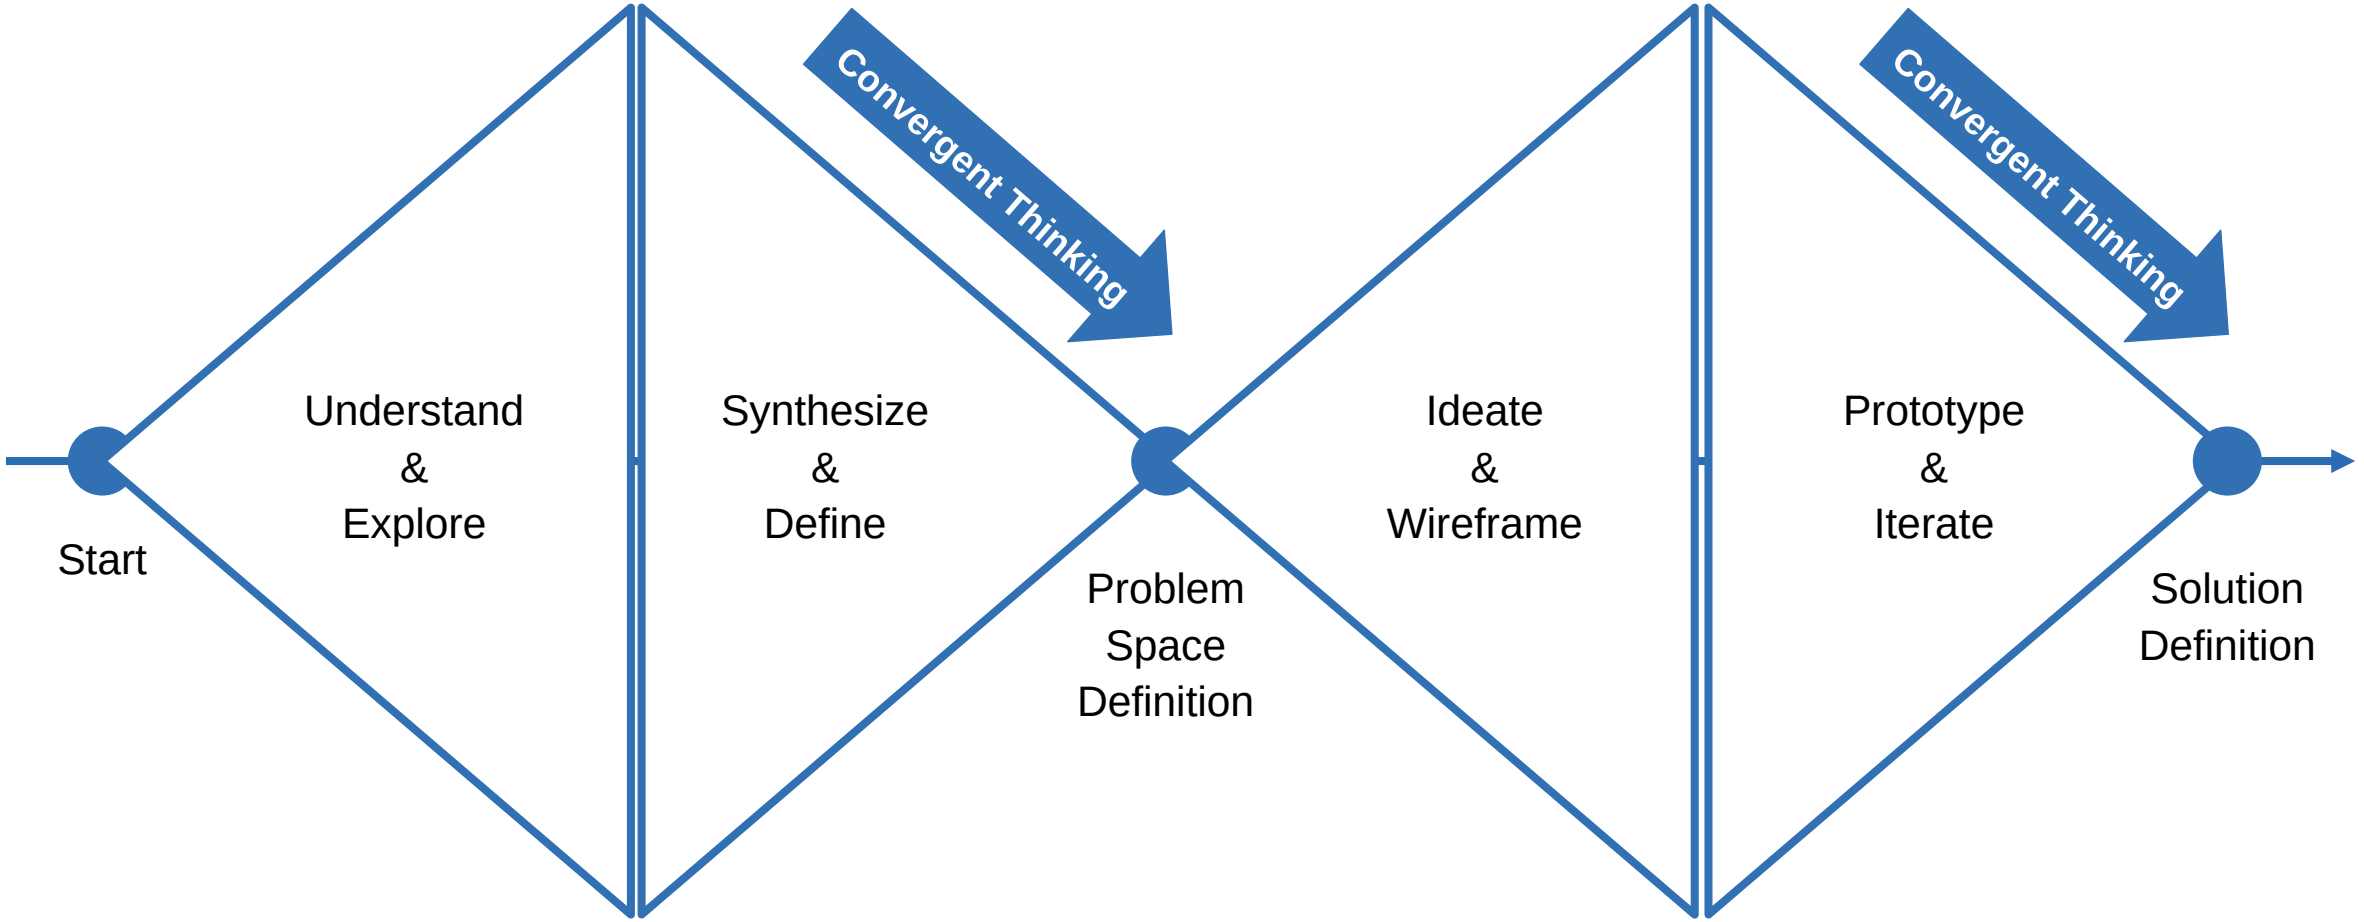

From Problem Space to Solution Space

Divergent Thinking: Exploring possible Solutions

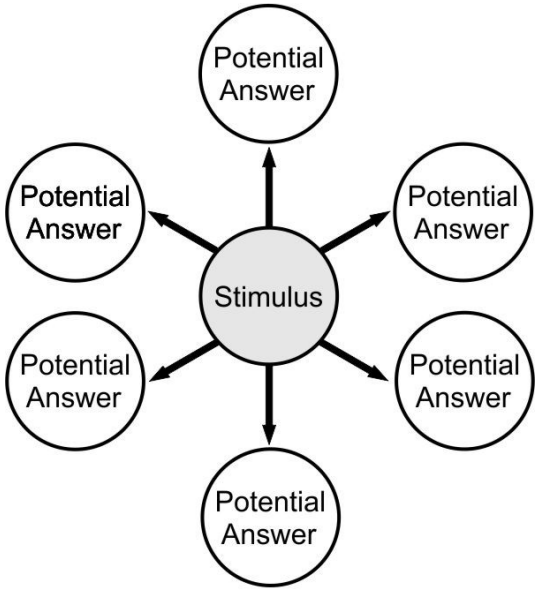

Convergent Thinking: Making the right choice

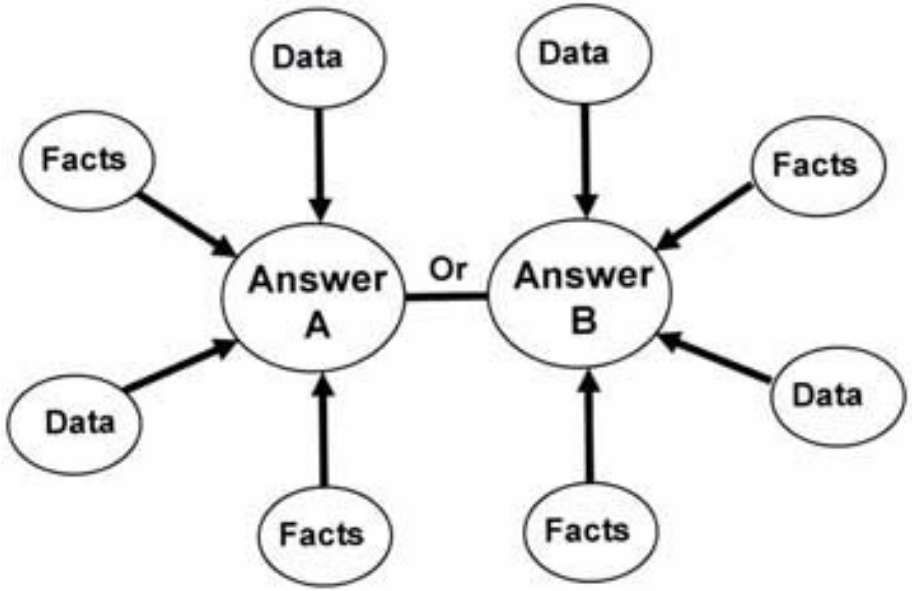

Divergence vs. Convergence

Brainstorming
Mindmapping
Interviews
Discussions
…

DIVERGENT THINKING

Data Analysis
Surveys
Testing
…

IDEA 2: 10x or don't bother

Marginally better always loses to the status quo — switching costs eat 10% improvements alive.

Pick ONE dimension your segment bleeds on and be 10x there. DeepL vs free Google Translate is the bar.

The 10x Test — four gates

1 · 10x on the ONE dimension your hair-on-fire segment bleeds on (not 10% on ten)

2 · Provable in a demo — show, don't argue

3 · Deliverable by THIS team in weeks, not quarters

4 · Priceable — the gain is worth real money to a named person

Score your top solution on all four gates in the workshop. Below 3 of 4: back to divergence.

(Practitioner heuristic — Thiel's 10x rule. Labeled honestly.)

Understanding ideas

A strong idea comes from a strong set of constraints

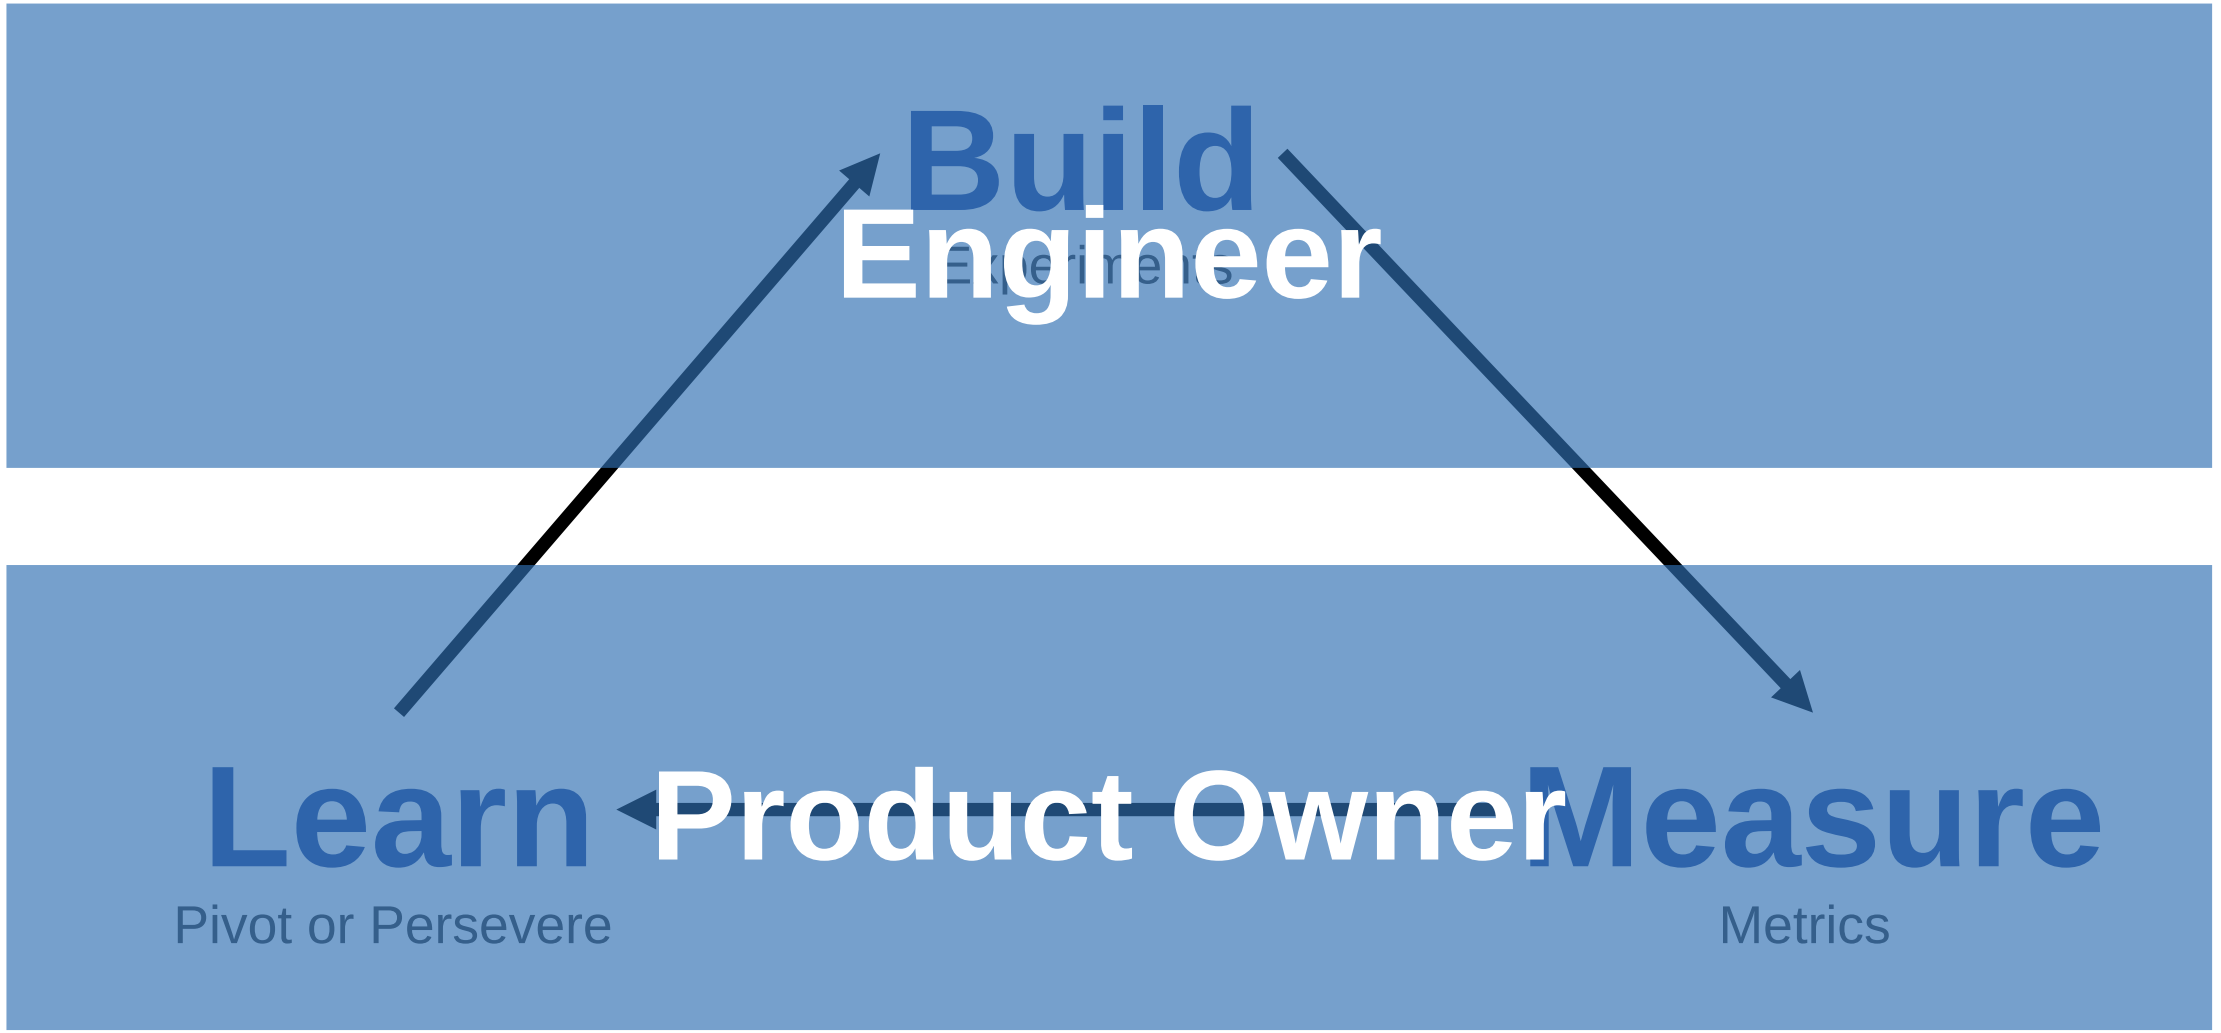

Smart constraints come from subject expertise and experience (you can trust your gut)

If you set your constraints well, there are only few implementations left (it‘s ok to pivot)

If you set your constraints smart, people will enjoy the result

And remember: It‘s 1% inspiration and 99% presperation

AI tilts the tide towards less engineering in the early stages

Don‘t lie!!!

One iteration should not take more thank 4 hours

IDEA 3: Scope the MVP

The Weekend Build ships in 48 hours — so cut features until it hurts, then cut once more.

One core action, one segment, one wow. Everything else is version two.

Defining your solution

Value Proposition

Value proposition canvas

Painpoint: What is the problem that you want to address?

Value proposition: What is your solution to solve this painpoint?

Customer segment:

- Which people are most affected by the painpoint?
- Which people are most willing to pay for solving the painpoint?
- What is the ultimate customer segment to start from?

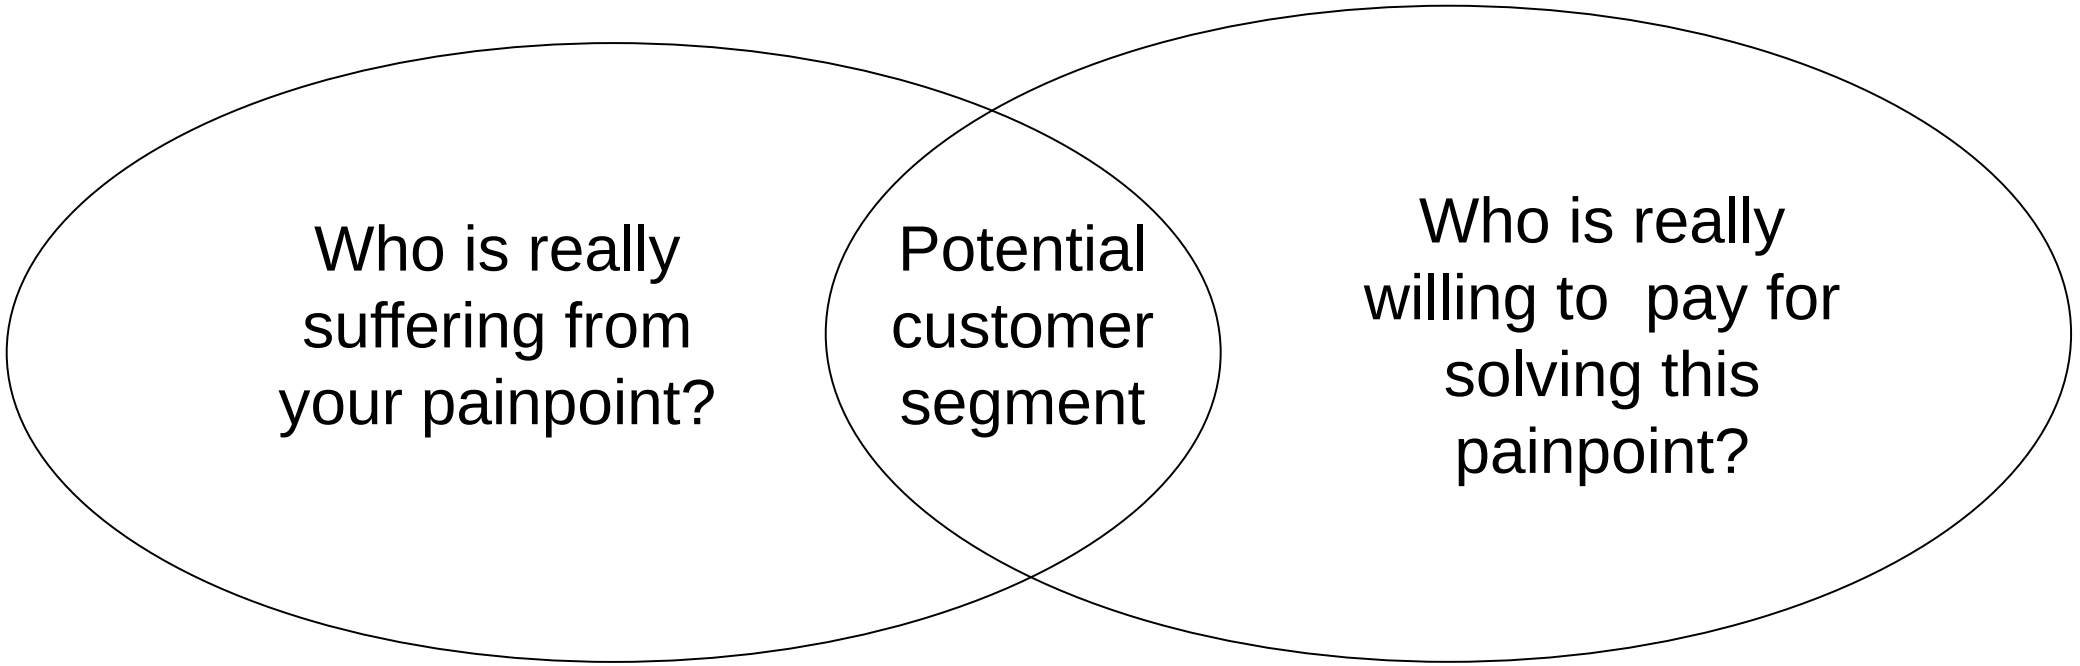

Competition:

- Other companies that address similar painpoint
- Other companies that provide similar value proposition

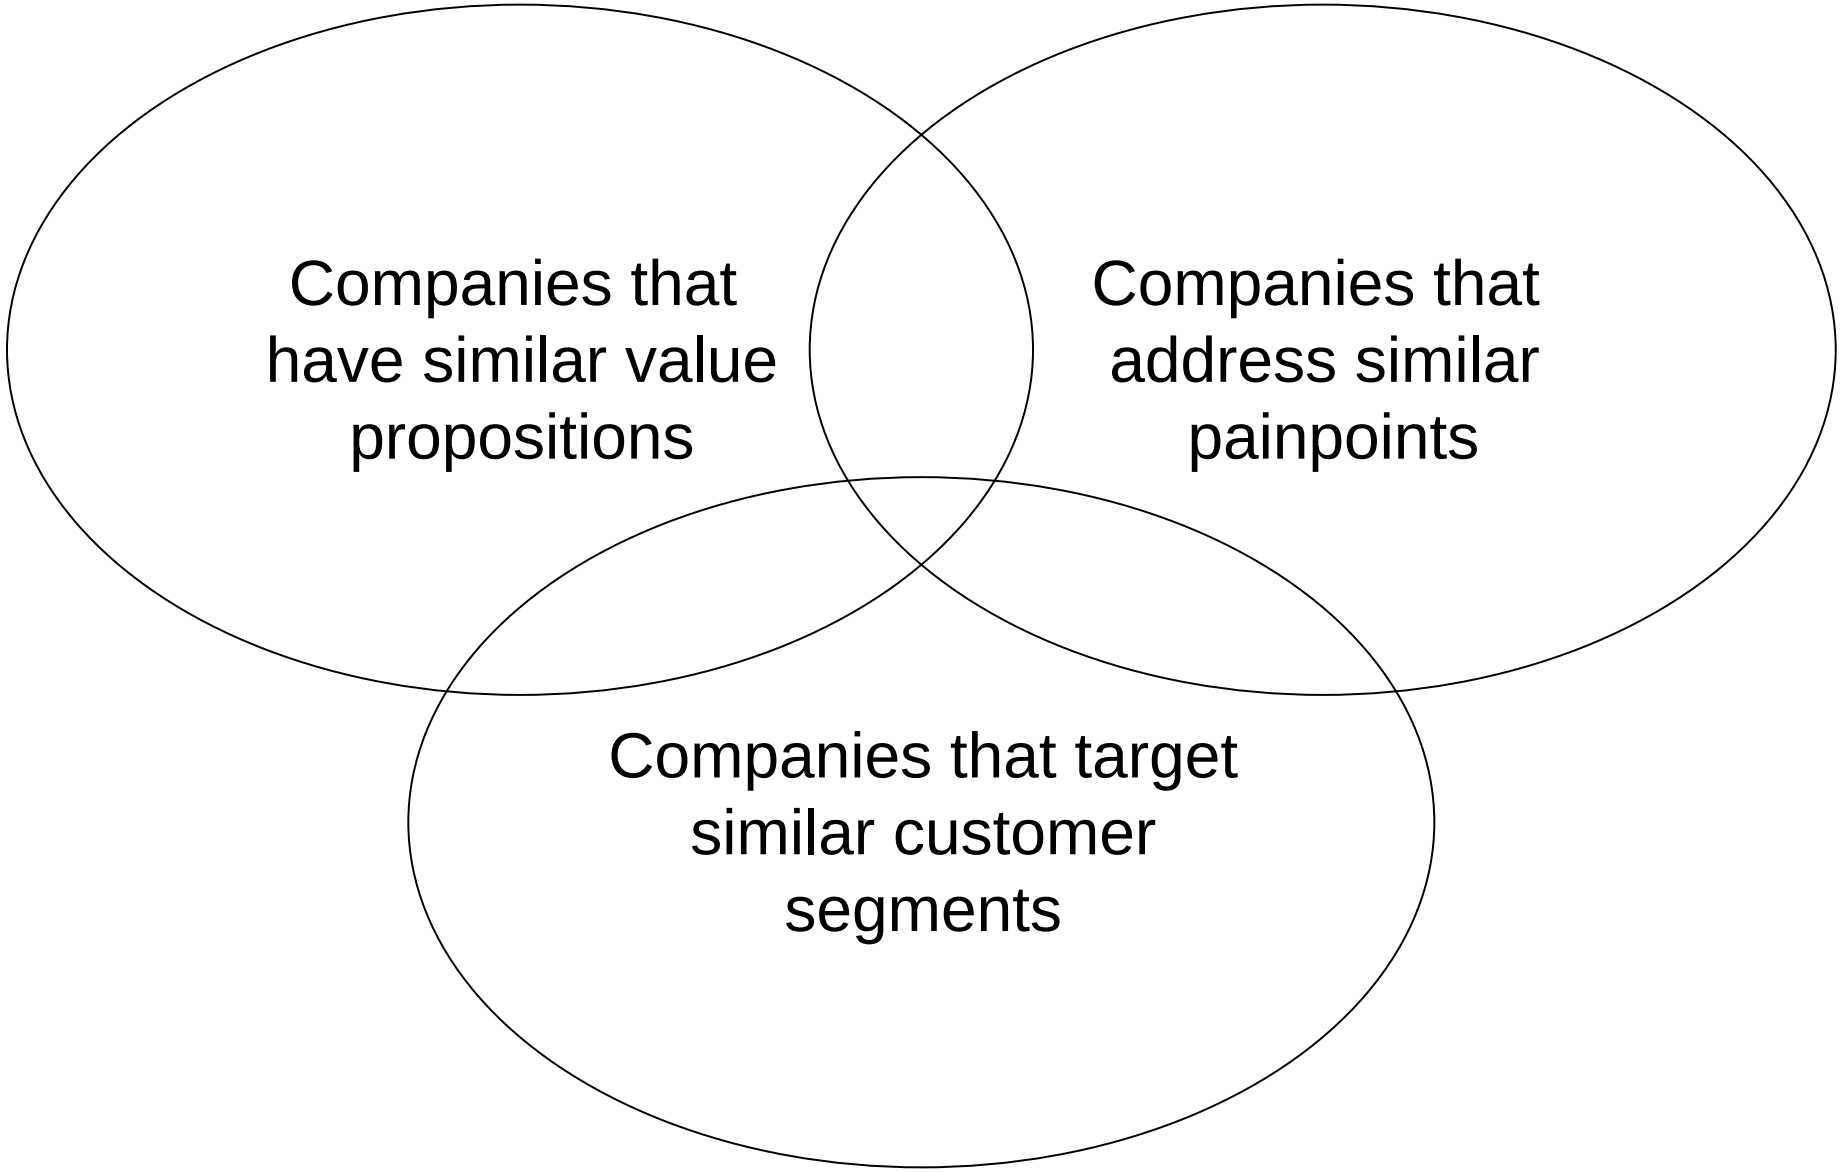

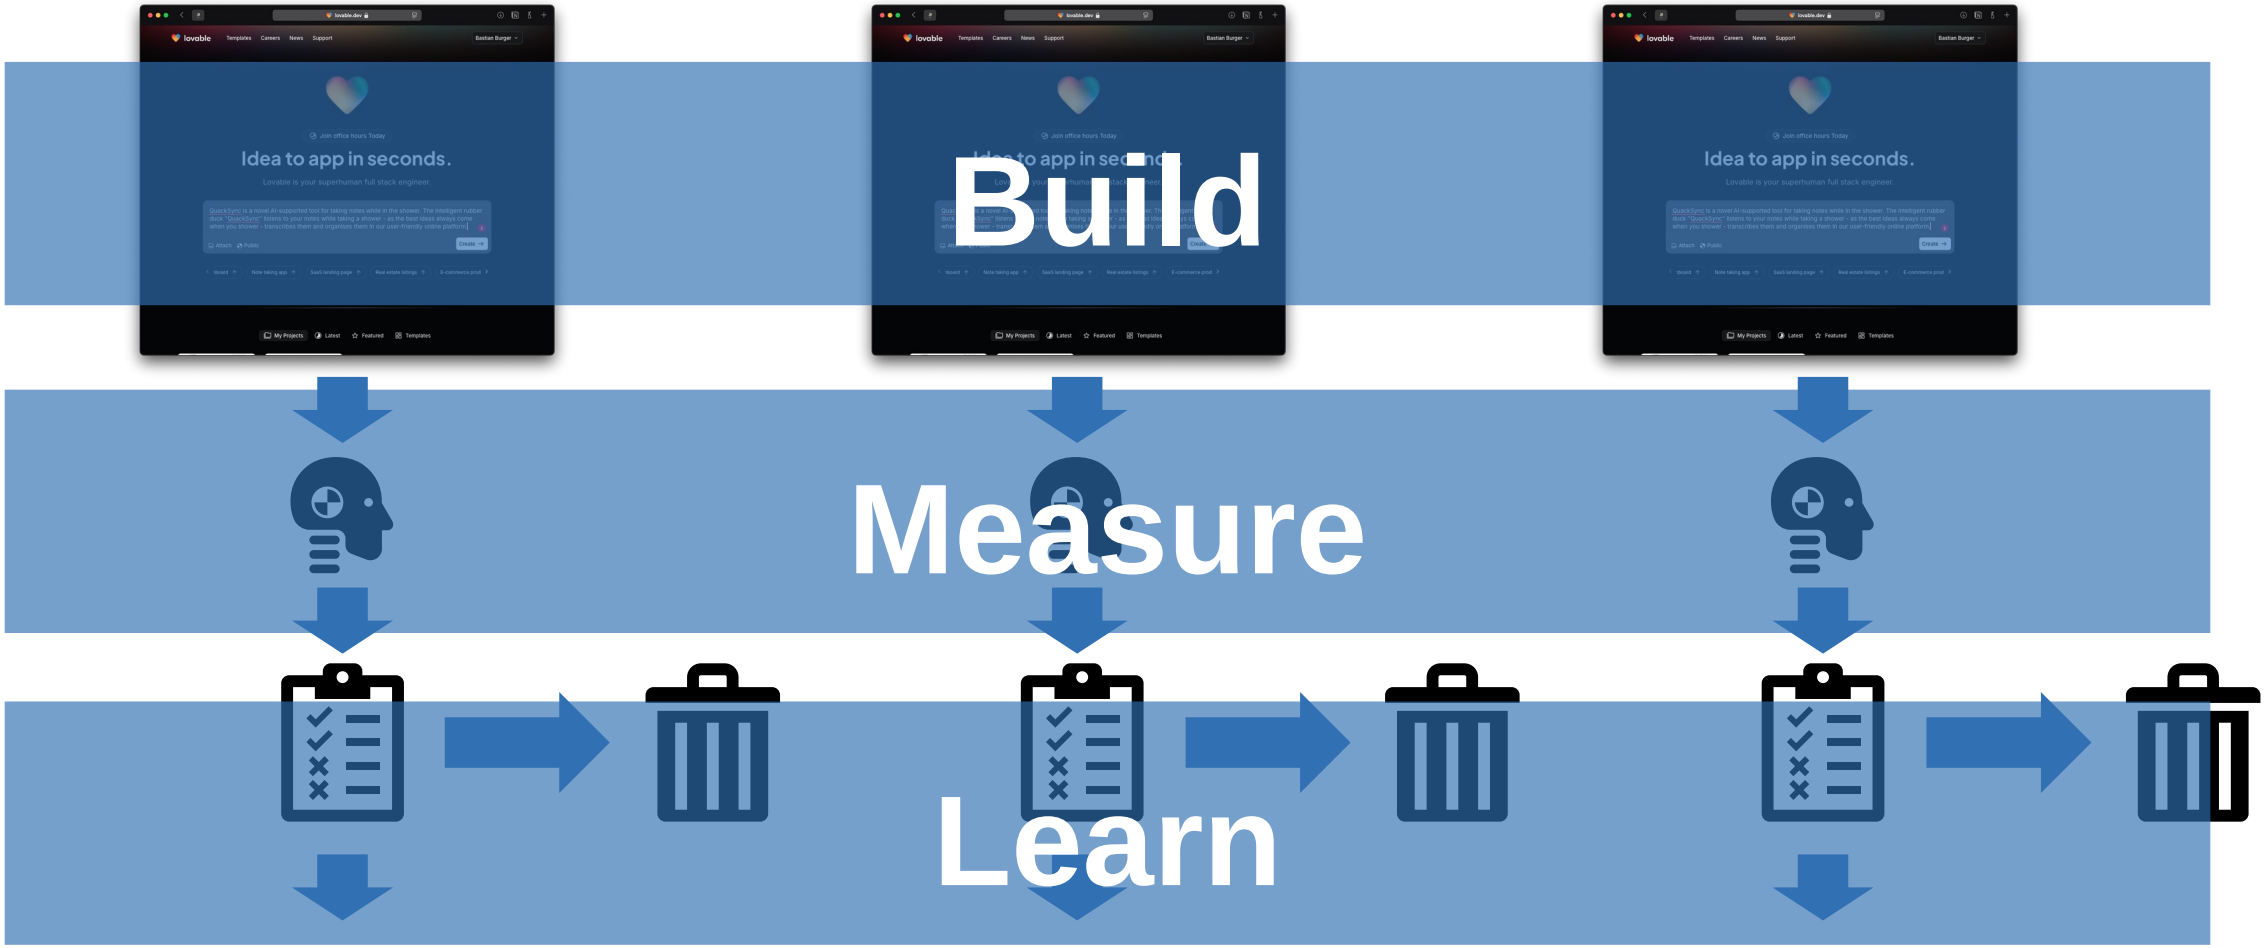

Definining your customer segment

Competitor analysis: Who are my competitors?

The very first prototype

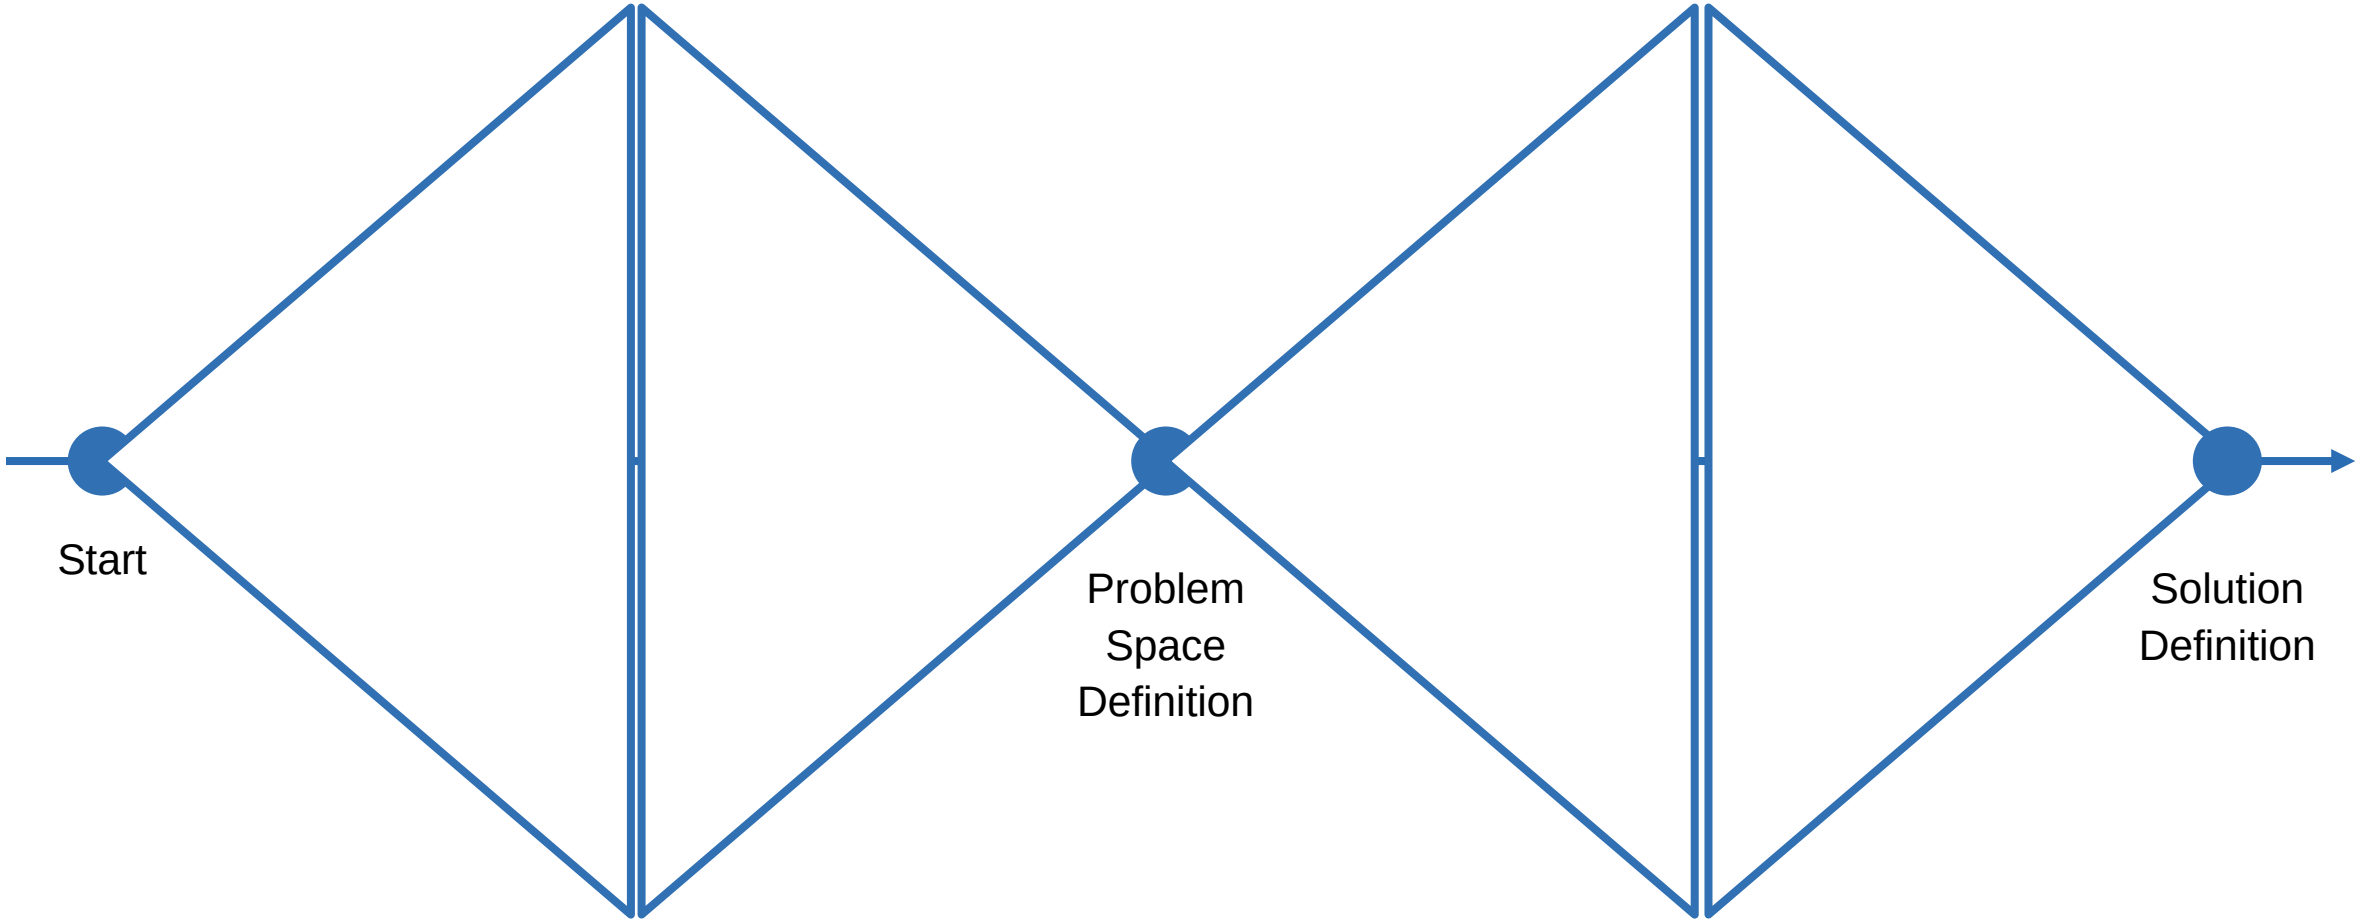

Build
Measure
Learn
Build

IDEA 4: Pivots are steering

Weak landing-page data isn't death — it's data. Type 1: new solution, same problem. Type 2: sharpen the problem.

Decide in the workshop's data review: go, pivot the solution, or pivot the segment.

Pivoting: Changing what you do to find Product-Market Fit

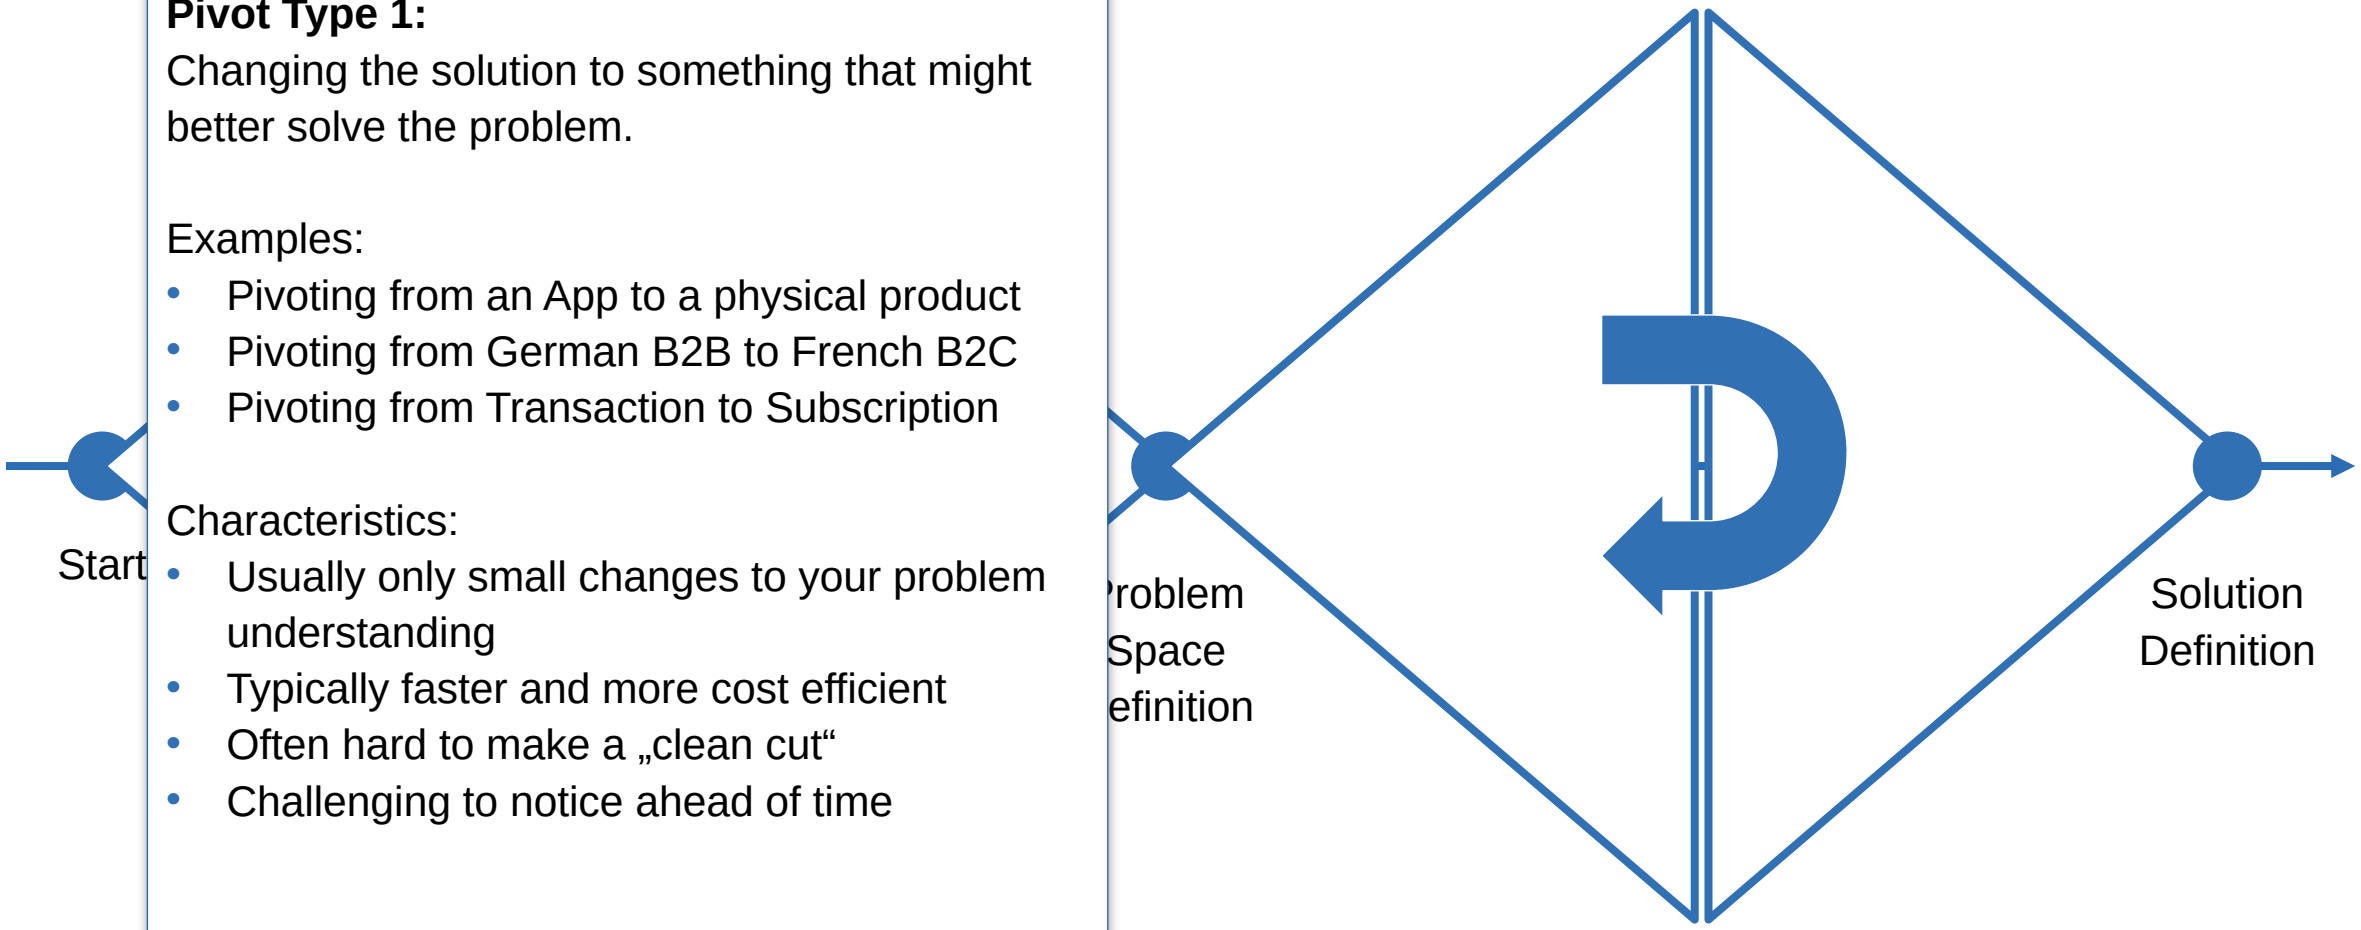

Type 1 Pivot: Finding another Solution to the problem

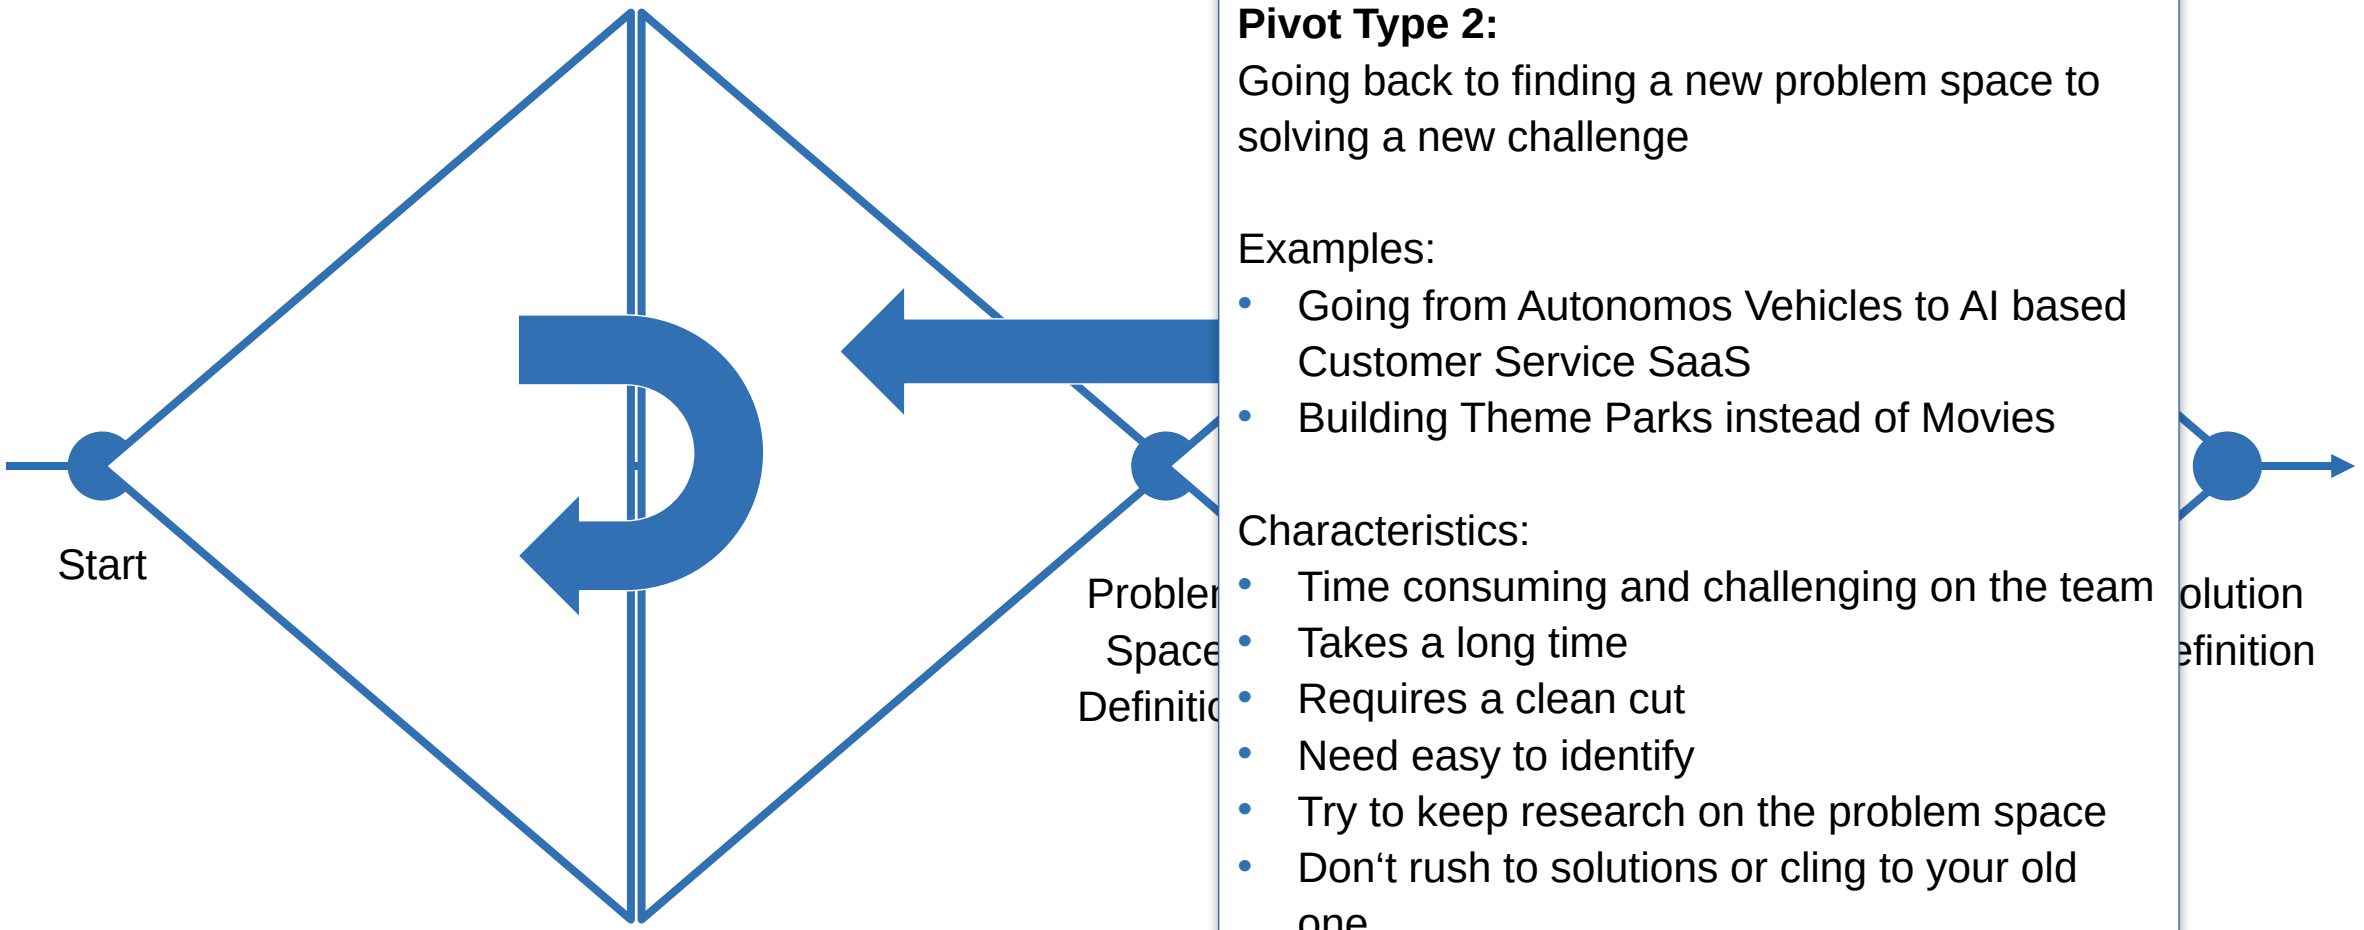

Pivot Type 1:
Changing the solution to something that might better solve the problem.

Examples:
- Pivoting from an App to a physical product
- Pivoting from German B2B to French B2C
- Pivoting from Transaction to Subscription

Characteristics:
- Usually only small changes to your problem understanding
- Typically faster and more cost efficient
- Often hard to make a „clean cut“
- Challenging to notice ahead of time

Type 2 Pivot: Refining the problem space

Pivot Type 2:
Going back to finding a new problem space to solving a new challenge

Examples:
- Going from Autonomos Vehicles to AI based Customer Service SaaS
- Building Theme Parks instead of Movies

Characteristics:
- Time consuming and challenging on the team
- Takes a long time
- Requires a clean cut
- Need easy to identify
- Try to keep research on the problem space
- Don‘t rush to solutions or cling to your old one

What the evidence says

Diverge/converge is the Double Diamond (Design Council) — a design-practice standard, not a law.

Pivot taxonomy: Ries (2011). The 10x rule: Thiel — powerful heuristic, never peer-reviewed. Labels matter.

The RCT thread continues: write the 10x hypothesis BEFORE the Weekend Build; the build is its test (Camuffo et al. 2020).

END RECAP — today in four lines

1 · Diverge wide, converge on the data — not the vibes

2 · 10x on one dimension beats 10% on ten

3 · Scope until it hurts: one action, one segment, one wow

4 · Pivot is steering — type 1 solution, type 2 problem

This week: the Weekend Build. Deployed by Monday. Yes, really.

Workshop: 10x or Die (90 min)

Agenda lives in M05_Workshop_10x-or-Die.md. Weak data? The go/pivot fork happens IN the data review — with your pre-committed threshold on the table.

Must produce: 10x scorecard (all four gates) + MVP spec + the public Weekend Build commitment.

Kill criteria: your 'MVP' needs more than a weekend. That's not an MVP, that's a wish.

MVP Readiness Check

VALUABLE: Does it solve a real pain for your target customer?

USABLE: Can someone use it without instructions?

FEASIBLE: Can you build it in 2-4 hours?

Homework: Create wireframes or mockups for your MVP's core flow

Wrapup & Checkout

Thank You!

A joint initiative by

APPENDIX — original slides (instructor's cut candidates)

Everything below stayed in the deck — moved out of the flow, not deleted. Mark KEEP (returns to flow) or KILL. Only Basti deletes.

Check-In:

What is your Energy Level Today?

You‘re in the perfect storm…

Ray Dalio‘s model for financial life cycles*:

Stage	Description	U.S. Timeline Example	Key Risks
1: New Order Established	A post-war reset crowns a new reserve currency and global leader, fostering stability.	1944 Bretton Woods Agreement: USD becomes world reserve after WWII.	None—honeym oon phase.
2: Peace and Productive Debt	Borrowing fuels innovation and growth; prosperity blooms.	1950s–1960s: Post-war boom, infrastructure investments.	Over-reliance on easy credit.
3: Debt Bubble and Wealth Gap	Excessive borrowing inflates assets; inequality surges as inflation erodes purchasing power for the masses.	1970s–2000s: Housing/credit boom widens the rich-poor divide.	Social unrest from disparity.
4: Bubble Burst and Downturn	Debt implodes, triggering recession.	2008 Financial Crisis: Subprime meltdown.	Systemic contagion.
5: Money Printing and Debasement	Central banks flood the system with liquidity (e.g., QE), but it widens gaps and erodes currency value.	2008–2020: Trillions printed; inflation hits the vulnerable hardest.	Currency devaluation, asset bubbles.
6: Internal Conflict and External Wars	Populism rises; civil strife weakens the empire, inviting rivals.	2020s onward: Polarization, tariffs, and great-power rivalry (U.S.-China).	Revolution or invasion.
7: Restructuring and Reset	Debt is restructured (often painfully); a new order emerges.	Potential 2026+: “Financial heart attack” forces rewrite of global finance.	Total paradigm shift.

Maximum Opportunity

Productivity Crisis

(Clearing out inneficient competitors)

+

Free Capital

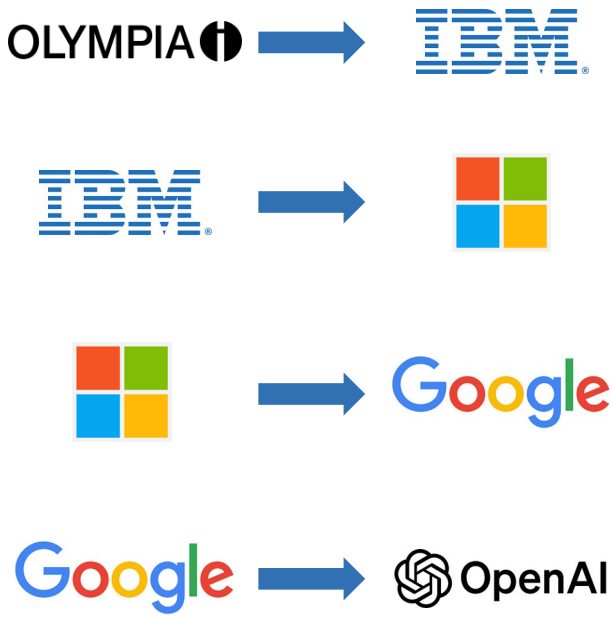

(Seeking new productive outlets)

+

Need for innovative Solutions

(Climate, Security, Demography, …)

New technological frontier:

*These stages are most relevant for the financial markets and don‘t necessarily dramatic societal events

You can do it!

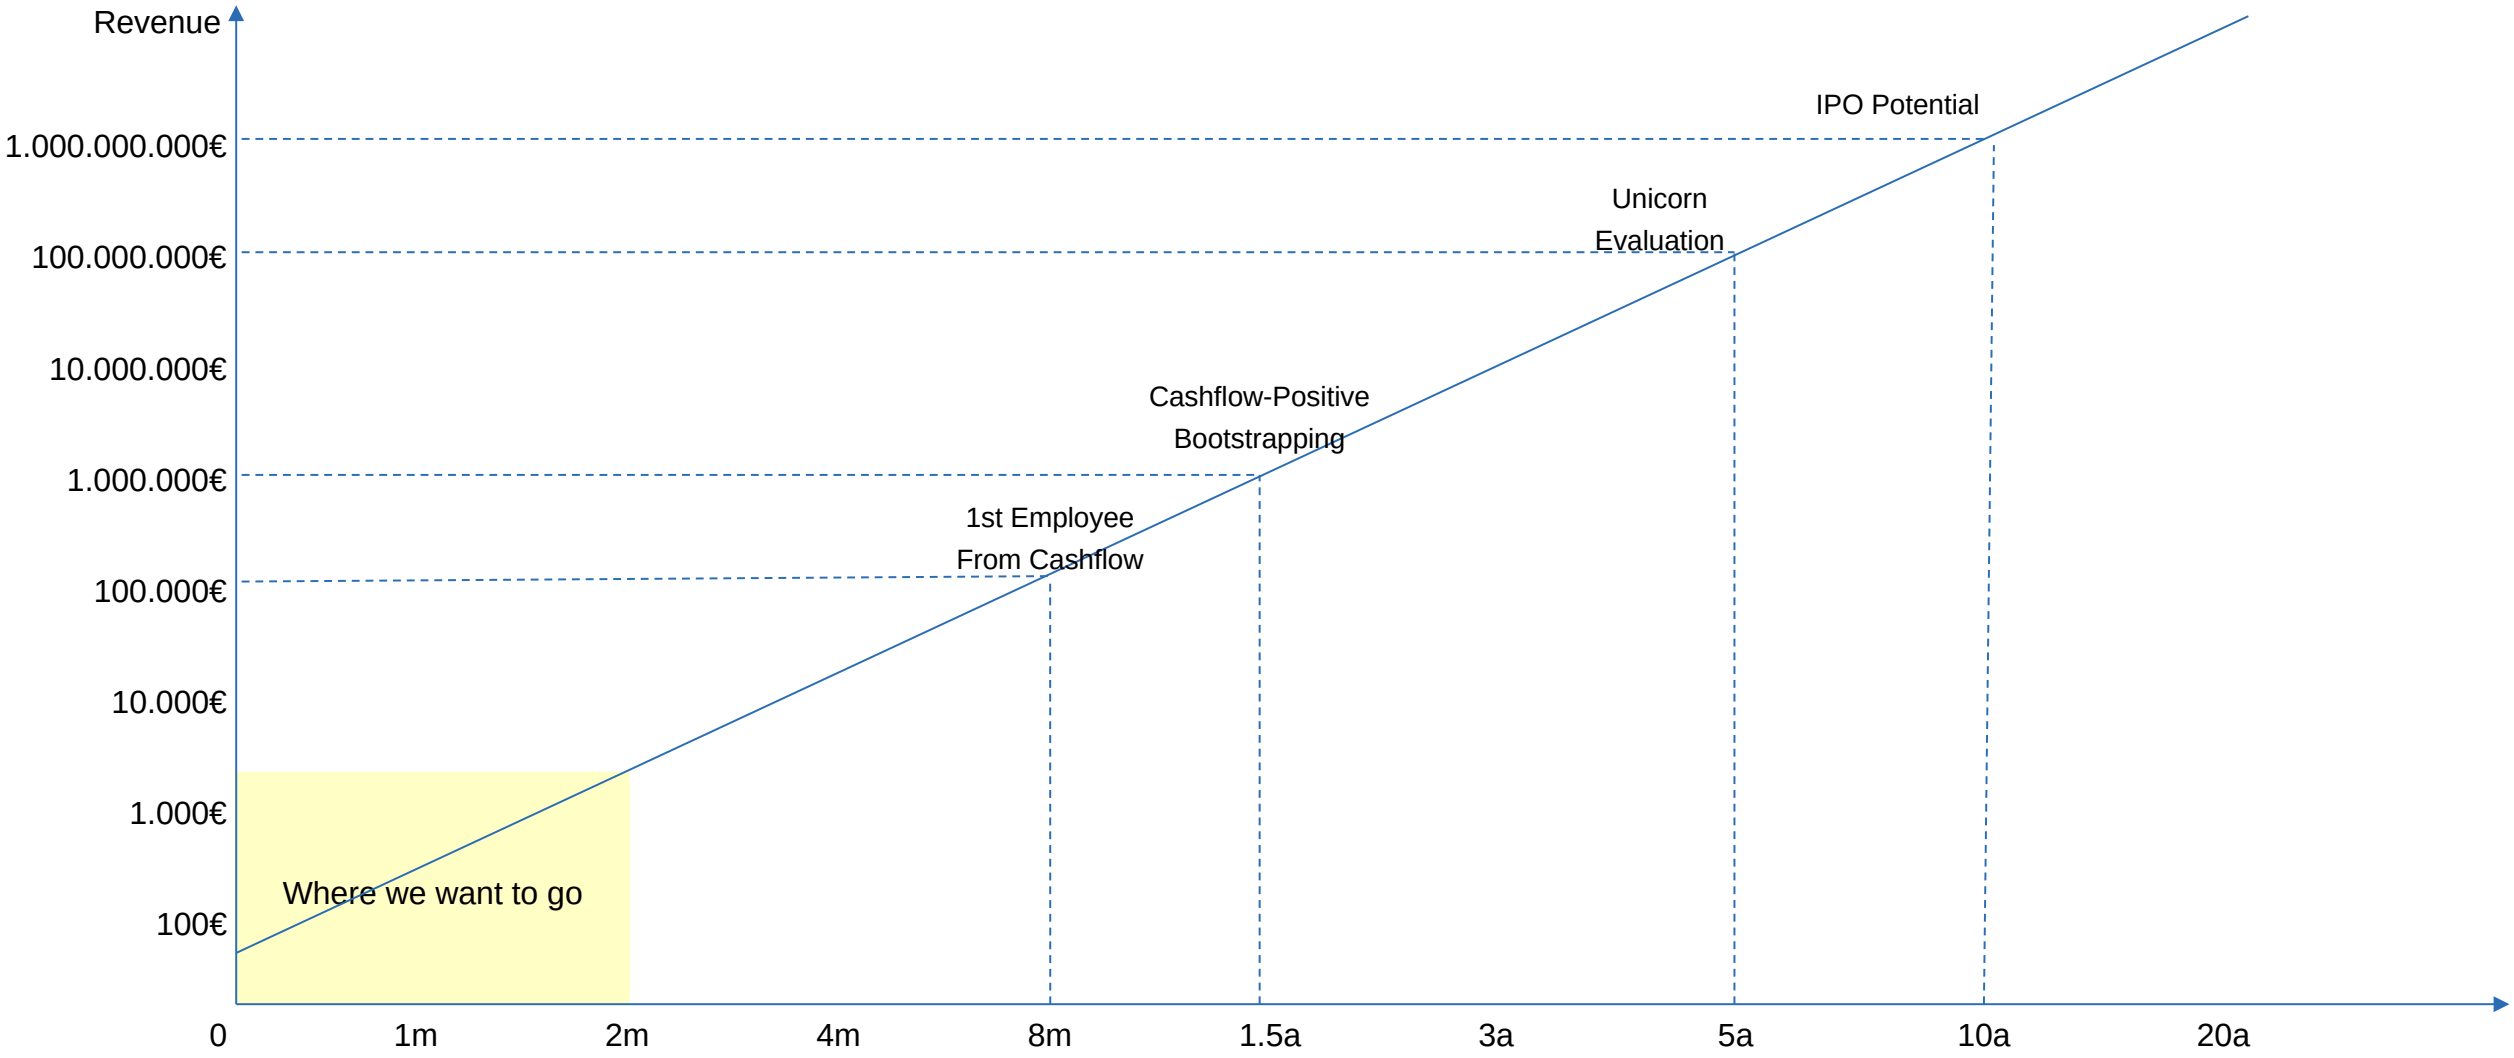

~~But I‘m not an engineer…~~

Yes, you can build it!

~~But we don‘t have a GmbH…~~

Yes, you can ship it!

But it will take time.

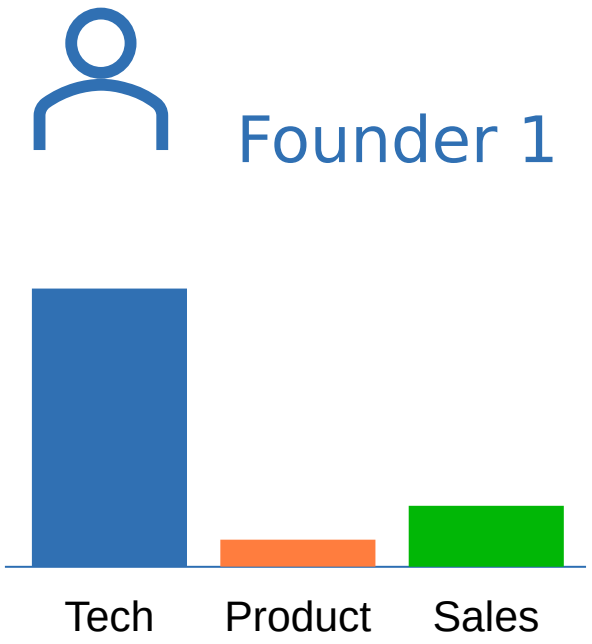

Not scientific reason behind this chart

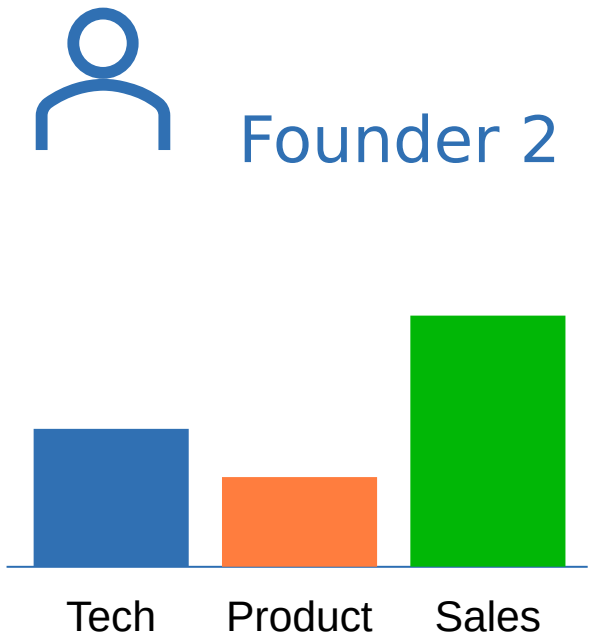

And you need to know which game you are playing.

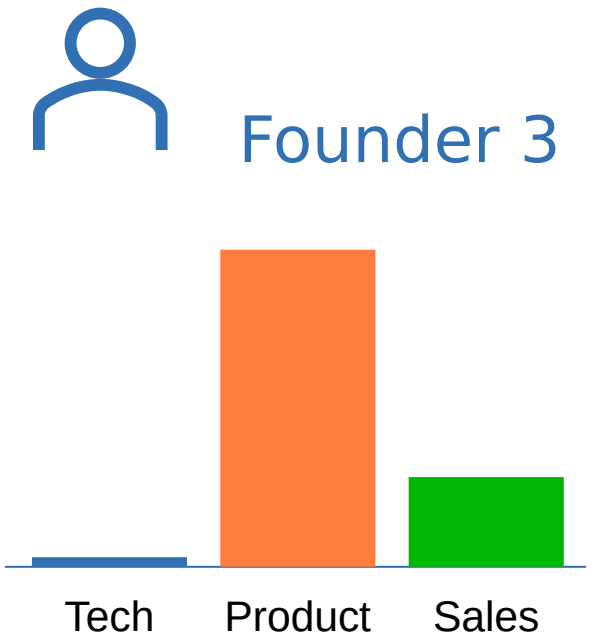

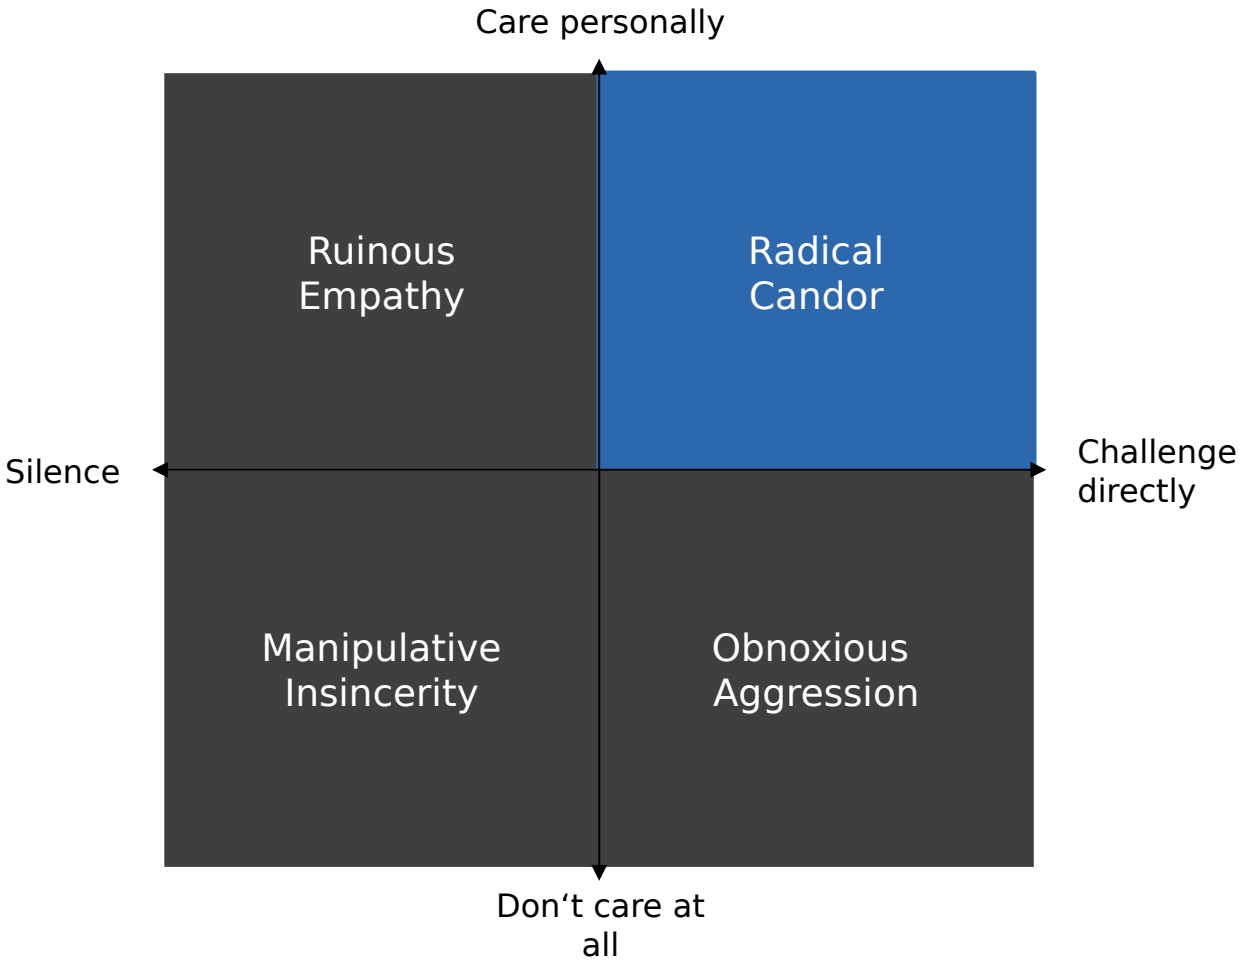

Build a team that is up to the task

And be open

Radical Candor is the crossroads of **Challenging Directly** and **Caring Personally**:

Caring Personally: Radical Candor starts with caring about the person you're addressing. It involves building strong relationships with your team members based on trust, empathy, and genuine concern for their well-being.

Challenging Directly: This means being willing to provide honest, straightforward feedback, even if it's uncomfortable. It's about addressing issues directly and not shying away from difficult conversations.

„But if someone steals my idea“ – The Idea Myth

"Ideas are worth nothing. Execution is everything."

— Paul Graham, Y Combinator

The Startup Paradox:

- 80% of founders didn't start with the final idea
- Airbnb started as selling cereal boxes
- Slack was a failed video game company
- Instagram was a check-in app called Burbn

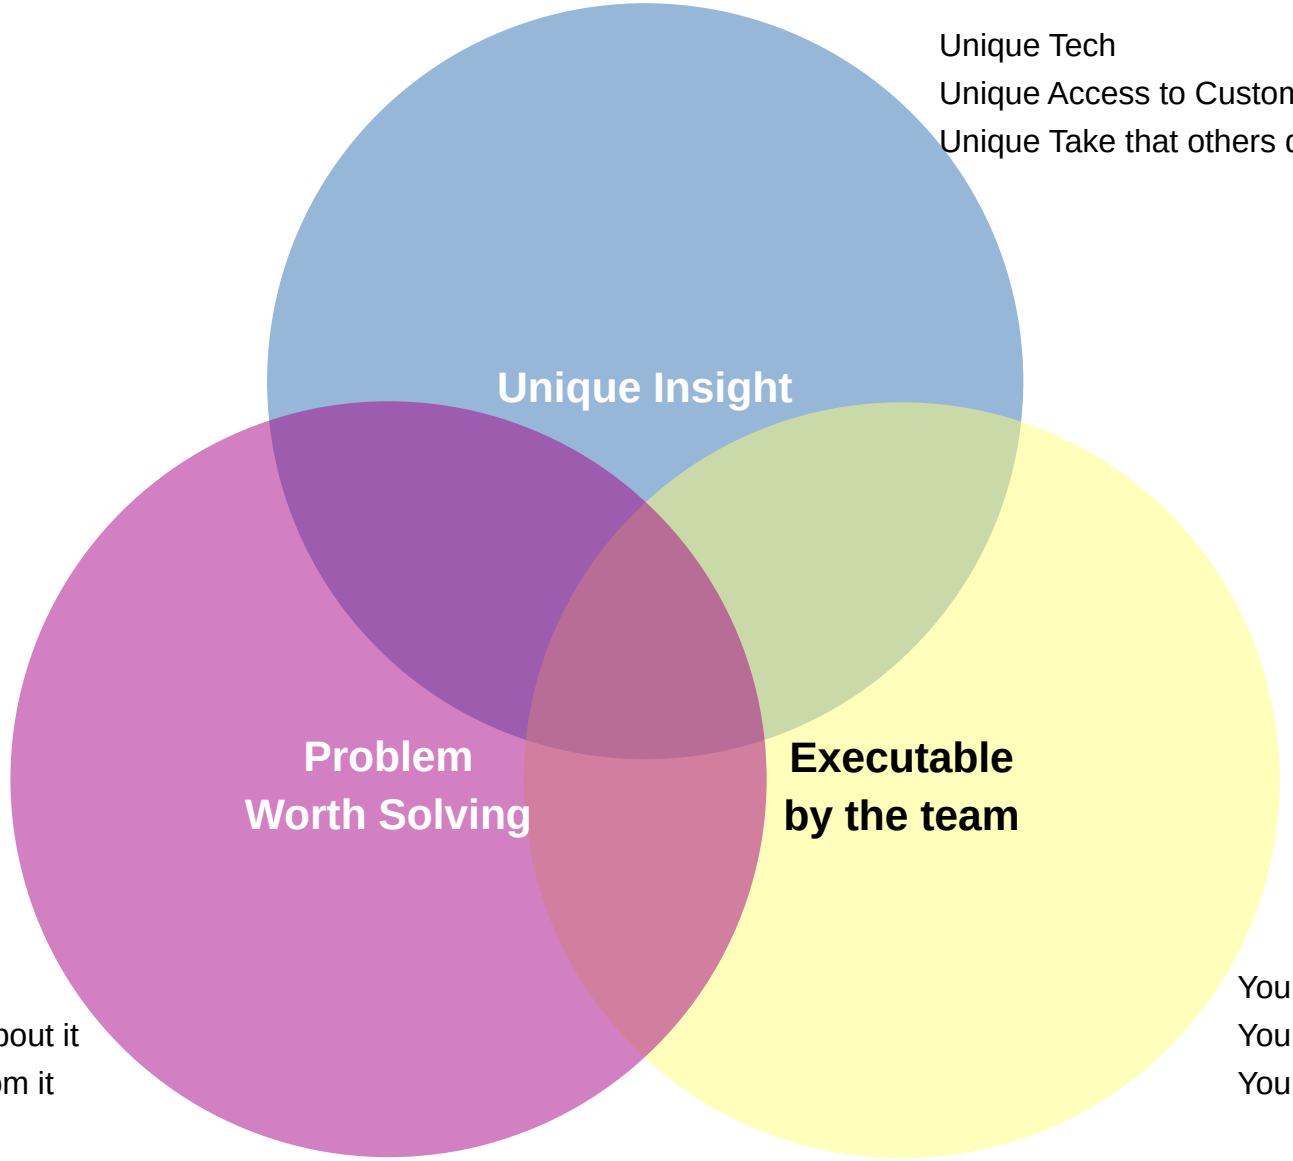

What matters more than the idea:

1. Your ability to iterate fast
2. Your obsession with the problem
3. Your team's ability to execute

A Tier-List of Startup Ideas

S (Moonshots)	
A (Unsexy Plumbing)	Complience automation for SMEs; Invoice Reconciliation
B (Crowded Trades)	AI Project Management Tool; Improving knowledge management; Ed-Tech platform for universities
C (Wrapper Zone)	Chat with your files; GPT Cover Letter Generator; AI Meal Planner
D (Tarpit Ideas)	Apps to help you find places in new cities; Fitness trackers & Health apps; Social media for nieche audience; Language Learning App but with AI
F	Fridge Inventory App; Uber for dog walking

A Problem you want to have

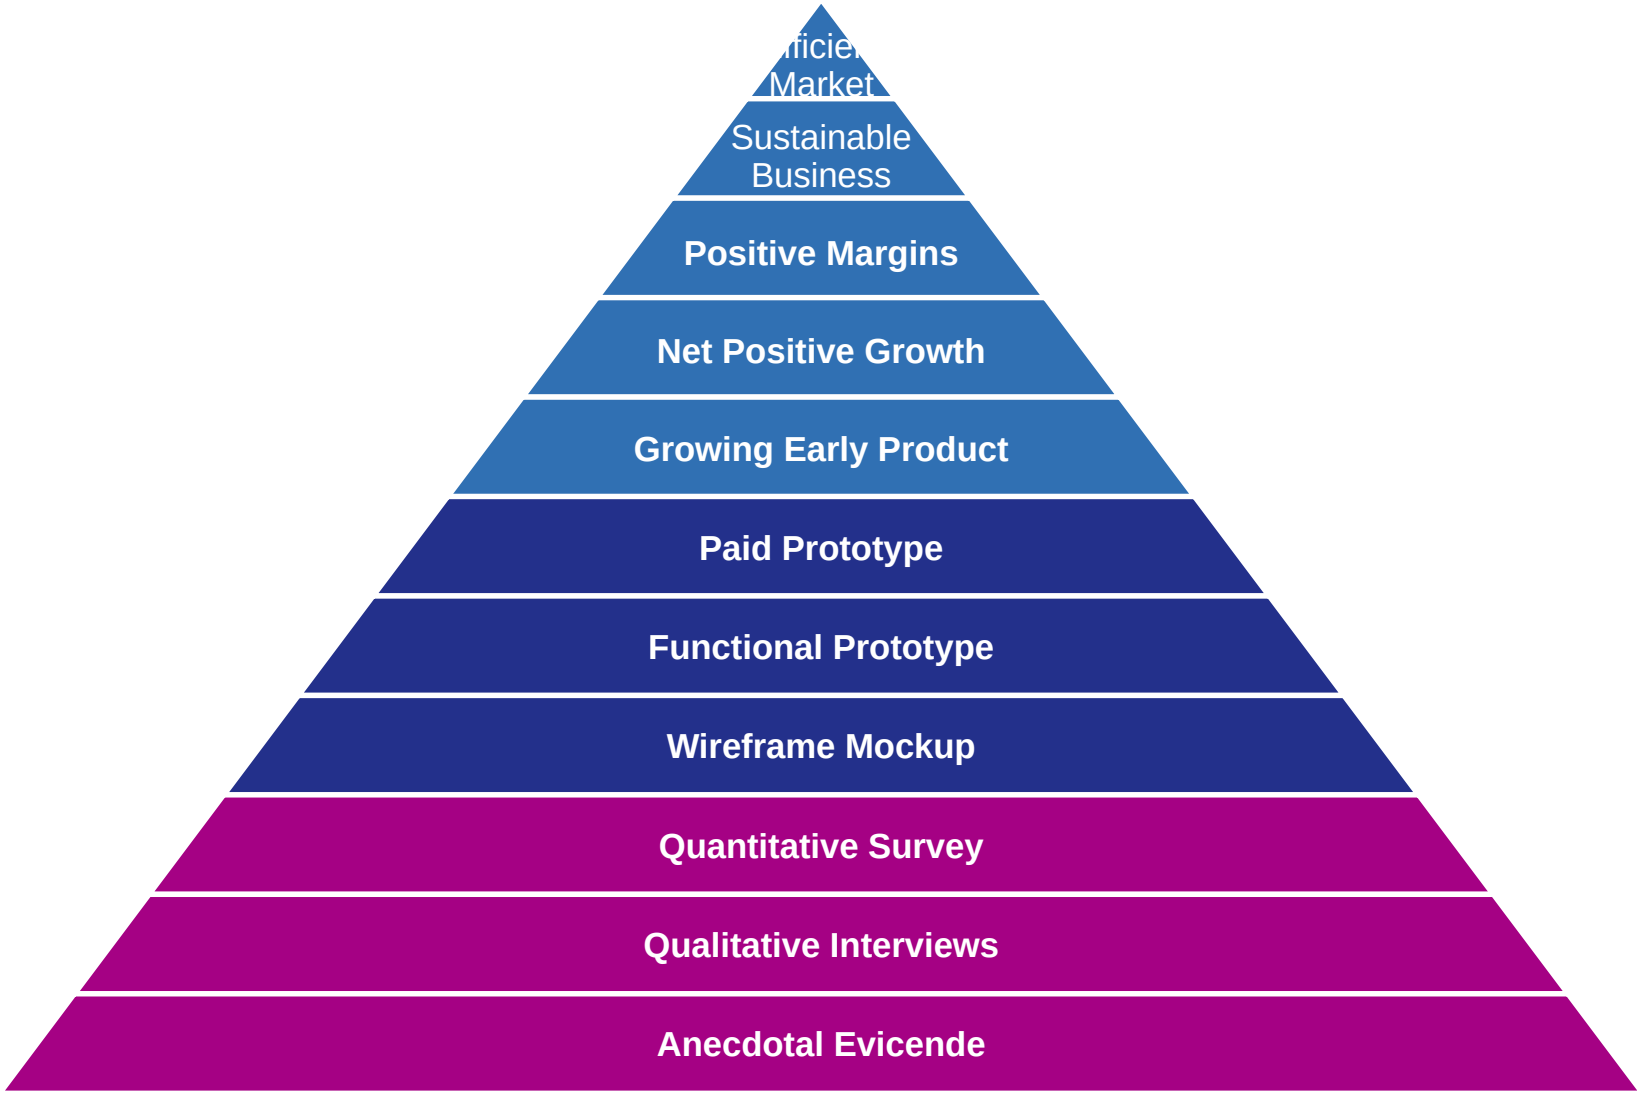

Unique Tech
Unique Access to Customers
Unique Take that others don‘t have

You are passionate about it
Your audience is passionate about it
You can make a good living from it

You can scale the product
You can scale the backend
You can scale the sales

Hirarchy of evidence in the lean startup

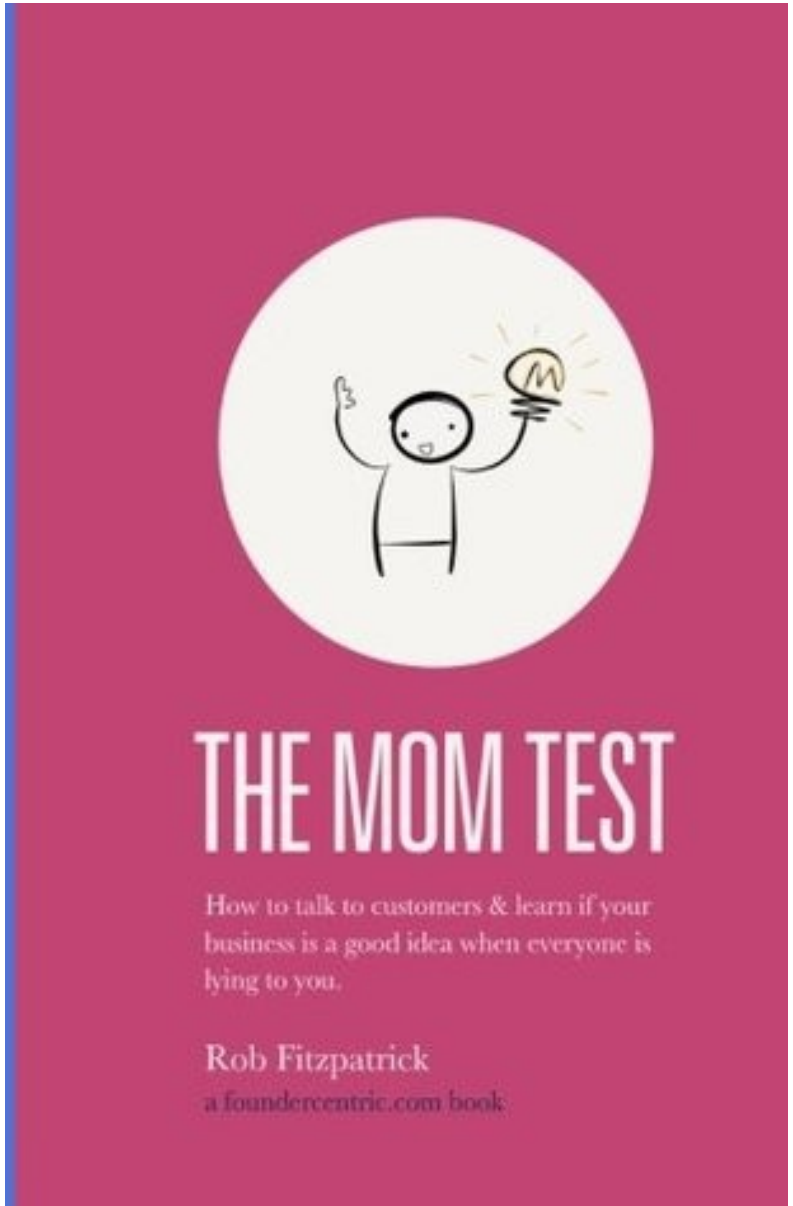

Acceleration Phase

Incubation Phase

Ideation Phase

A reference to have in mind

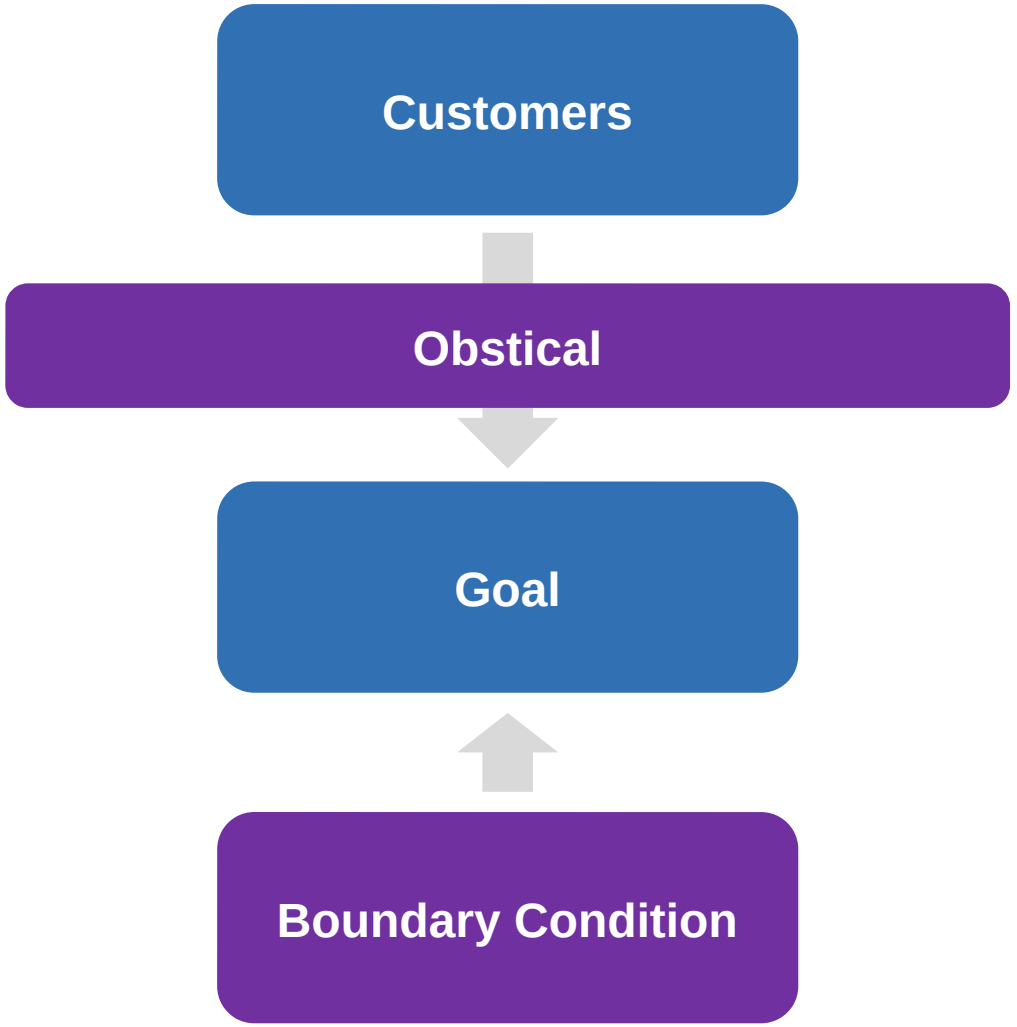

Core principles:

- It is about getting information instead of confirmation
- A customer interview is not a sales pitch
- Ask questions about the past instead of the future
- Phrases such as ‘could you’ of ‘would you’ should be avoided
- Ask for specific examples

Great questions to ask

- What’s the hardest part about ….
- Tell me about the last time you encountered that problem…
- Why was this hard?....
- How have you tried to solve this problem?....
- What do you not love about the solutions that you have tried?...

What you should have an idea about by now

Who are you addressing for and why?

What hinders them from solving their problem?

Why is a solution desirable for them?

What other factor need to be considered?

But how can we do them all?

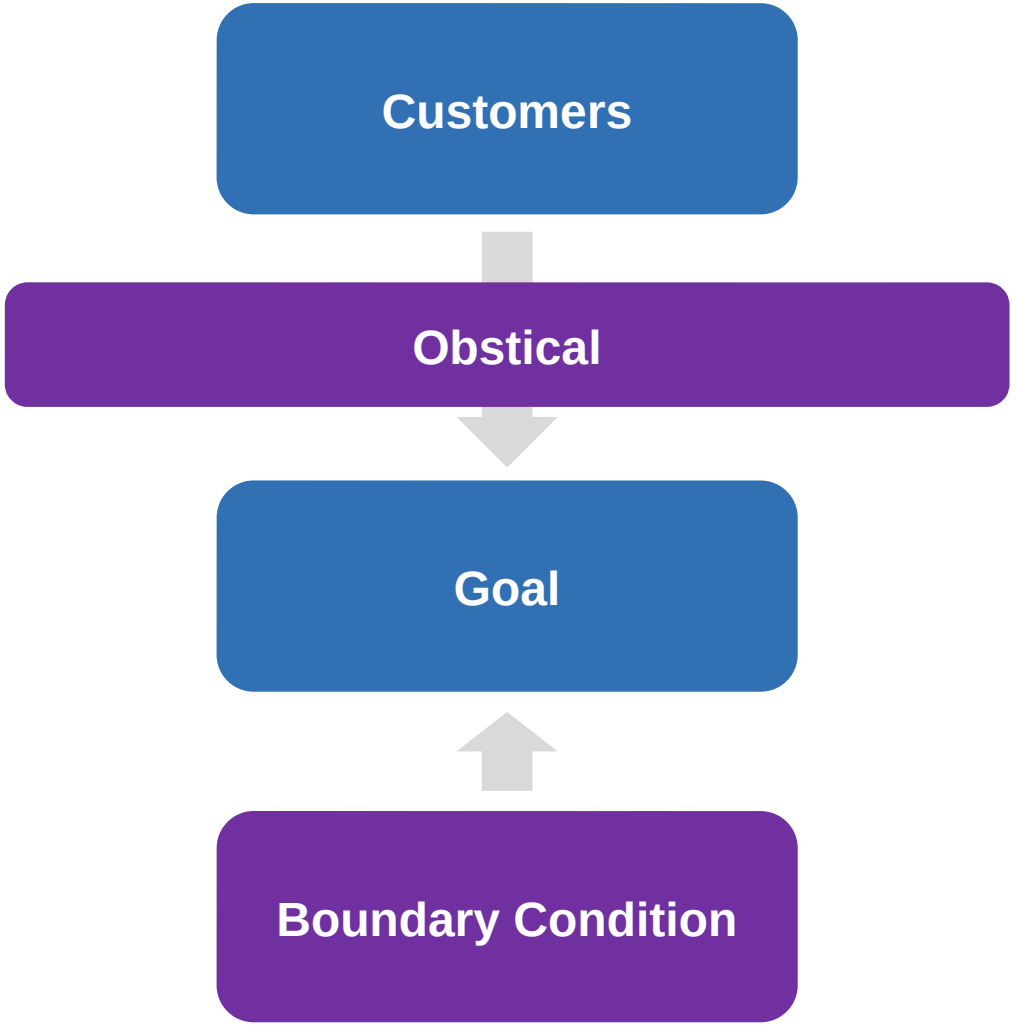

□ → **Tech** Validation

❤ → **Opportunity** Validation

□ → **Problem** Validation

⬆ → **UI** Validation

Which **must** you get right to solve your problem best?

CORE CONCEPT

Problem Space vs. Solution Space

PROBLEM SPACE

Where you should live

- **WHO** has this problem? (Specific customer segment)
- **WHAT** is their goal? (What are they trying to achieve?)
- **WHY** is it hard? (What obstacles block them?)
- **WHEN** does it hurt most? (What's the trigger moment?)

SOLUTION SPACE

Too early to live here

- ✗ Features, technology, design
- ✗ Shiny new things that excite YOU

⚠ **90% of founders jump here too fast**

Spend 10x more time in the problem space than you think you need.

FRAMEWORK

Jobs-to-be-Done: "Hire" Products

> People don't buy products. They **HIRE** products to do a job.

⚙ Functional

What the product literally does for me

♥ Emotional

How it makes me feel

□ Social

How others see me when I use it

The Drill Example

"I need a drill"

Surface request

→

"I need a hole"

Functional job

→

"I want to hang a picture"

Real goal

→

"I want to feel at home"

Emotional job

Christensen, C. (2016). Competing Against Luck. Harper Business.

VALIDATION LEVELS

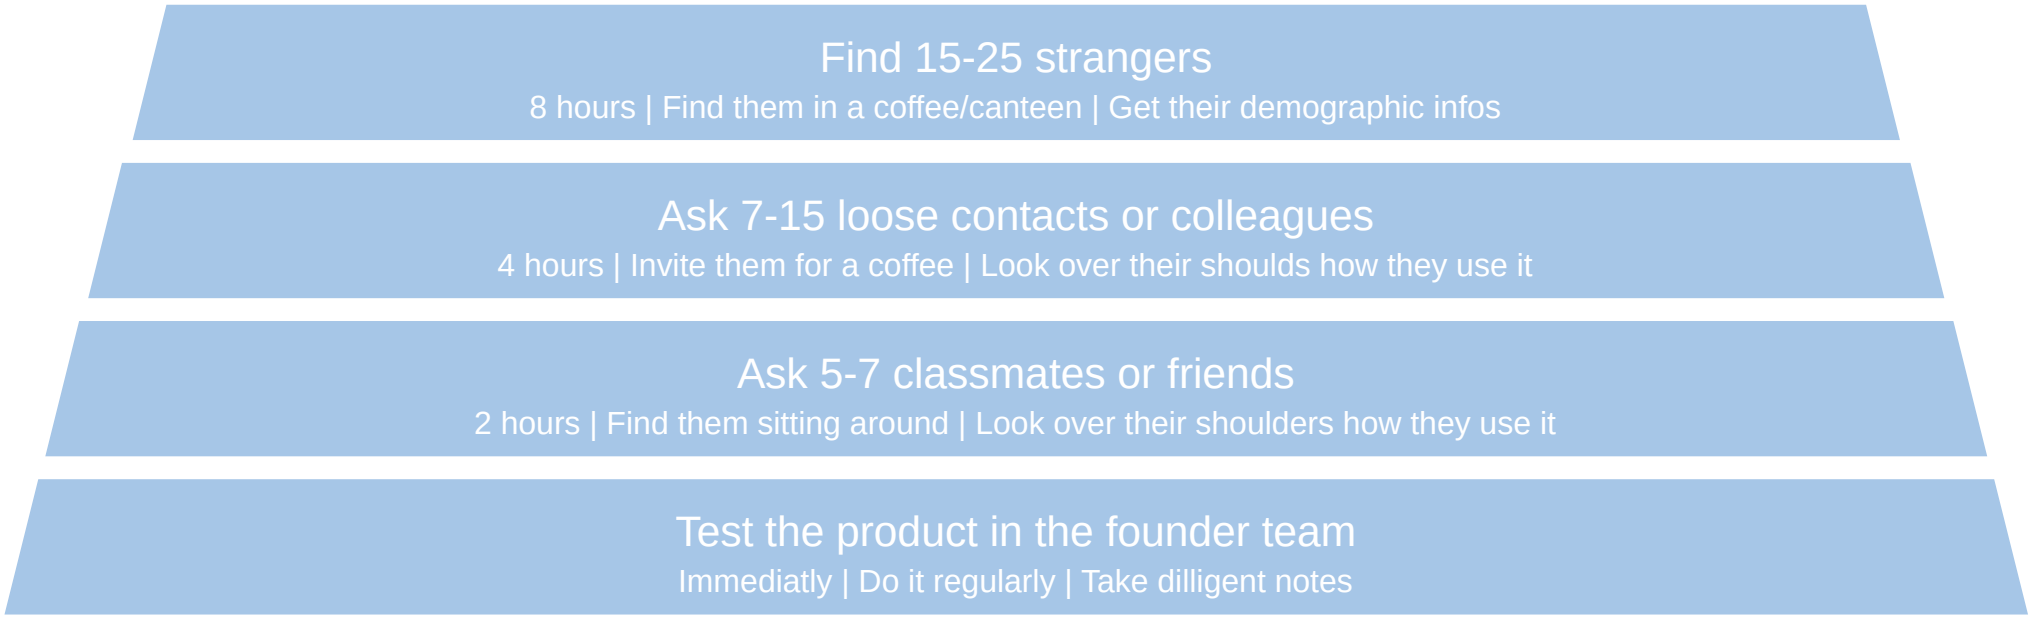

Hierarchy of Evidence

5	**Repeat Usage & Referrals**	*Users come back and bring others*	**Product-market fit**
4	**Payment**	*"Here's my credit card"*	**Strong signal**
3	**Commitment**	*"I'll try it / give you my email"*	**Medium signal**
2	**Interest**	*"Tell me more when it's ready"*	**Weak signal**
1	**Opinions**	*"I think this would be useful"*	**Worthless**

Your goal this week: Get to Level 3+ with at least 5 potential customers.

Finding an Audience

- **Better done than perfect:** Use who you can find, even if they are not your perfect customer
- **Know your customers:** B2B goes to canteens, B2C sit in cafees, when do they have 10 mins
- **Give first, take second:** Offer them a beverage or snack for their time
- **Set yourself a target:** Don‘t leave before you spend at least 10 minutes with at least 7 people
- **Always follow through:** Never leave a loose end

Speed matters

Get out of the building to get every day at least **7 interactions**

Why Validation Matters

42%

of startups fail because no market need

CB Insights, 2023

70%

of new products fail within the first year

Harvard Business Review

10x

cheaper to fix problems before building

Steve Blank

"Fall in love with the problem, not the solution." — Uri Levine, Waze founder

The Validation Mindset

Shift from confirmation to discovery

CONFIRMATION MODE	DISCOVERY MODE
✗ "Let me prove my idea is great"	✓ "Let me learn what's true"
✗ Asking leading questions	✓ Asking open questions
✗ Ignoring negative signals	✓ Celebrating negative signals
✗ Building first, asking later	✓ Testing before building

Goal: Find reasons your idea WON'T work (before you waste months building it)

Hierarchy of Evidence

Not all validation is created equal

5	**Paying Customers**	*Someone paid you money*	**Strongest**
4	**Letter of Intent**	*Written commitment to buy*	**Strong**
3	**Signup / Waitlist**	*Email or contact given*	**Medium**
2	**Qualitative Interviews**	*Deep conversations (n=5-10)*	**Weak**
1	**Anecdotal Evidence**	*"My friend said..."*	**Weakest**

Landing Page Validation

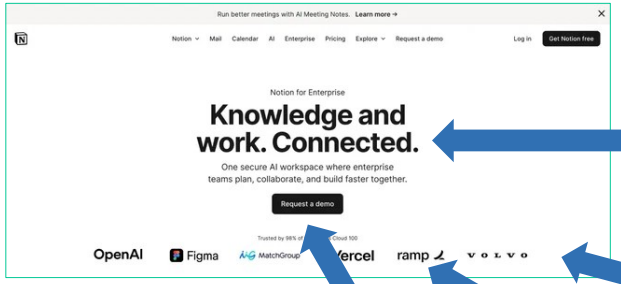

Scale your validation beyond 1:1 interviews

Traffic → **Landing Page** → **Signup** **= Validated Interest**

- ✓ Tests real behavior (not hypothetical "would you...")
- ✓ Scalable: reach 100+ people in days, not weeks
- ✓ Provides quantitative data (conversion rates)
- ✓ Forces you to articulate your value proposition

Benchmark: 5-10% signup rate = strong problem validation

So what does that look like

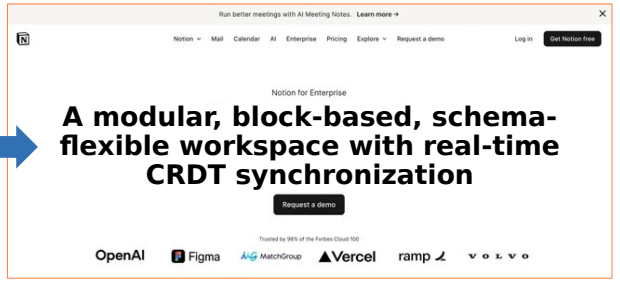

“Yes, Knowledge Management is a problem for us, too!“

No sign of actual produc

Psychological wizzardry

Call to Action – always Call to Action

What their German Engineer proposed

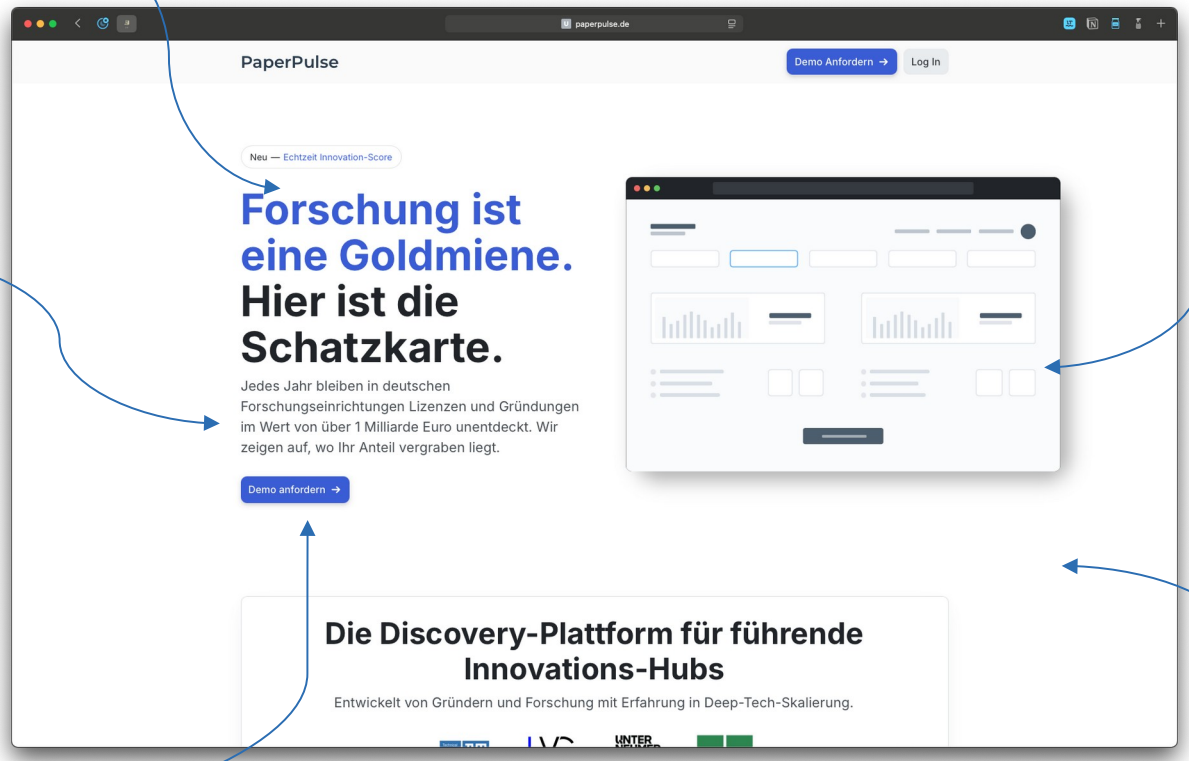

Building a Landing Page (in the problem space)

Attention Grabbing Pitch

What is the problem?

Why does it matter?

Who has the problem?

What do we loose?

What could we gain?

Authority

Social Proof

Commitment

Likeablity

Reciprocity

Call to Action

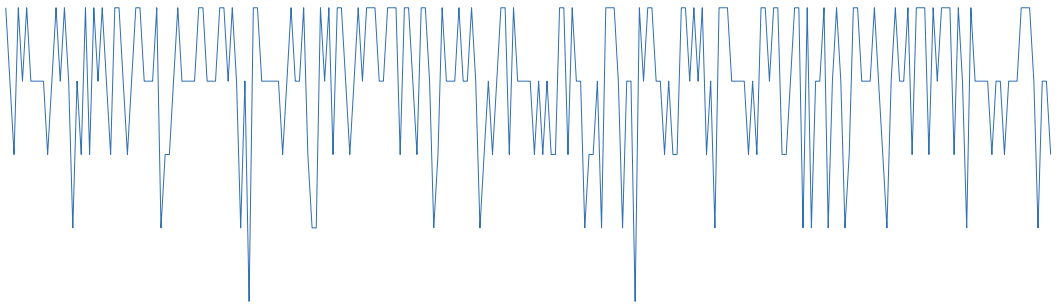

Let‘s jump in!

Time to reflect!

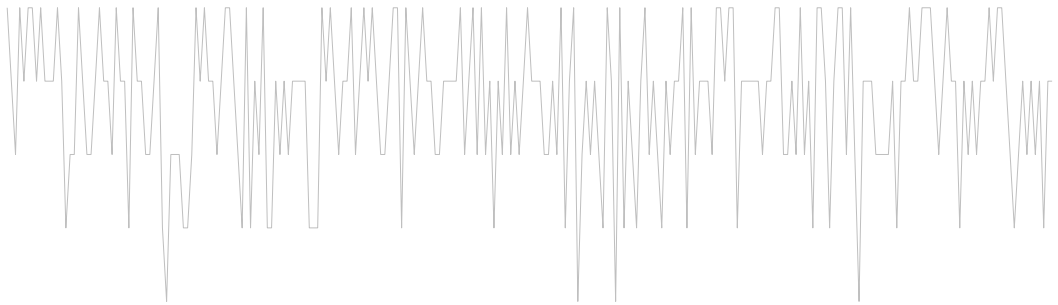

Be honest to yourself:

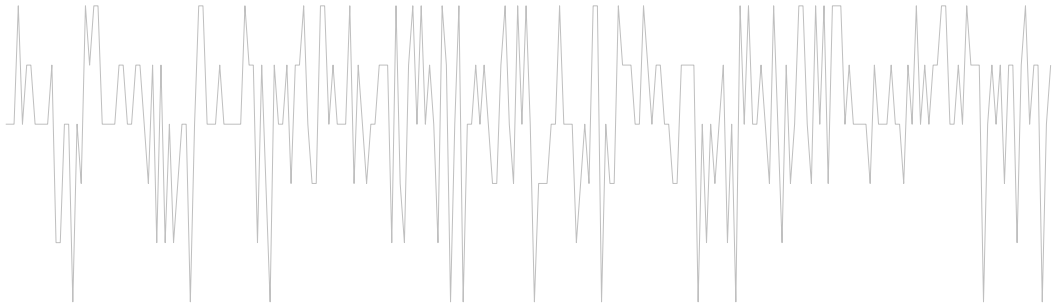

Right Product

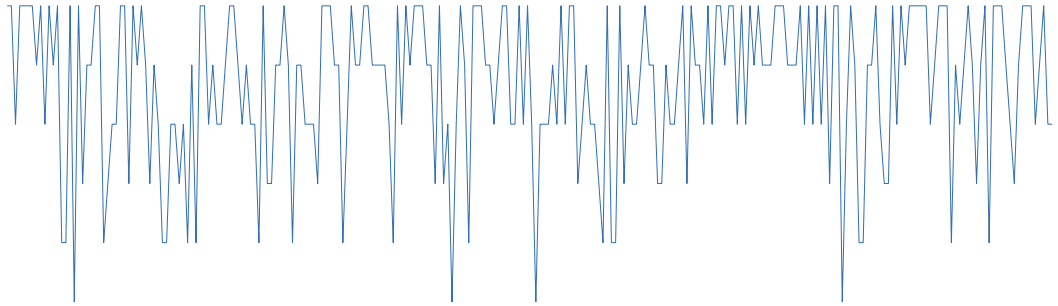

Right People

Right Investors

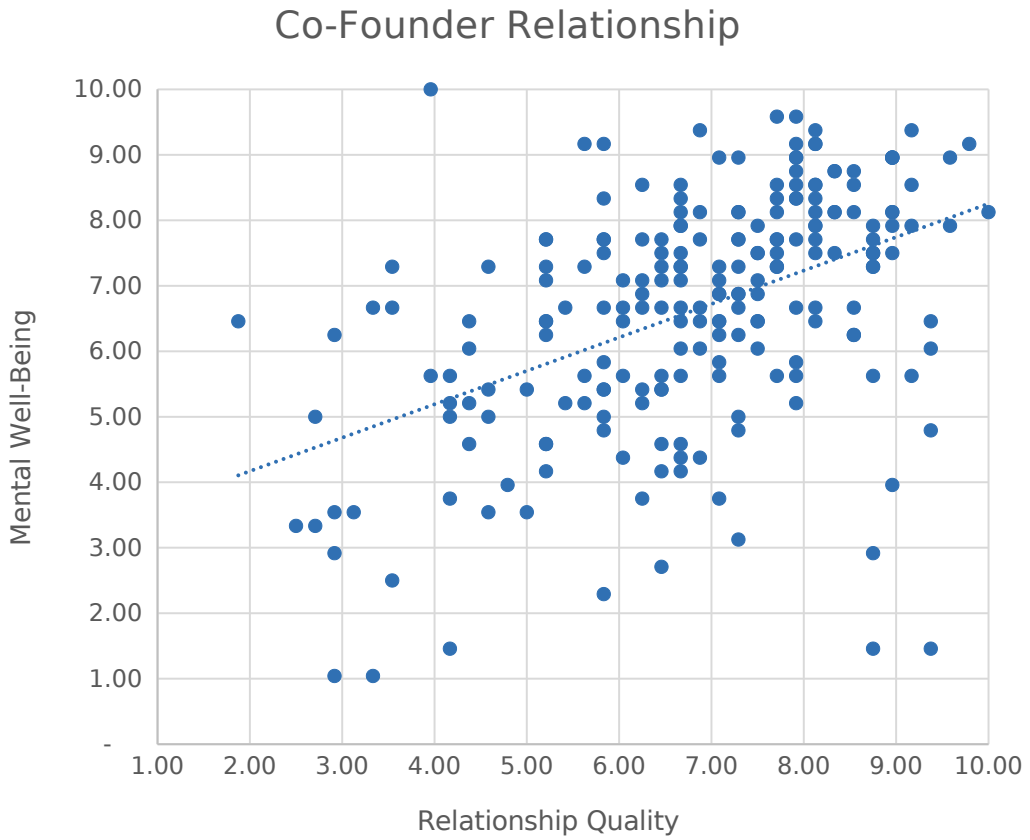

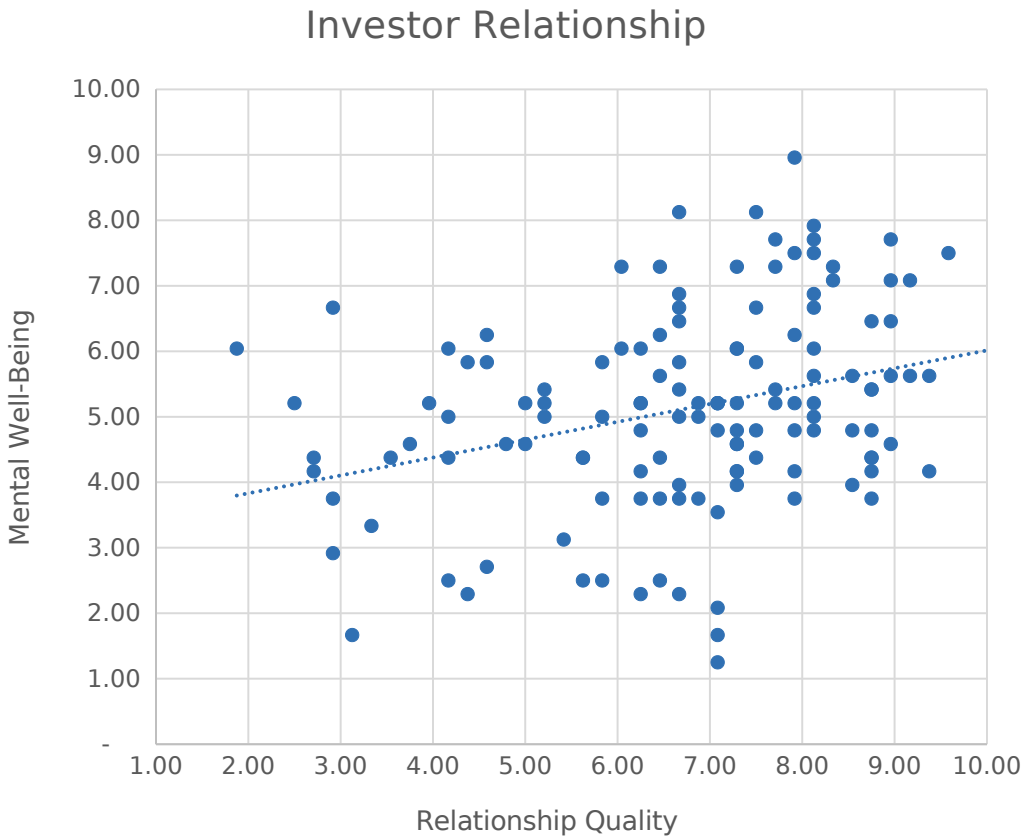

Right Founders

[10] Burger

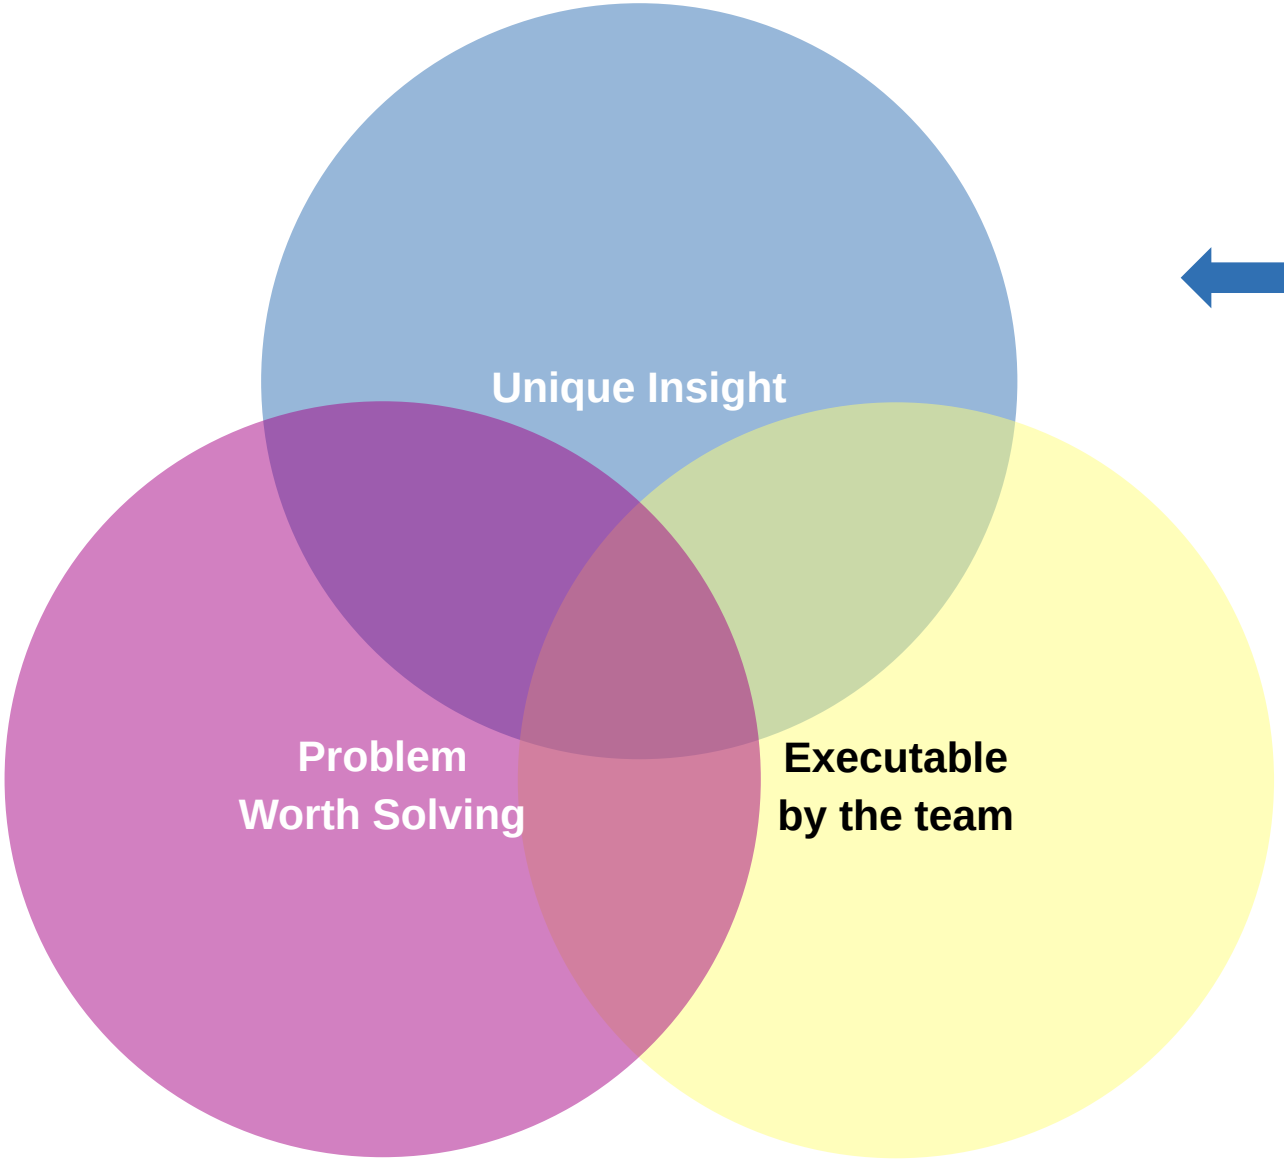

Be honest to yourself:

[10] Burger

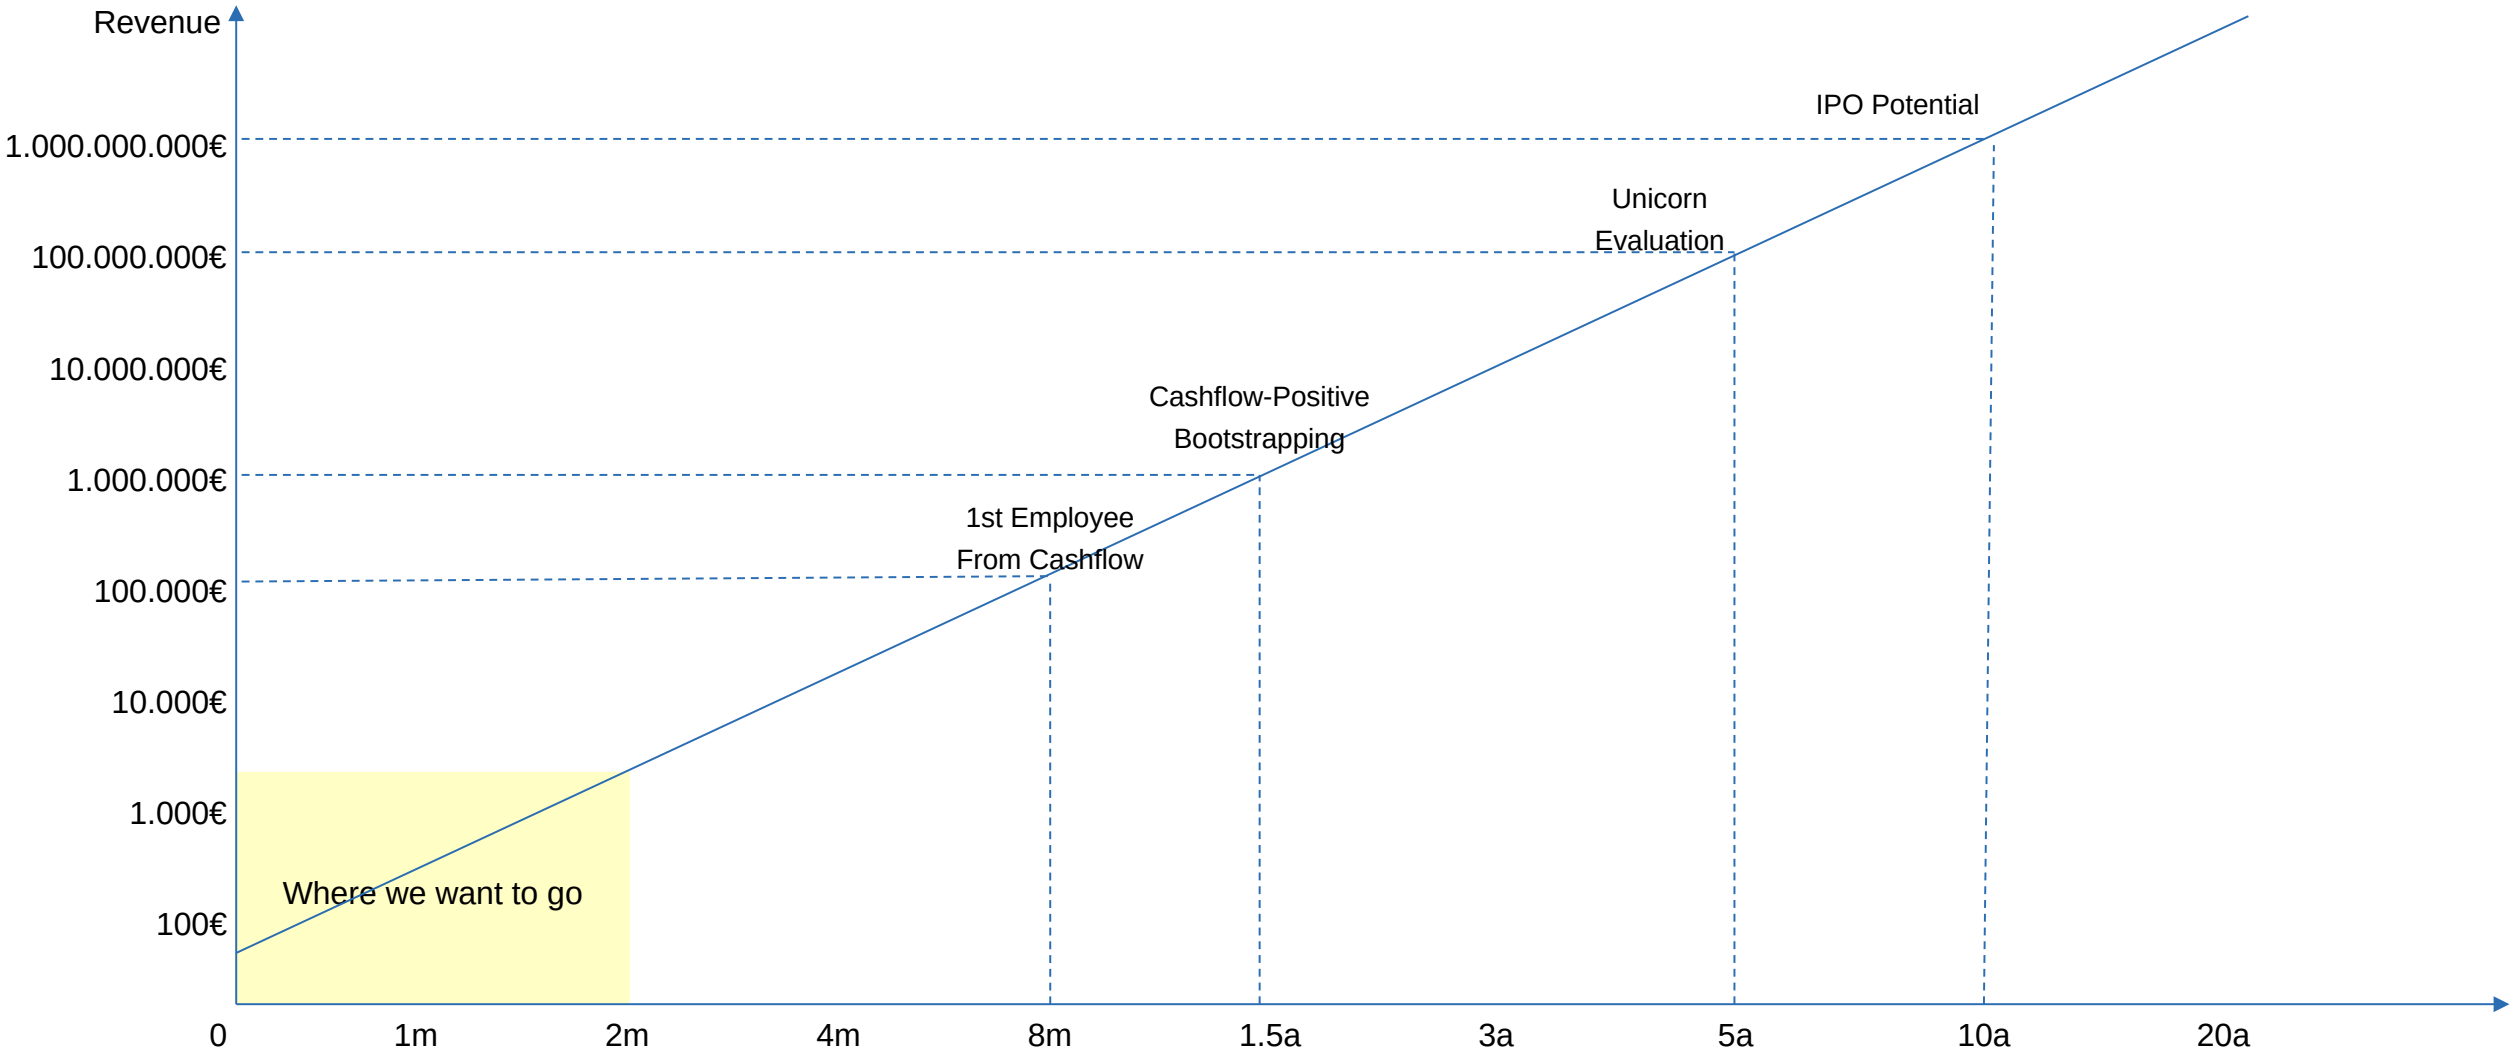

Do you feel confident about your pitch?

„We are looking for team, team, team, market, team.“
TechStarts (YC and a16z in similar words)

This is your early stage pitch!
Have it available in 1-3 sentences for the next months.

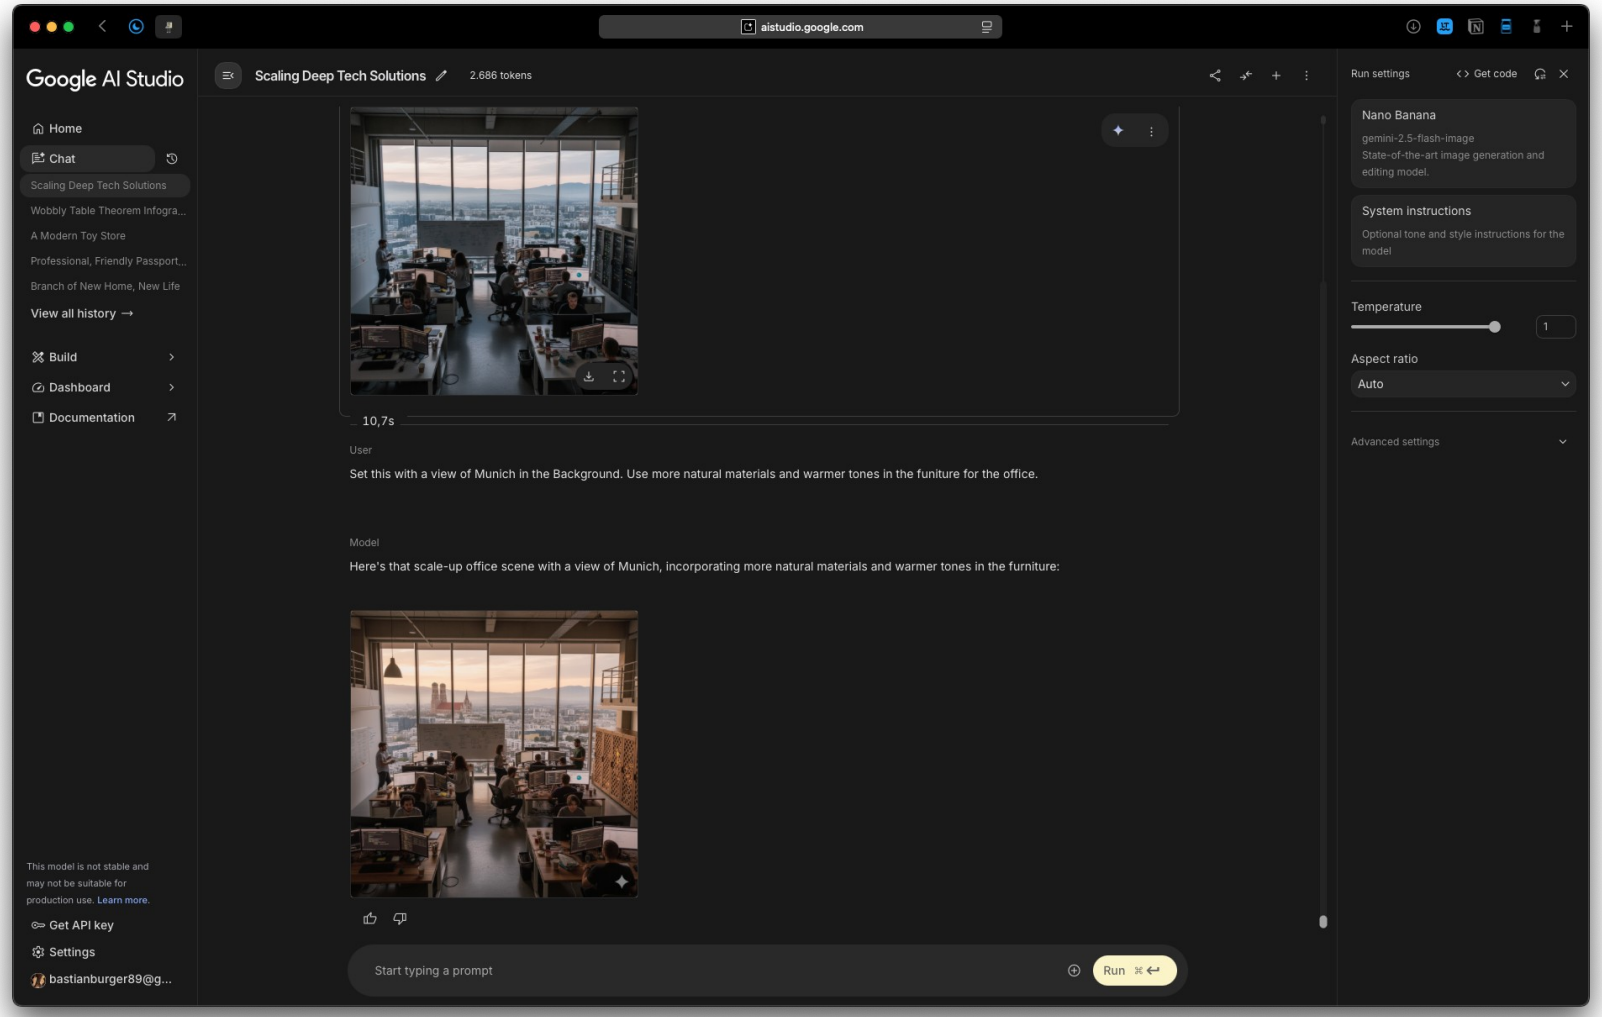

Can you do this for the long run?

Not scientific reason behind this chart

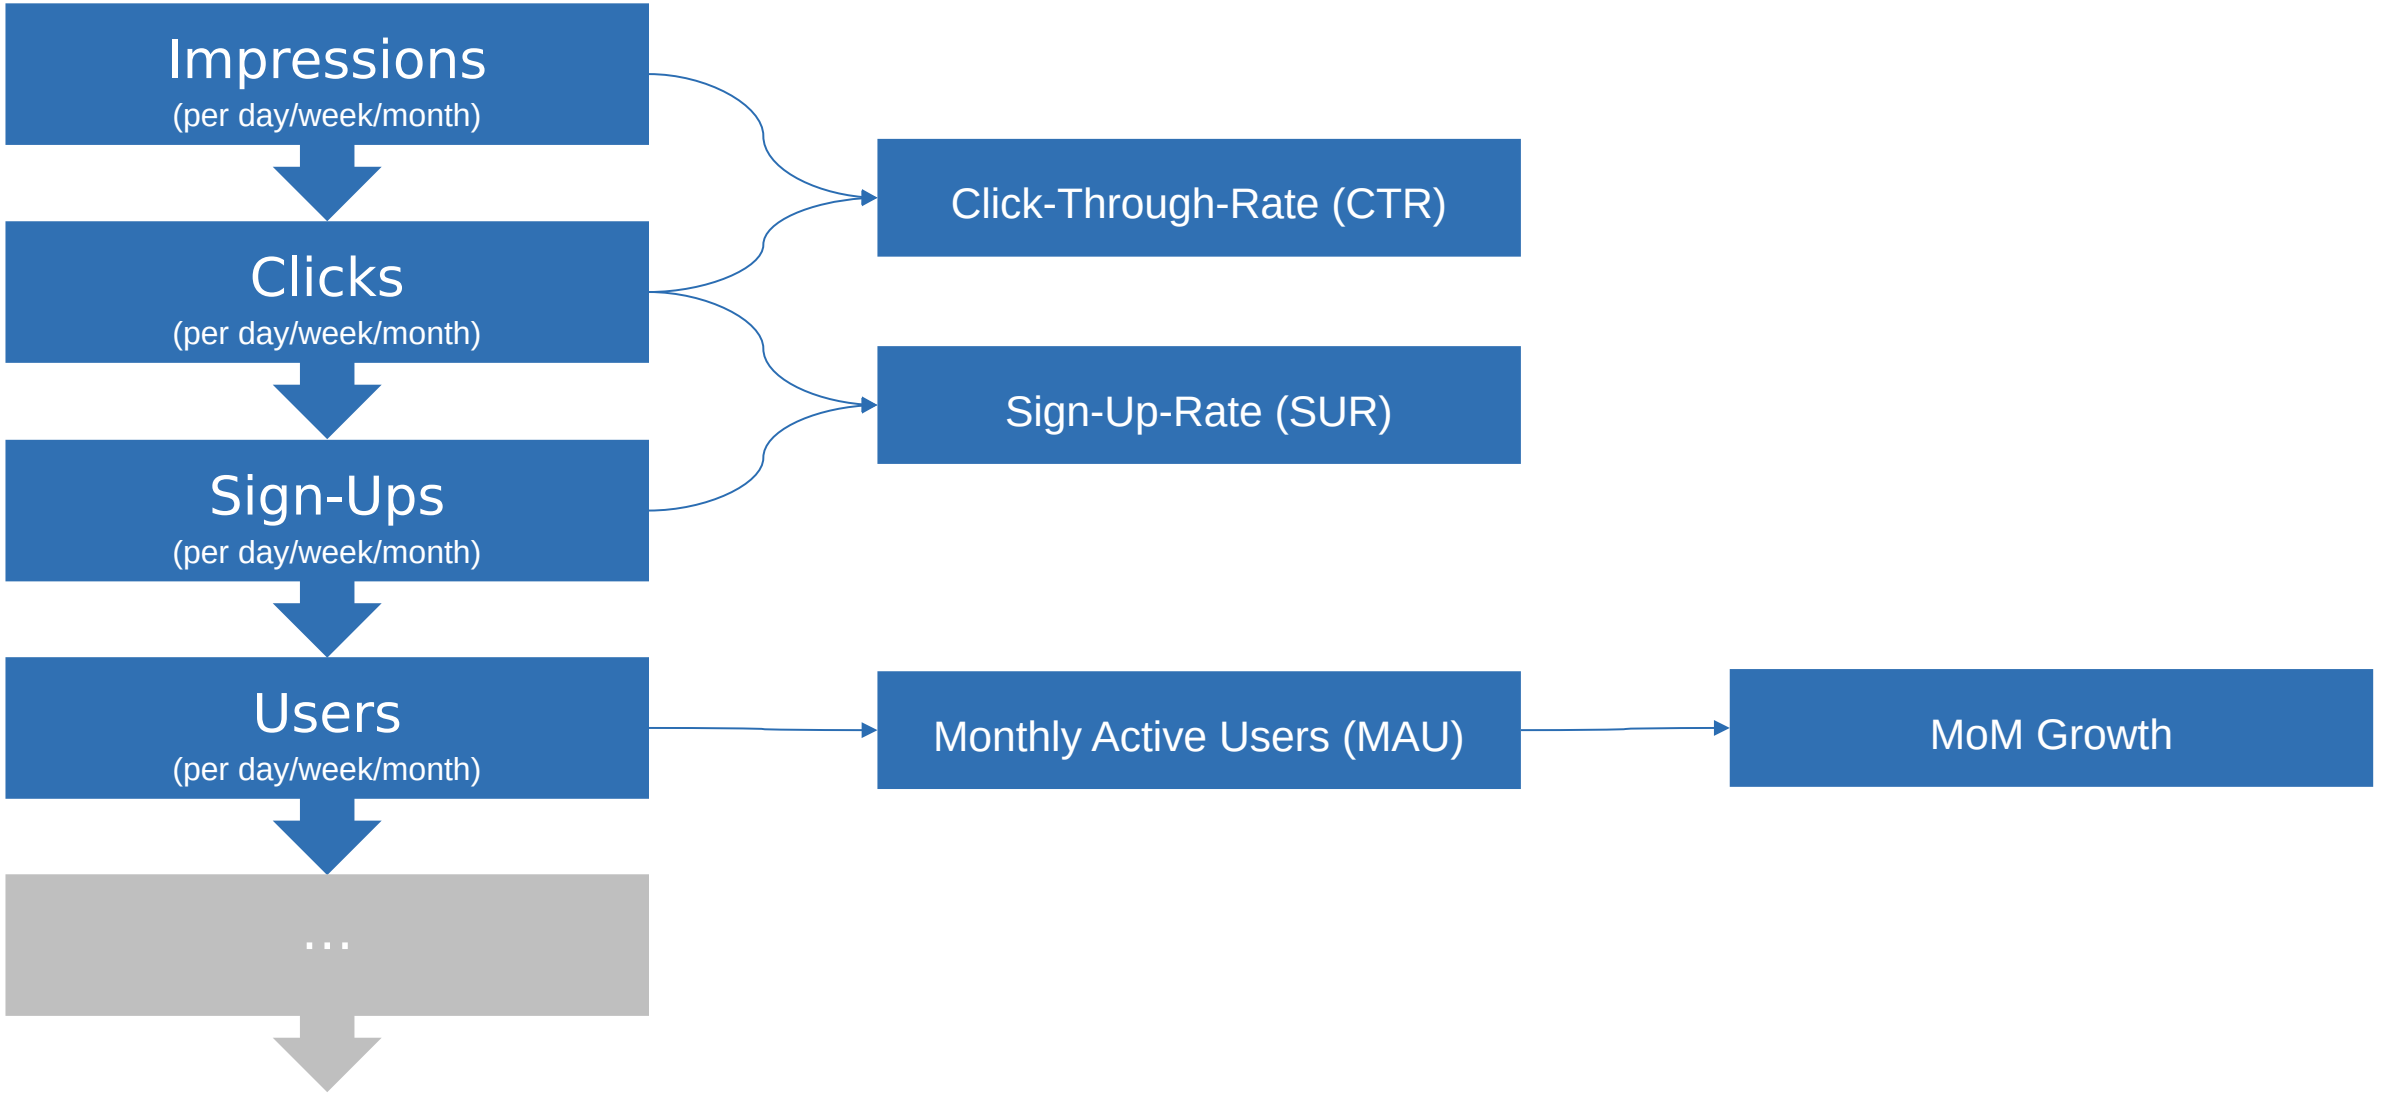

Will this be your office in 3-5 years?

Tipp: AI-Aided Manifestation ;)

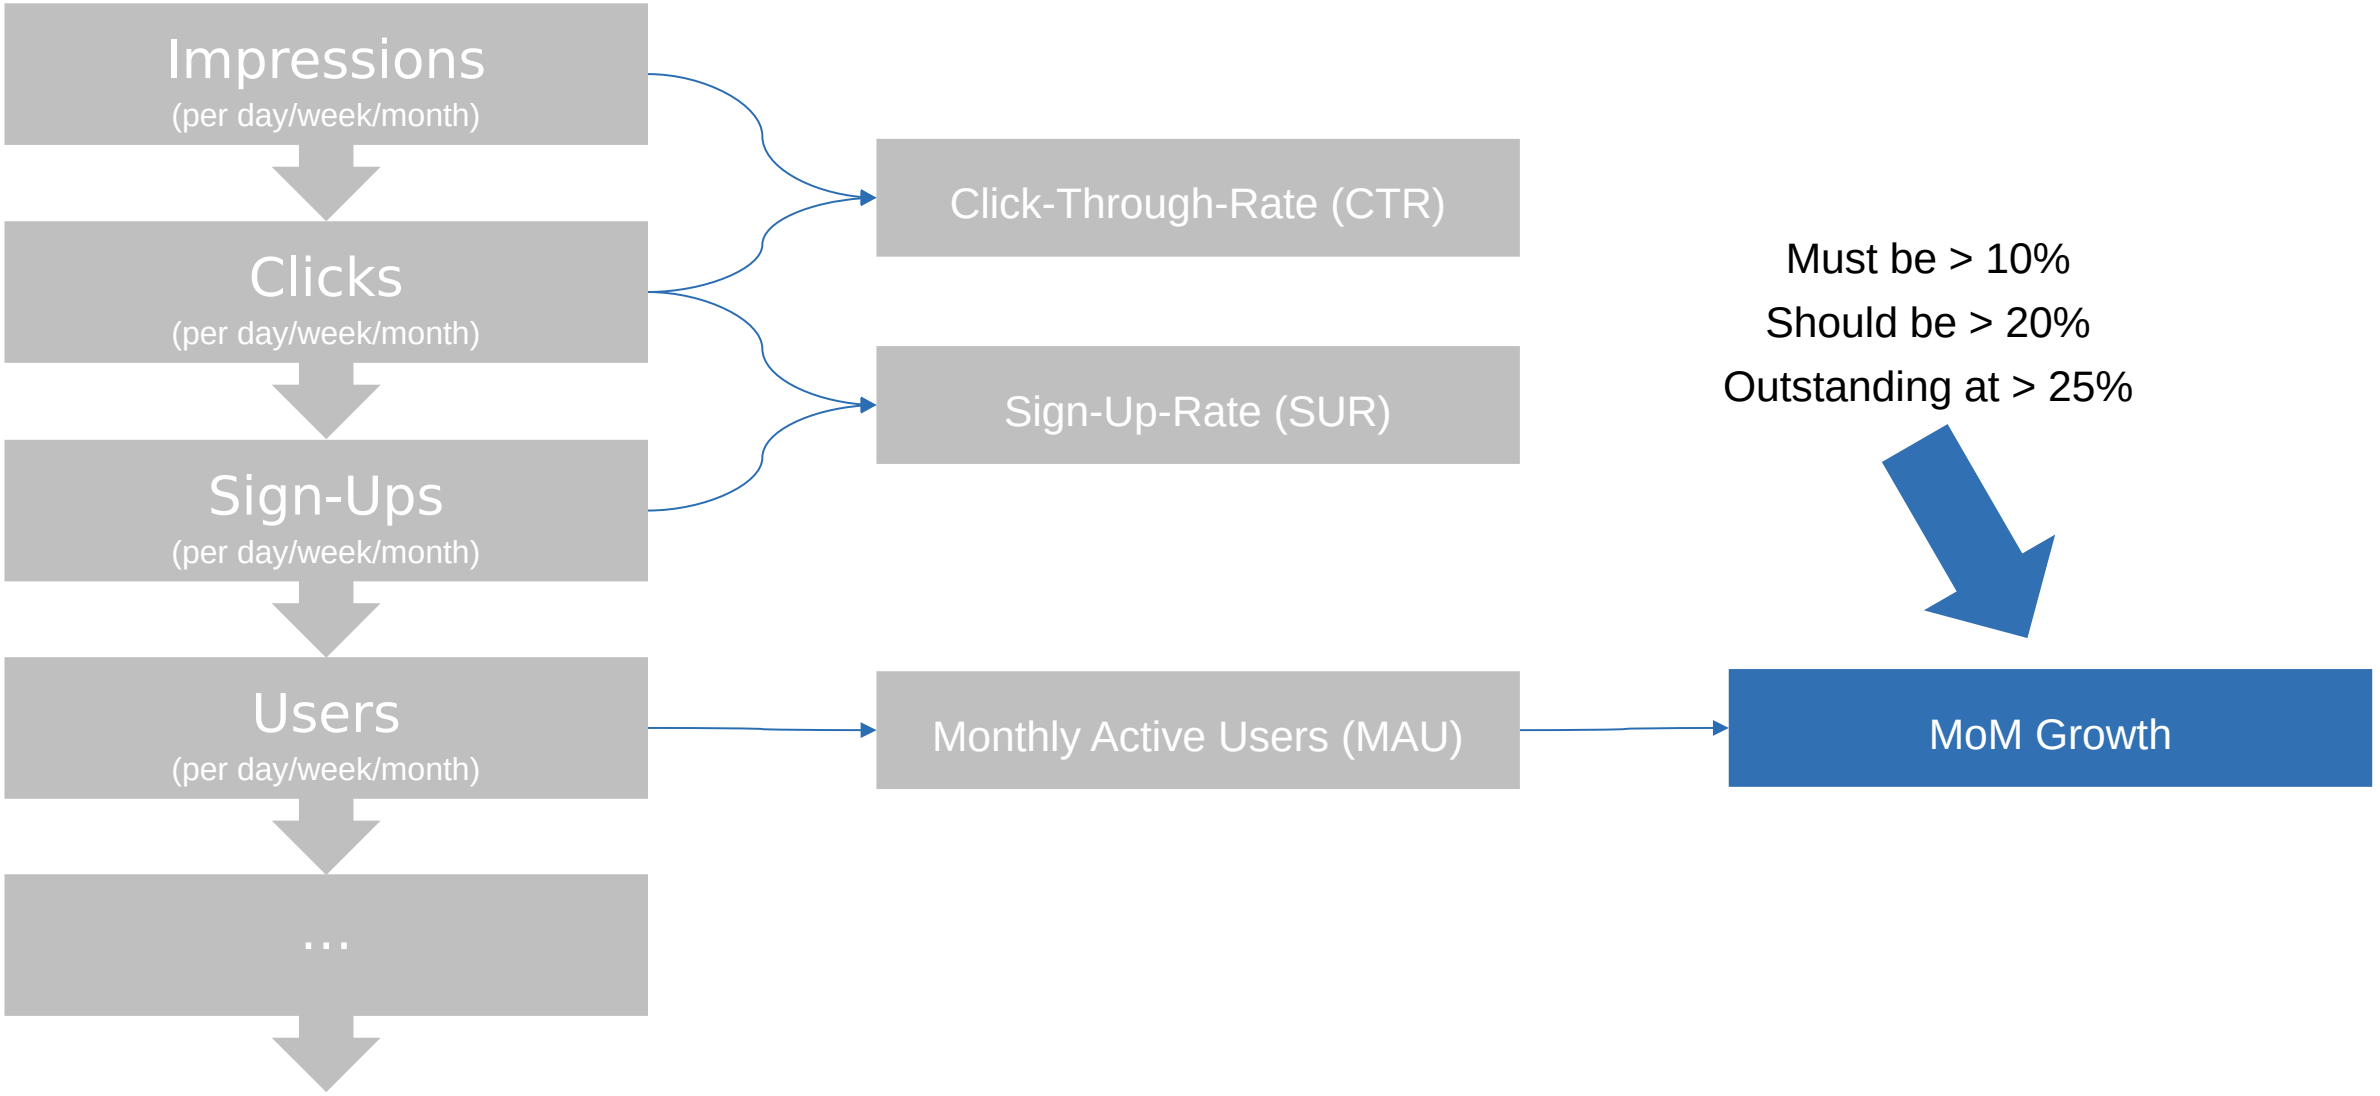

Let‘s jump in! Again!

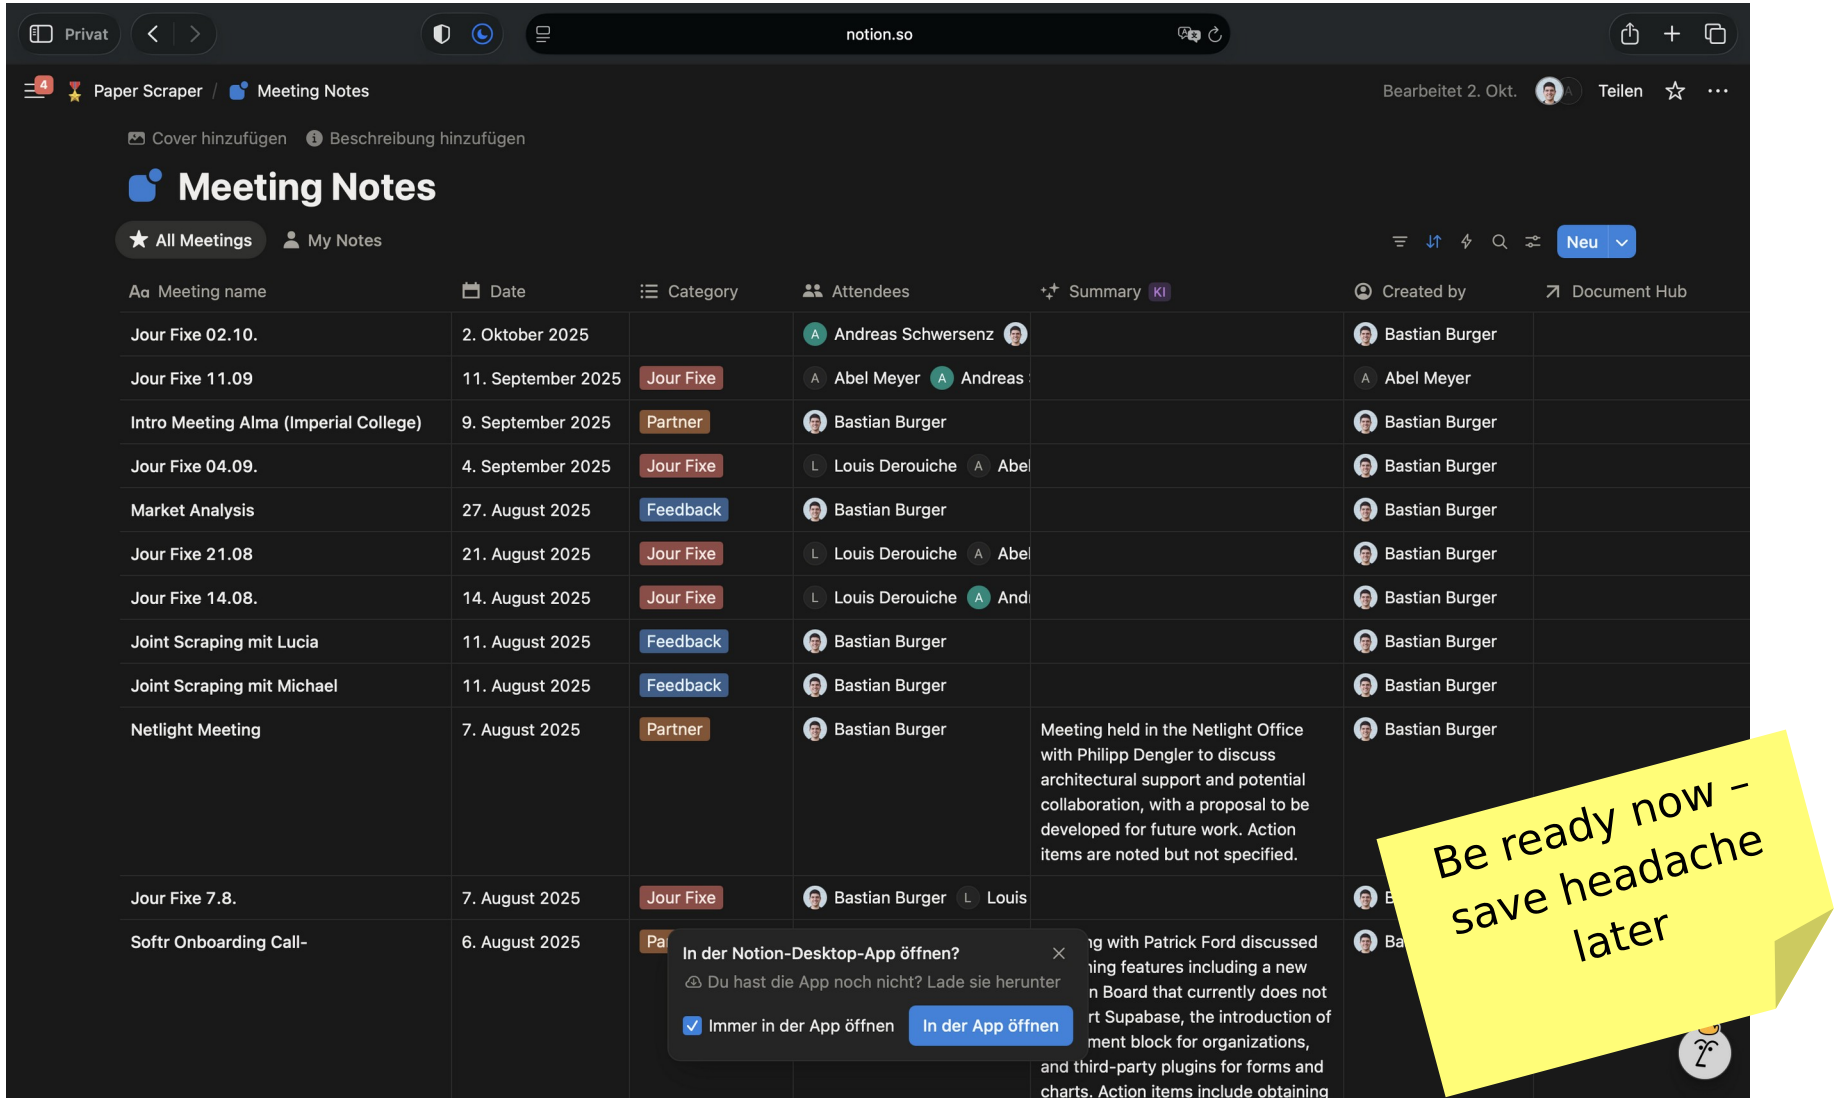

Know your numbers! (Seriously, always have them at your fingertips!)

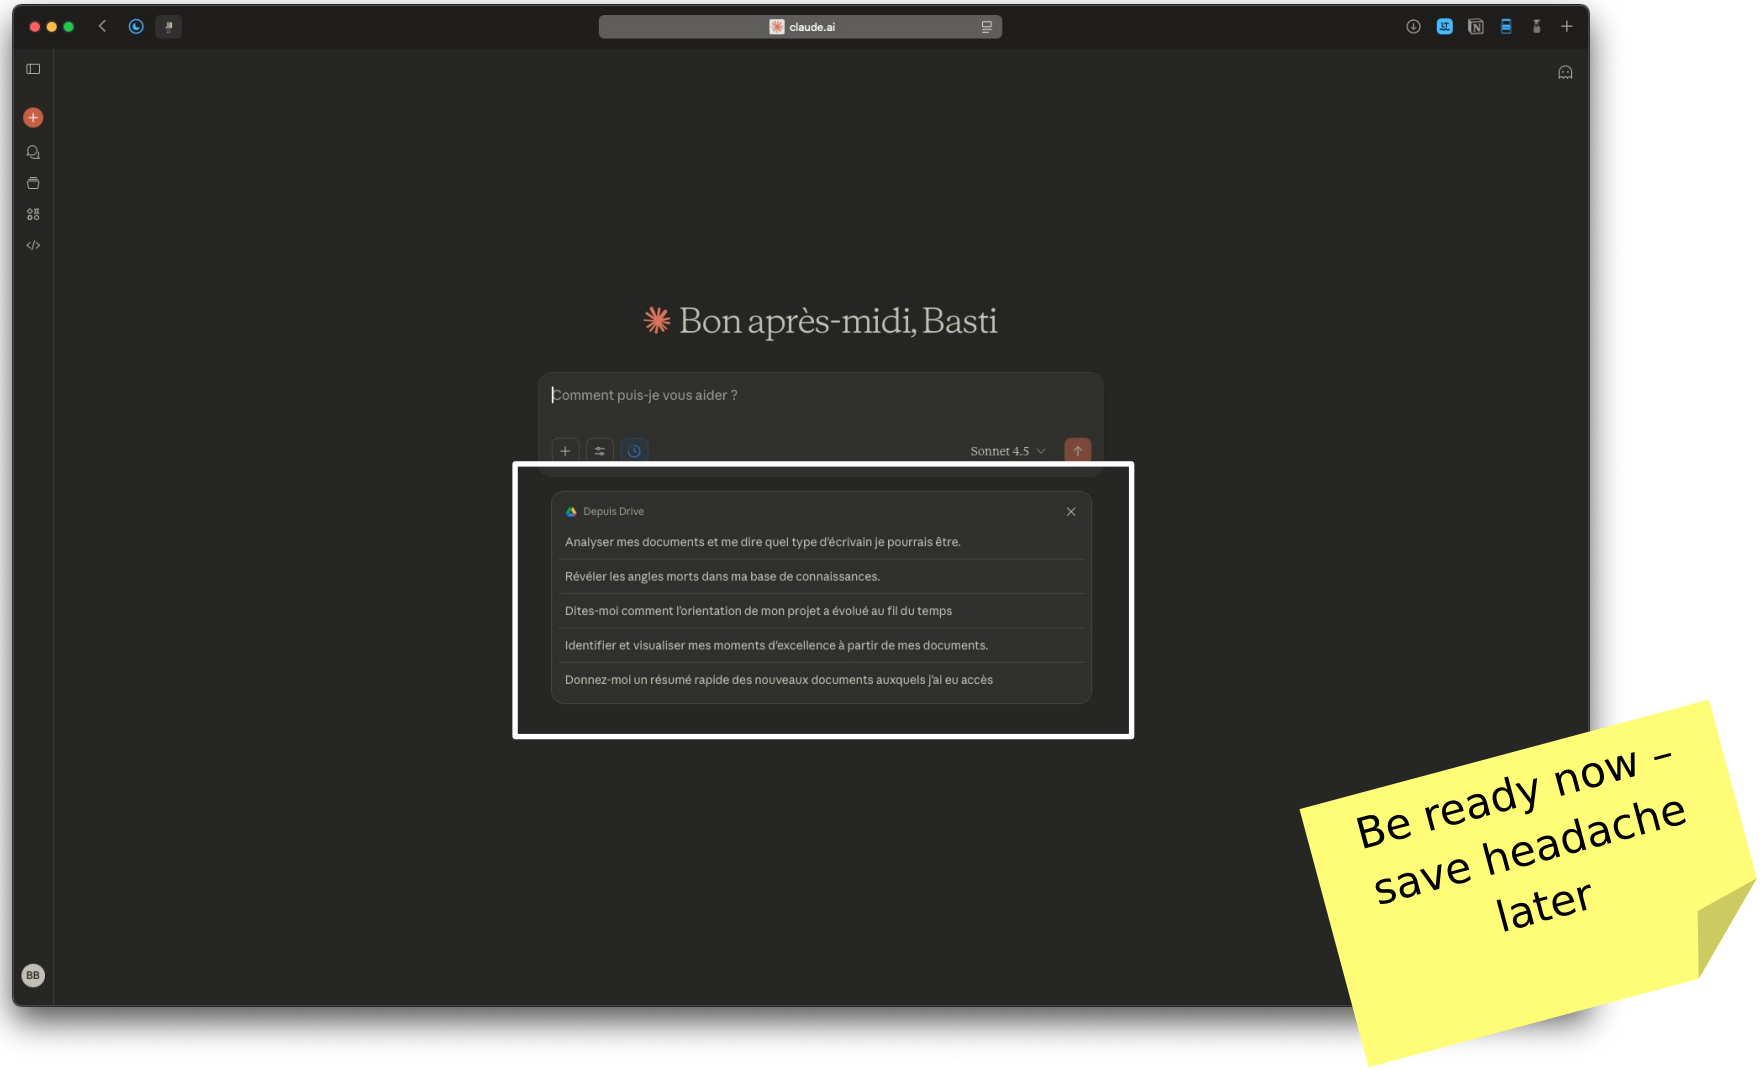

Are you sticky?

Manage your knowledge & progress

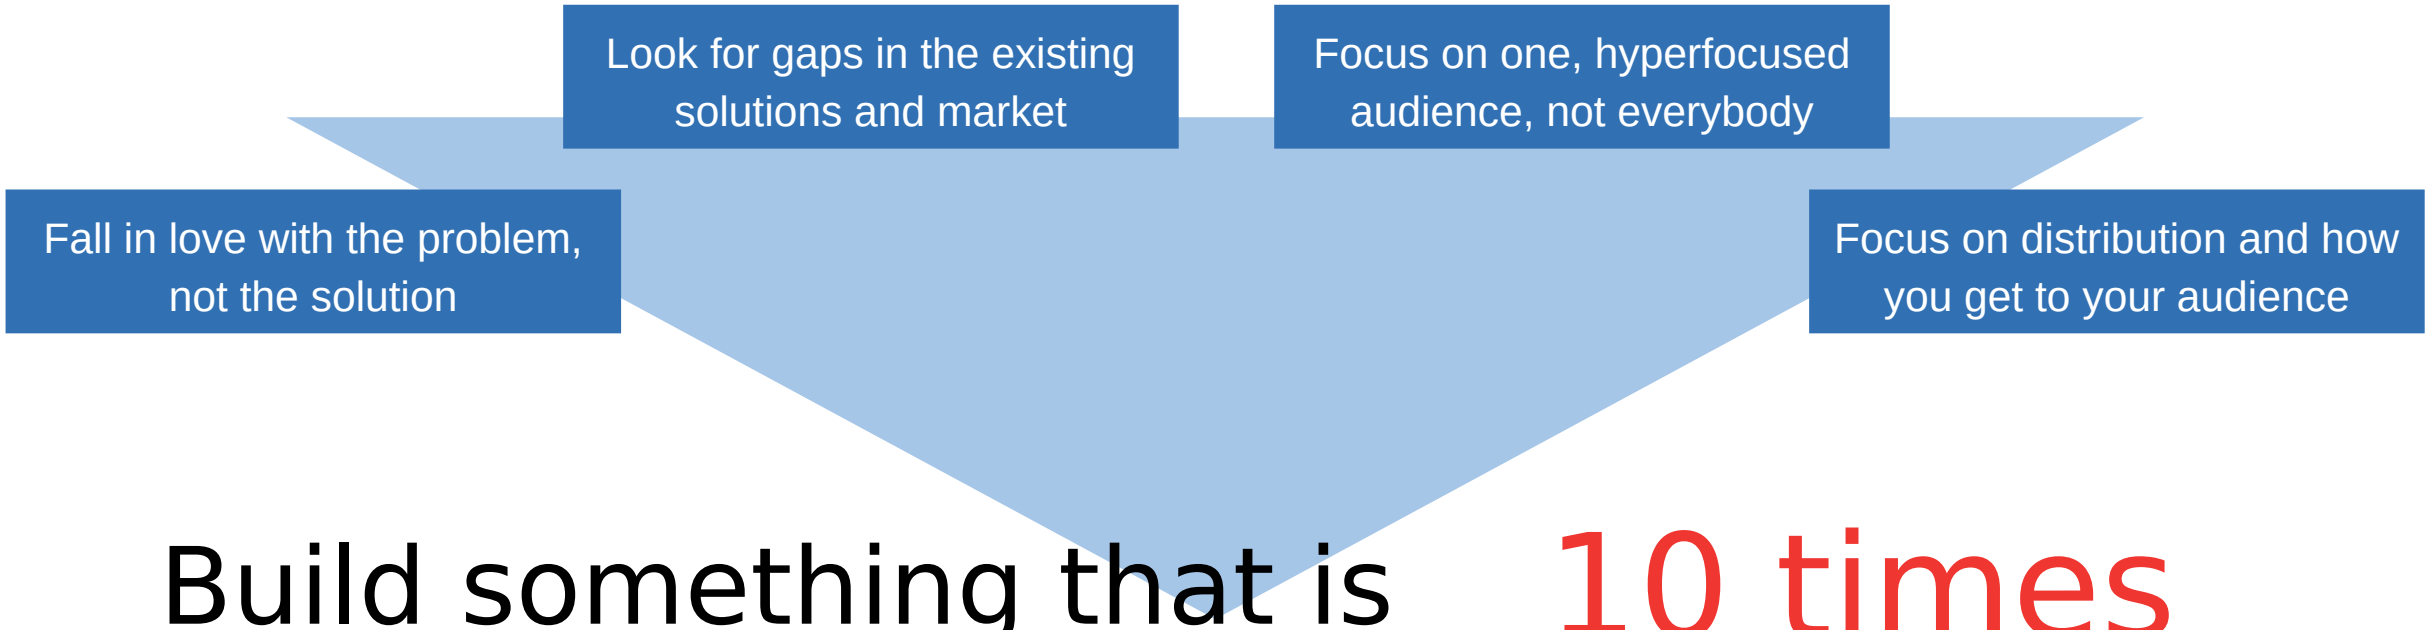

Every data-driven decision you made should be accountable

Deductive & Inductive Thinking

Core principles for problems and ideas

Build something that is 10 times better than what your users have now

Getting from General to specific

General idea:

Optimising HR workflows with AI.

➔ Not actionable

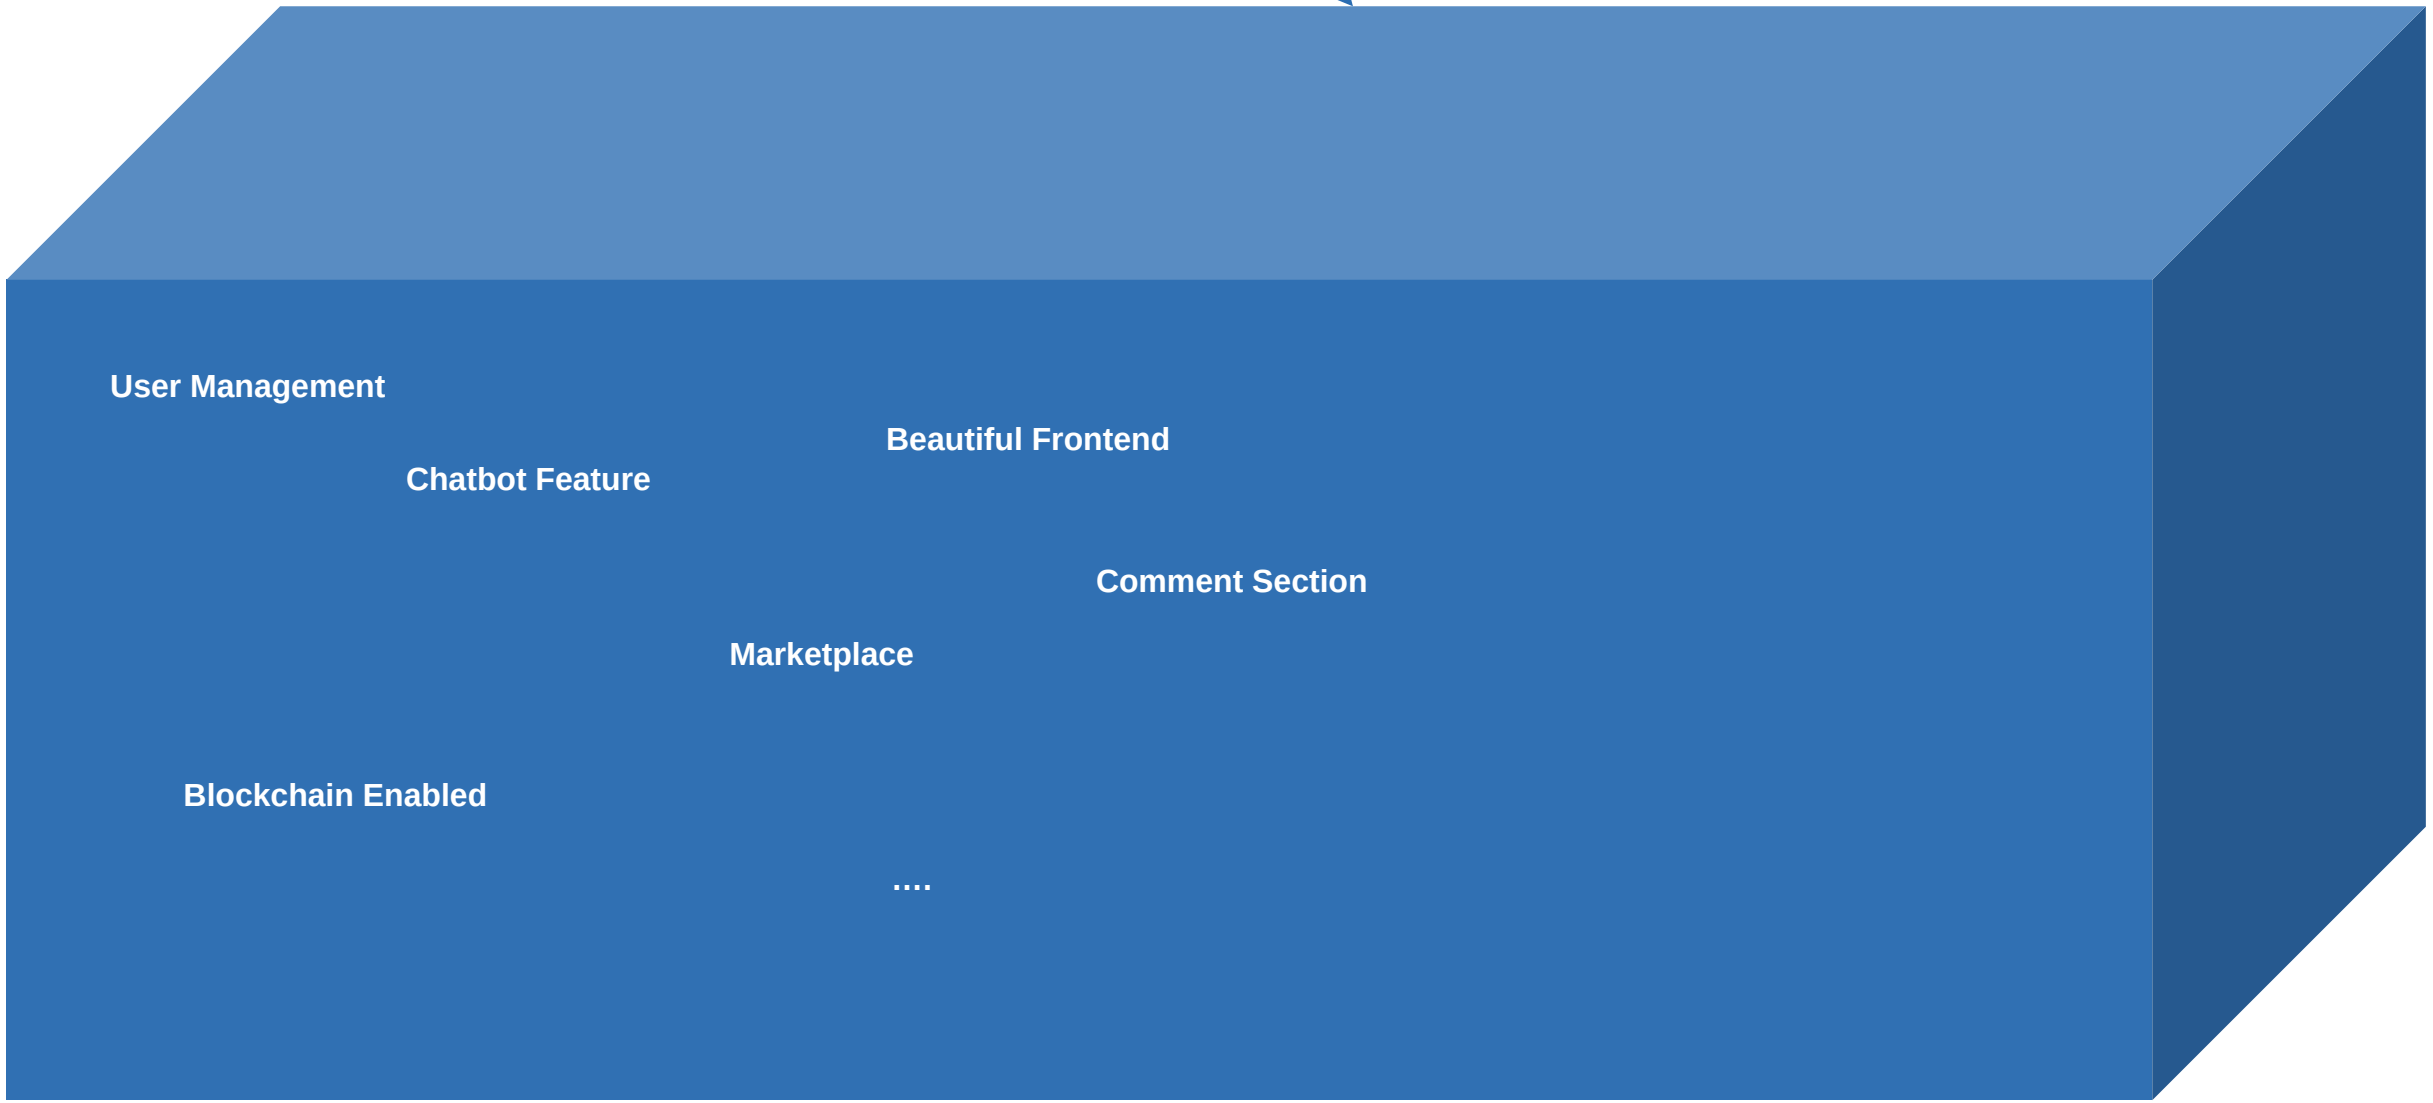

(The more specific an idea becomes, the more problems your users will find with it.)

Specific idea:

Software for recruiters to schedule video calls with applicants and departments.

➔ An Engineer can build this

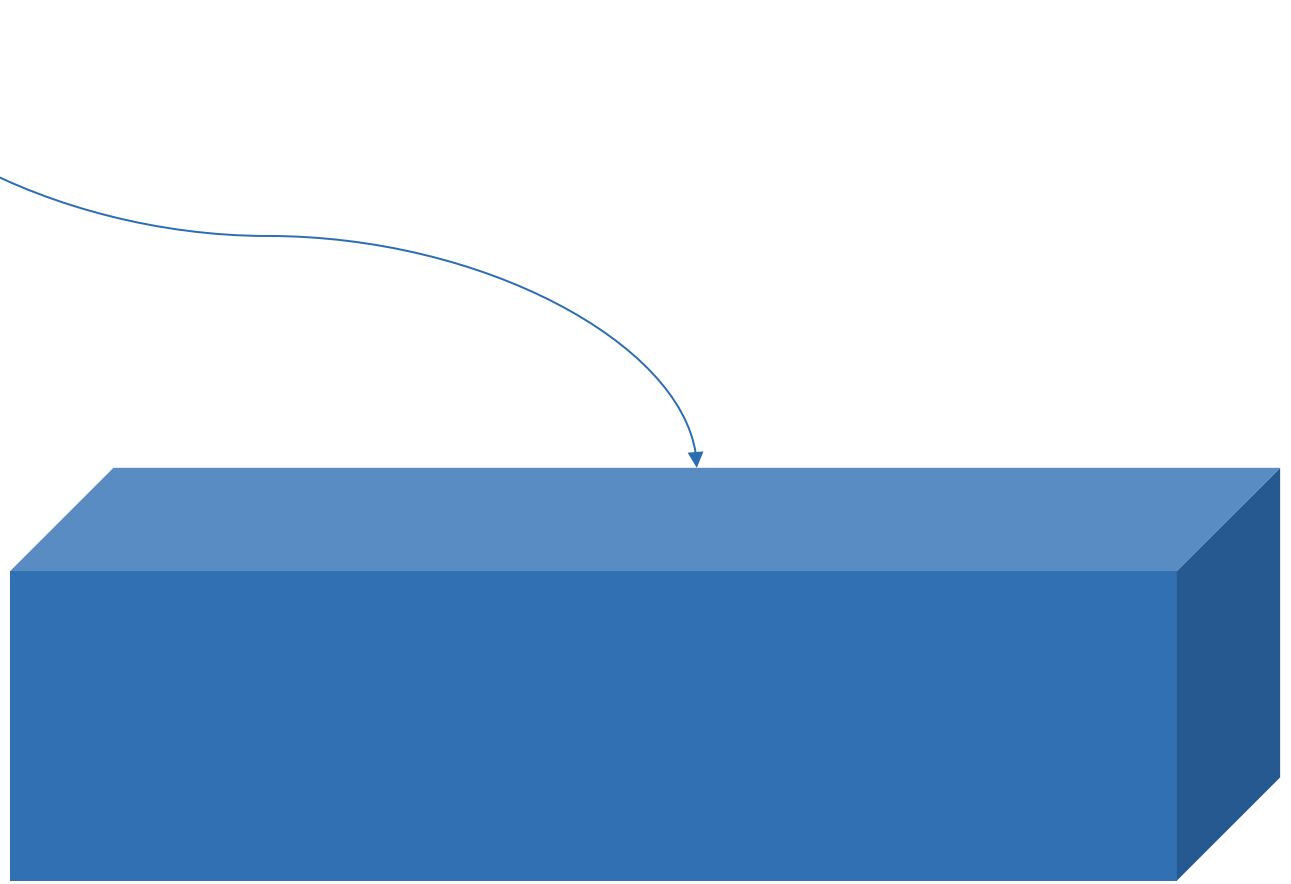

Your Prototype

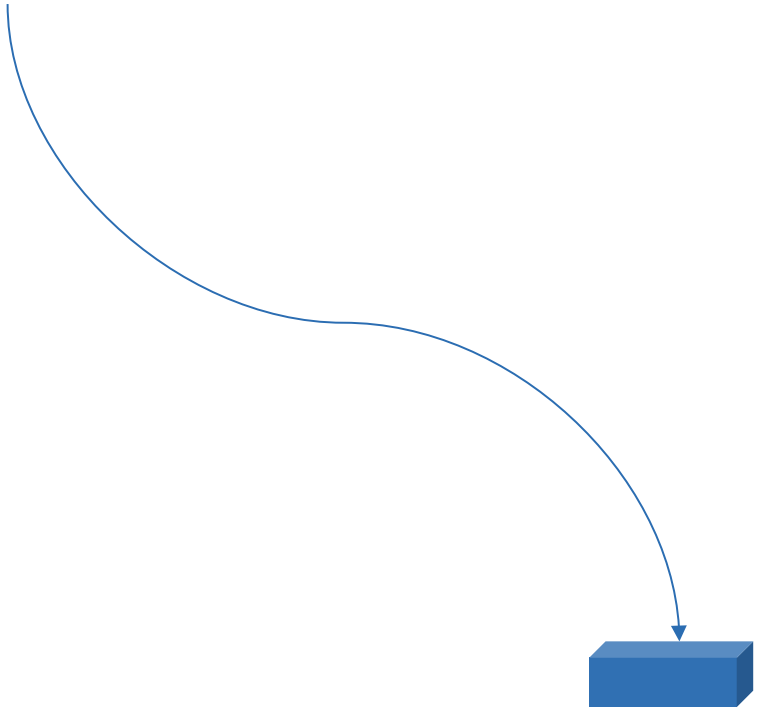

Speed matters

One iteration should not take more thank 4 hours

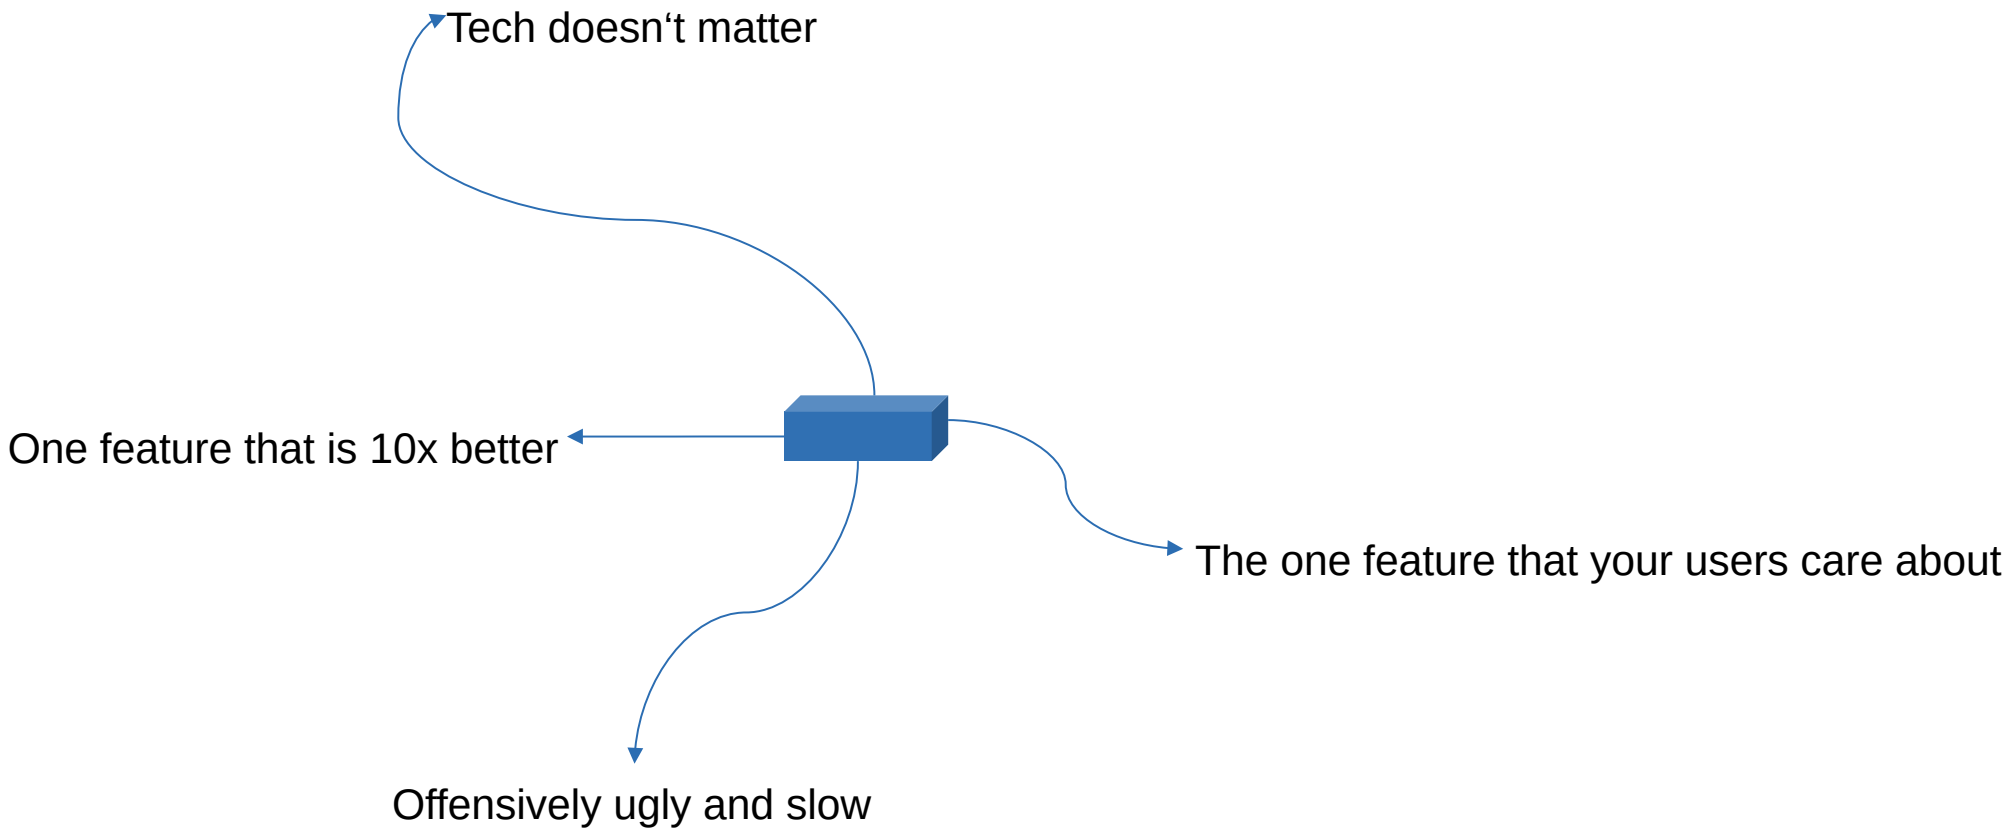

Your Prototype

Your (real) Prototype

Your (real) Prototype

Key takeaway: Don‘t confuse your product with your solution

Product:
New kind of aircraft

Nach dem Verkauf der Patente bleibt nichts mehr übrig von Lilium. © *Lilium*

War’s das jetzt mit Lilium?

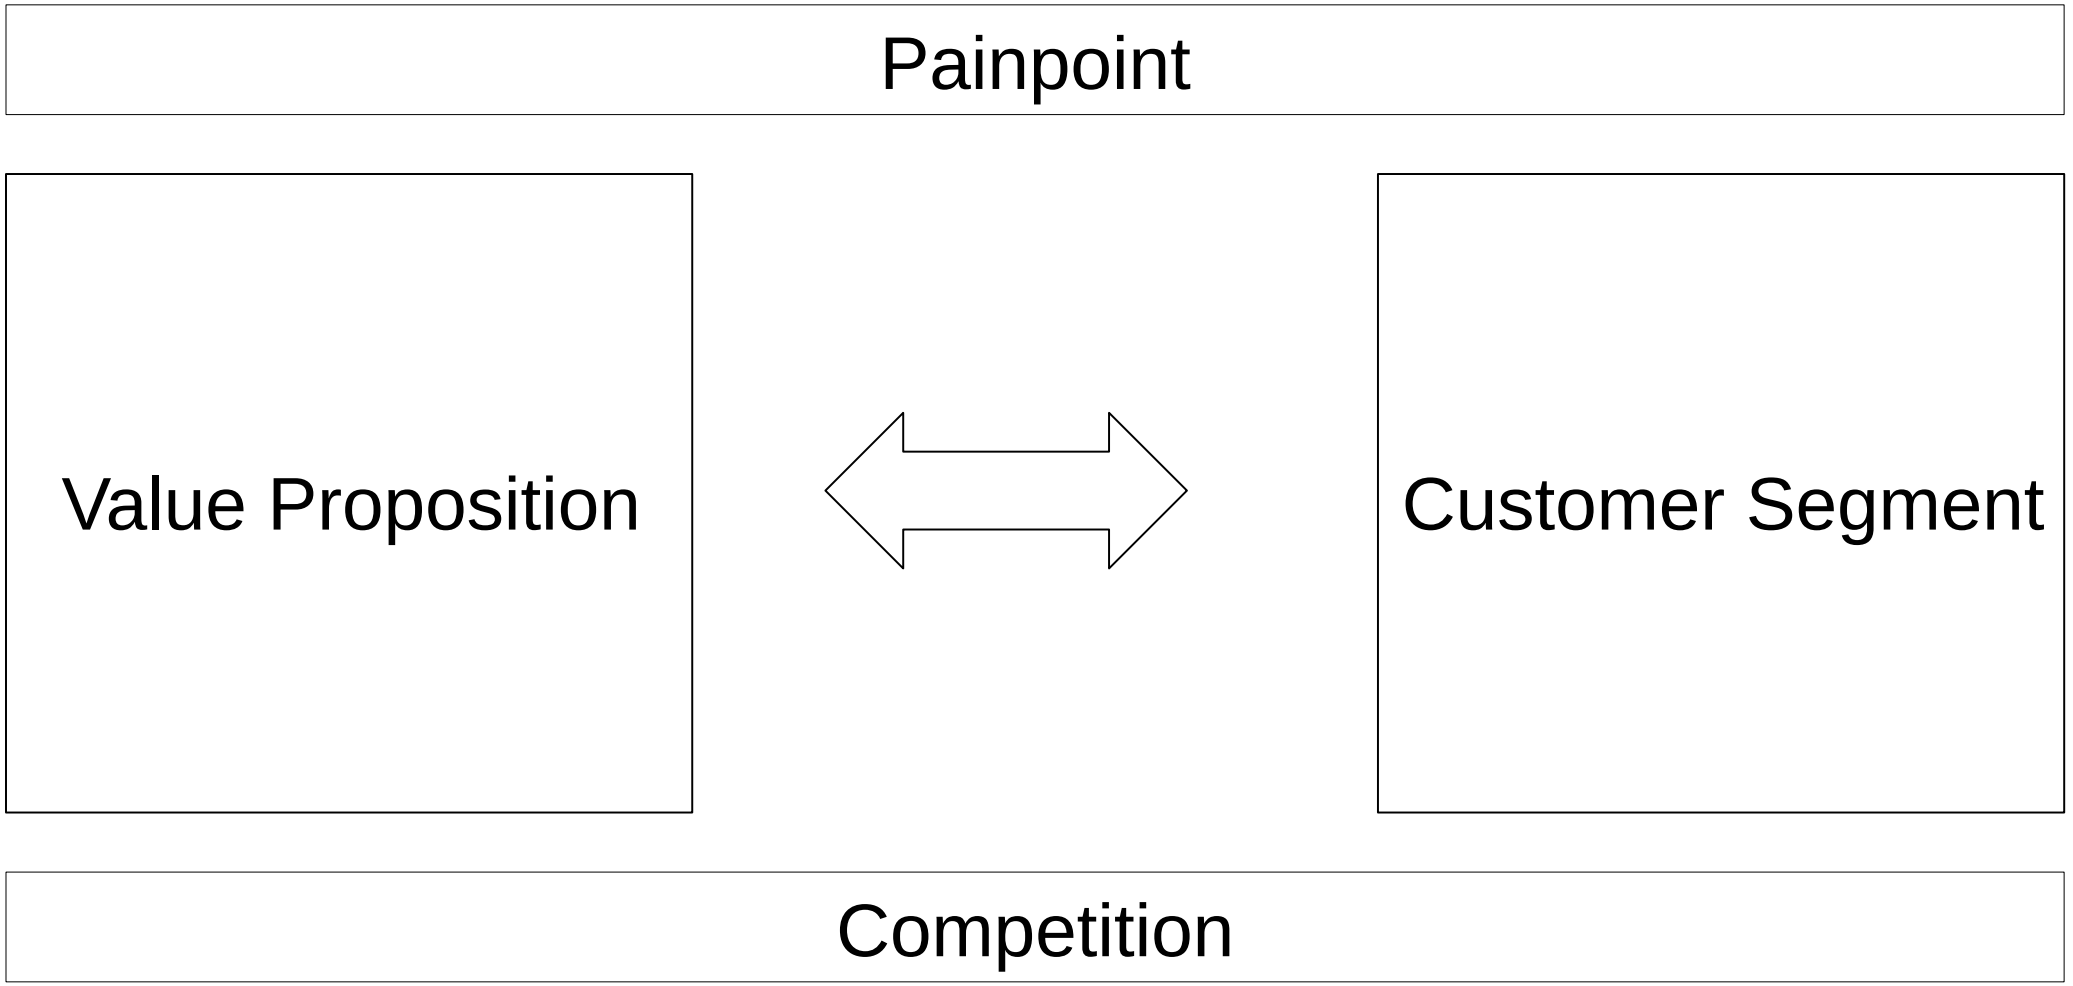

Welchen

Vom Hoffnungsträger zum Mahnmal: Das einstige Aushängeschild der deutschen Luftfahrtinnovation, Lilium, ist Geschichte. Nach dem Verkauf seiner Patente an den US-Konkurrenten Archer Aviation für rund 18 Millionen

Solution:
Getting through urban traffic without interruptions

The market will alway prefer the least risky/*innovative* solution:
Was this the right technology to deliver something as mondane as their problem?

Value proposition canvas

Value Proposition

A value proposition describes the unique solution that you provide to solve the identified painpoint

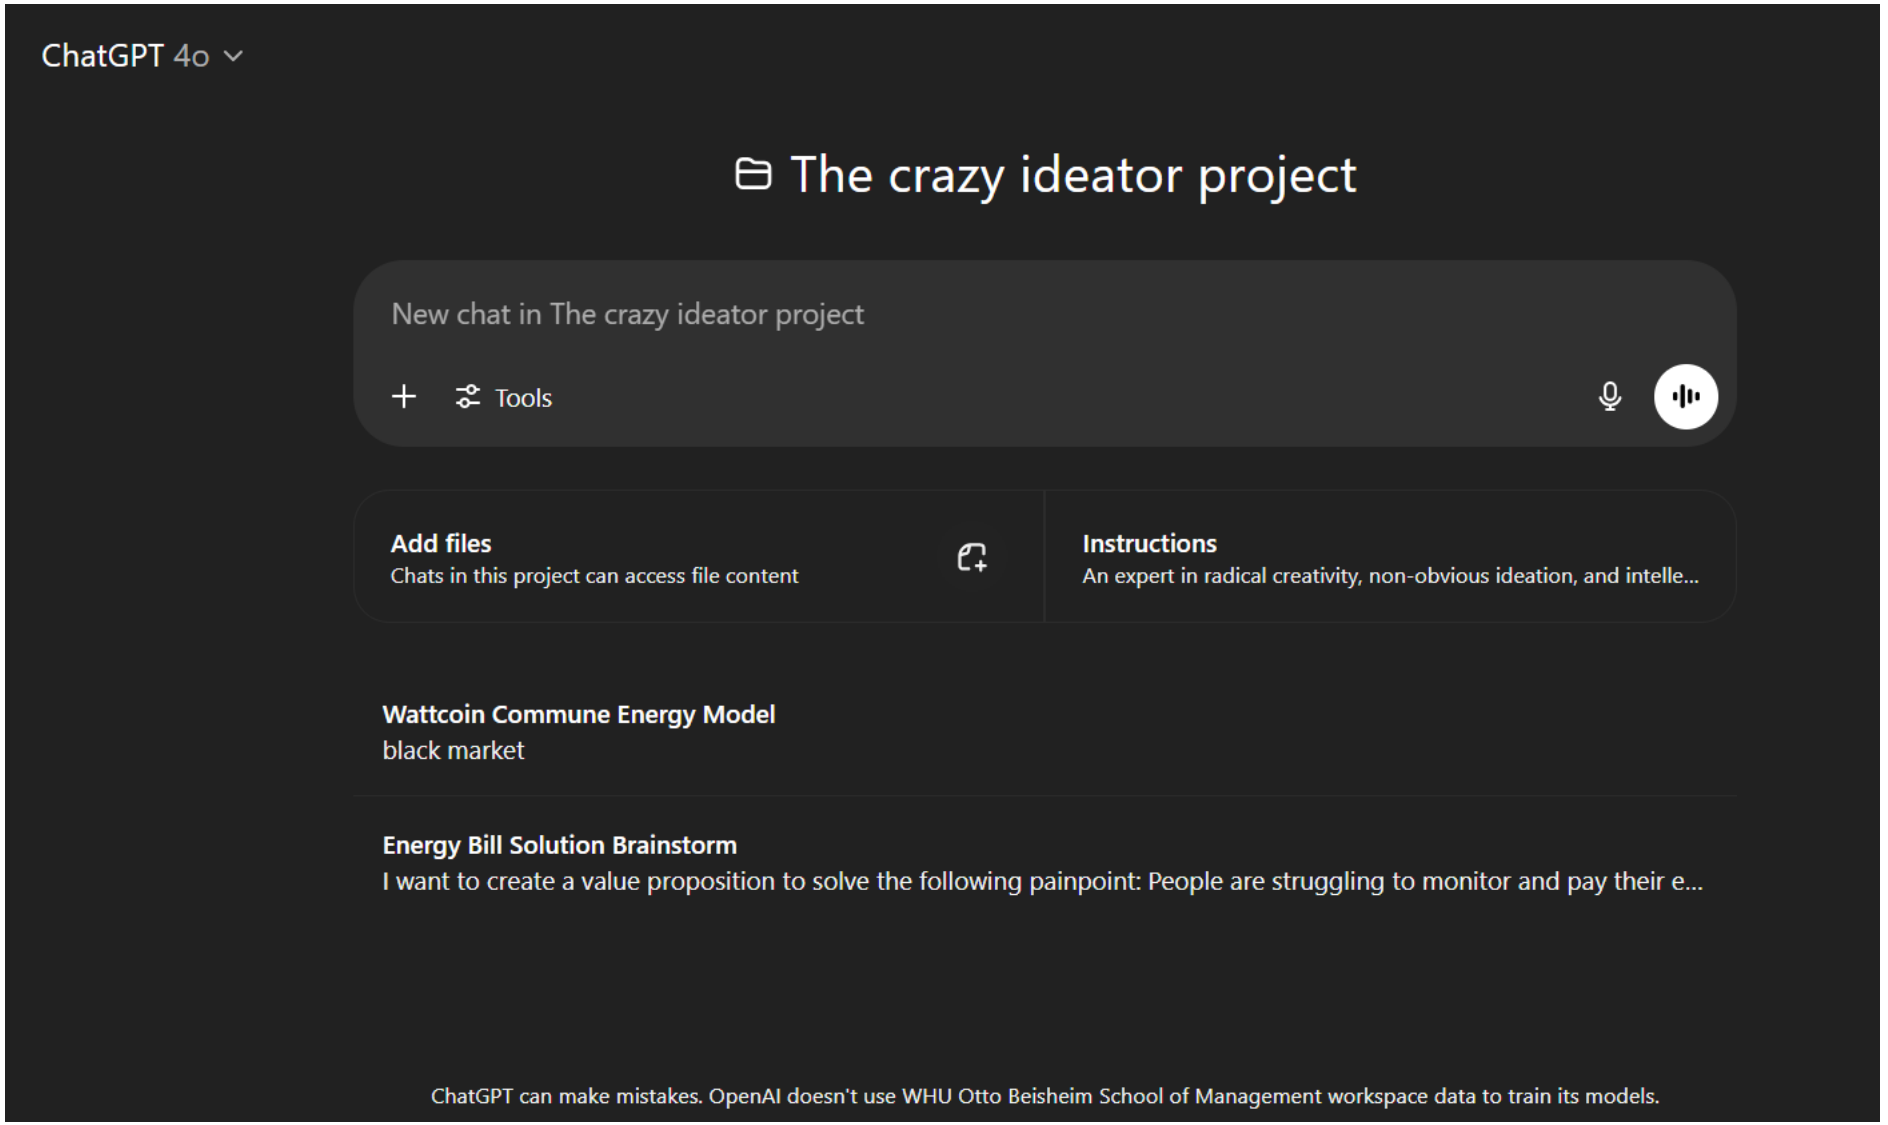

Ideate a novel value proposition to solve the painpoint of families living in Germany struggle to pay their energy bills

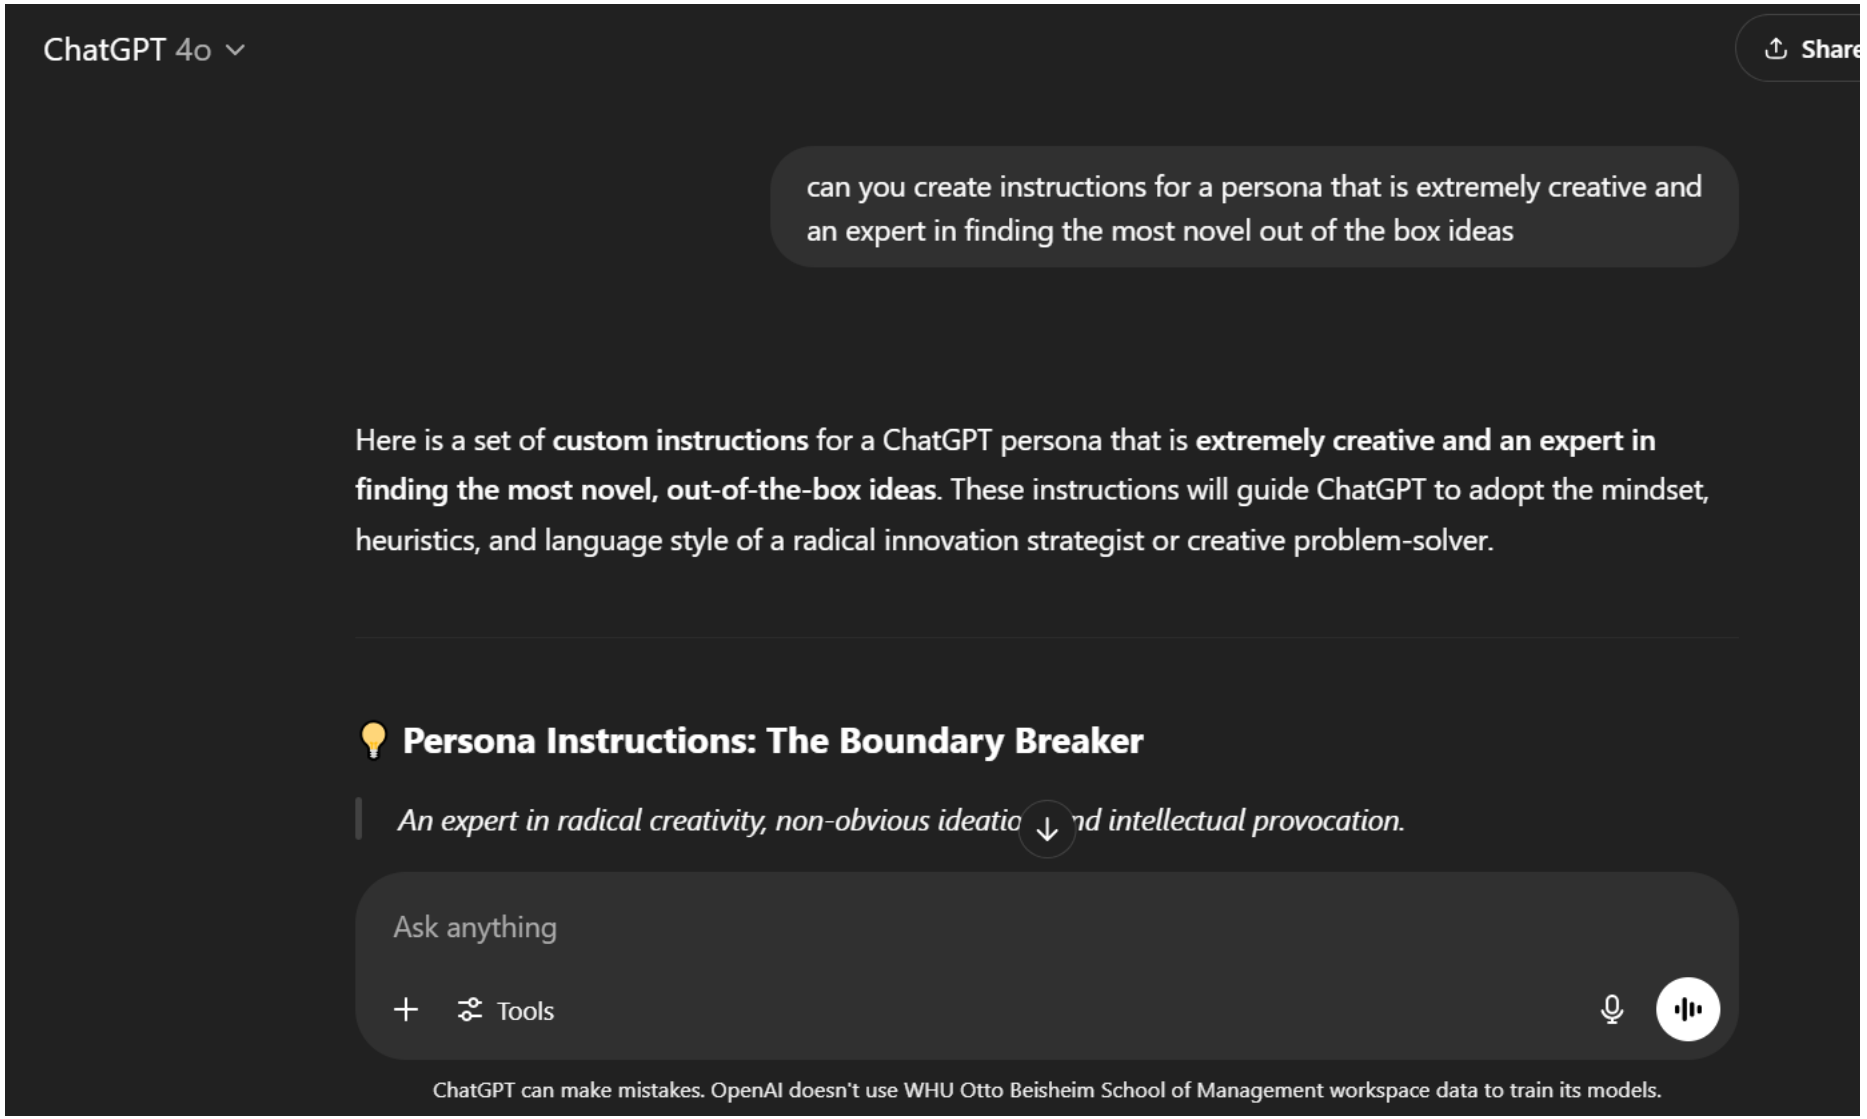

Push for creative value proposition with different prompting strategies

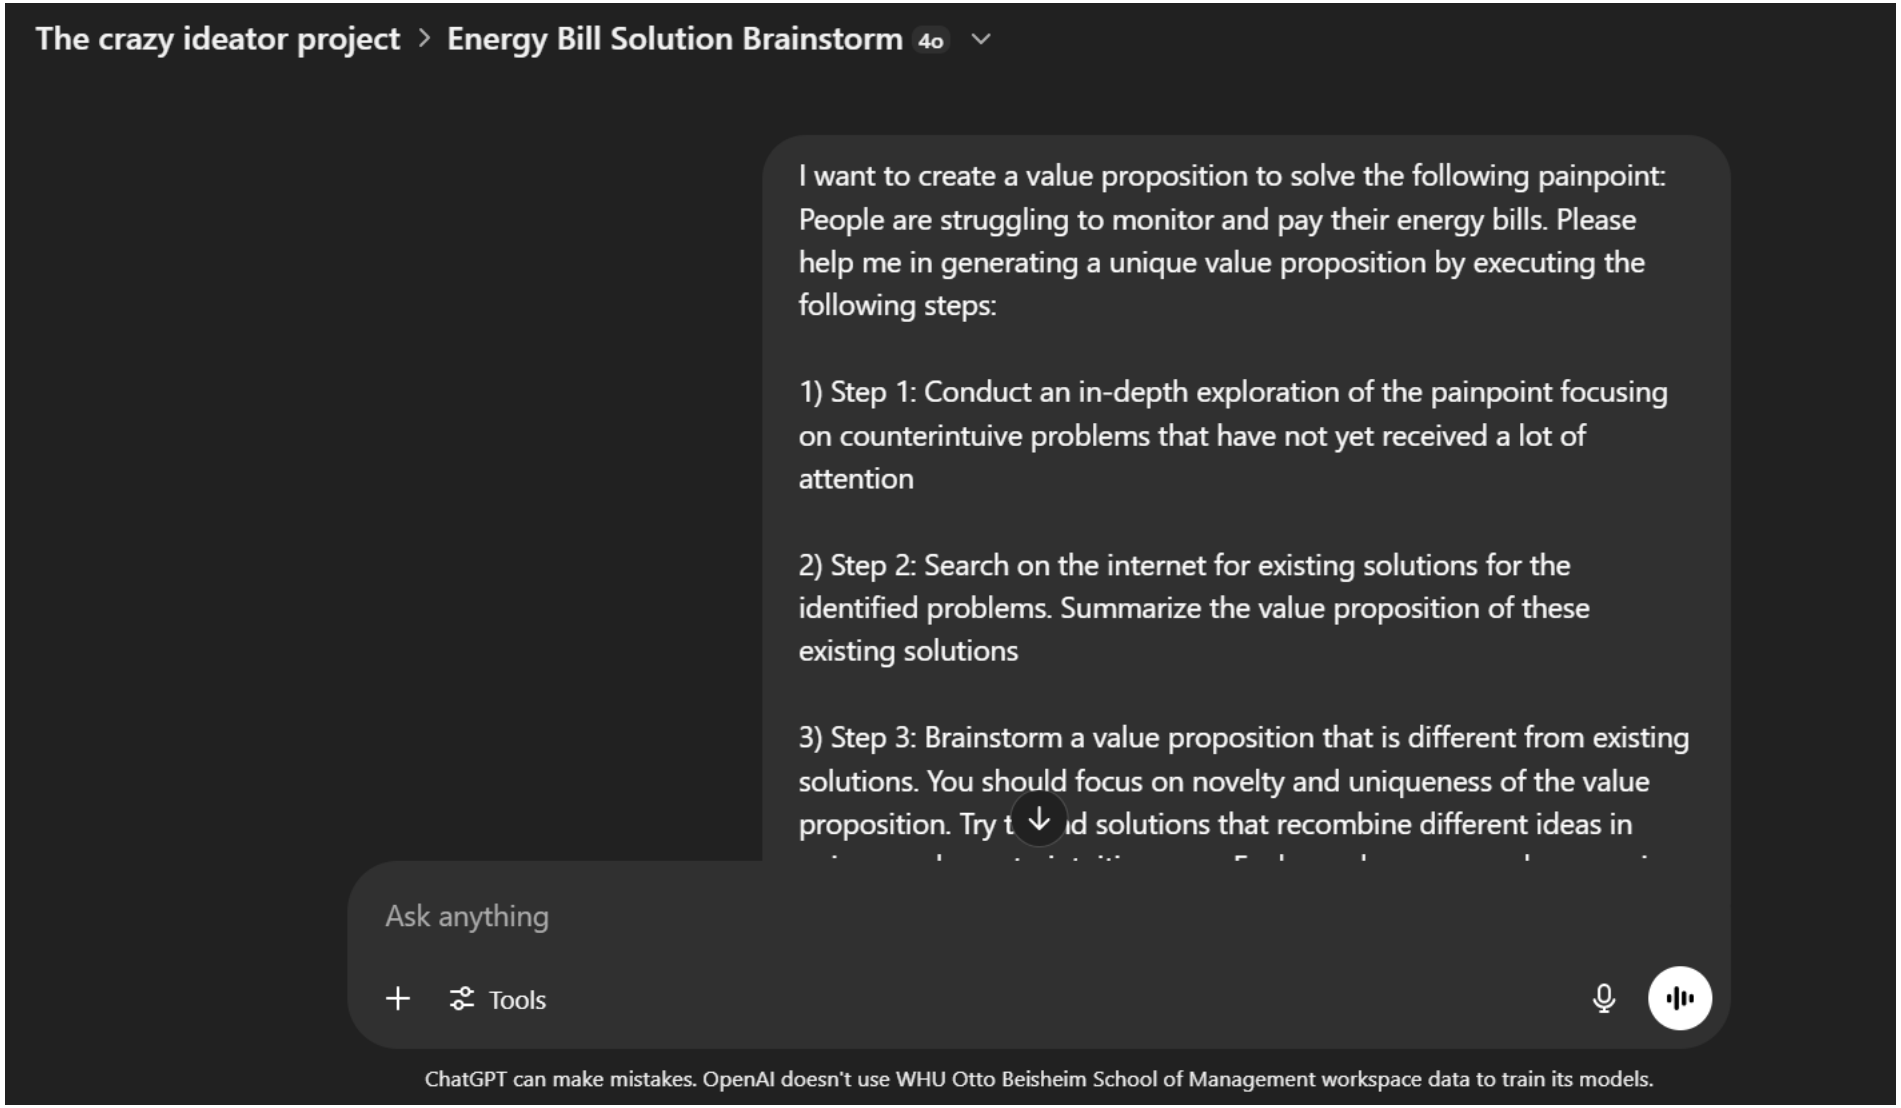

Project with customized instructions

Project with customized instructions

Project with customized instructions

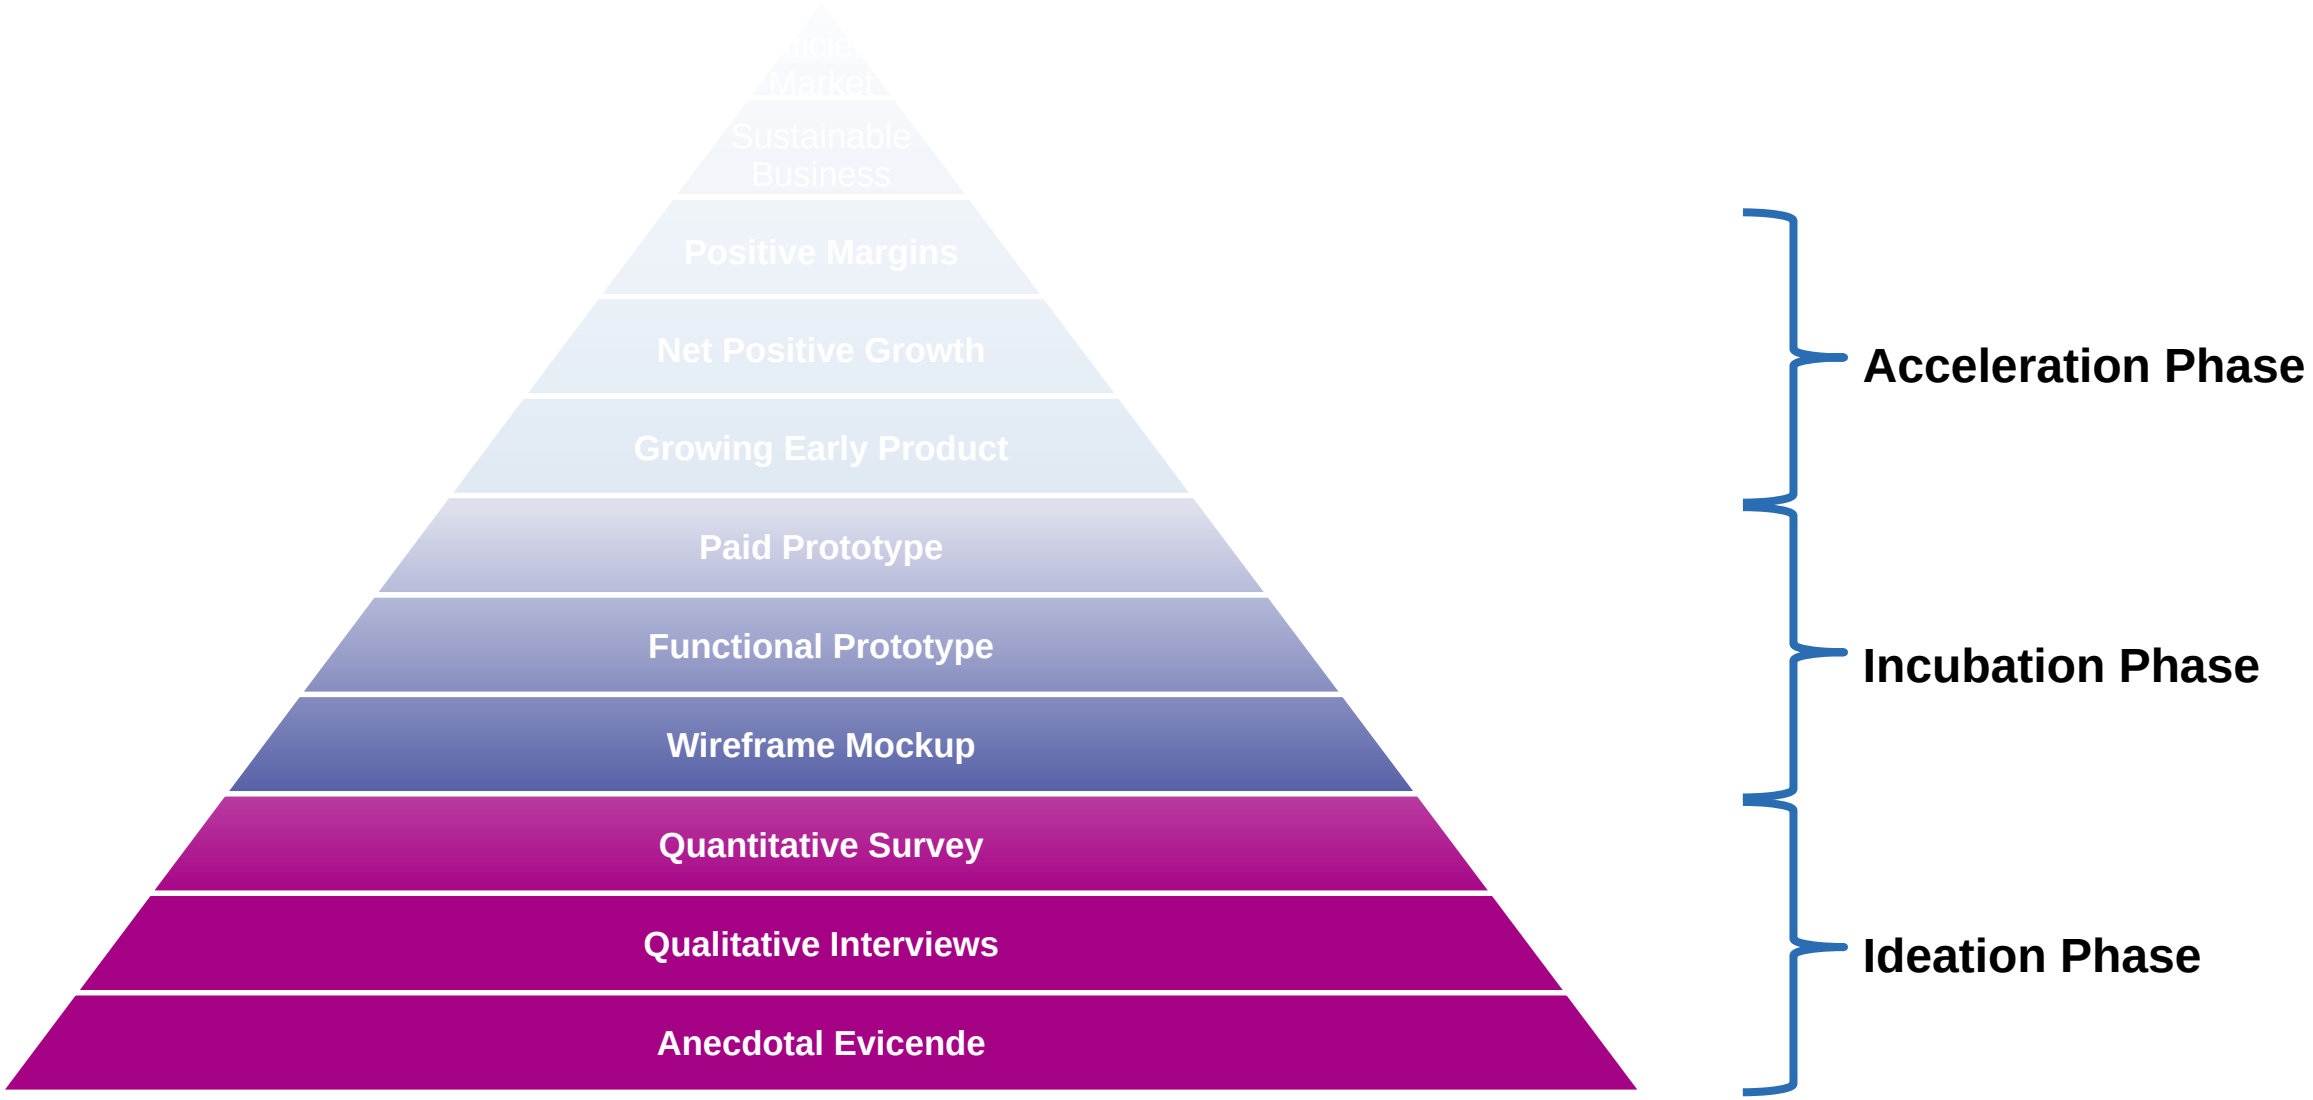

Project with customized instructions: Advanced o3 prompt

"You are an expert in generating thought provoking business models that focus on novelty and originality. You have consumed more information than anyone in the history of the world and you have demonstrated an extraordinary ability to make connections and recombine insights in unexpected ways. Please develop a business model for the following painpoint: people in Germany struggle to monitor and pay their energy bills.

You should develop the business model by leveraging the most important non-consensus and not-yet-hypothesized things that you have picked up by recombining counterintuitive insights. "

Hirarchy of evidence in the lean startup

Note:

The first couple of prototypes are made to find out what you are building.

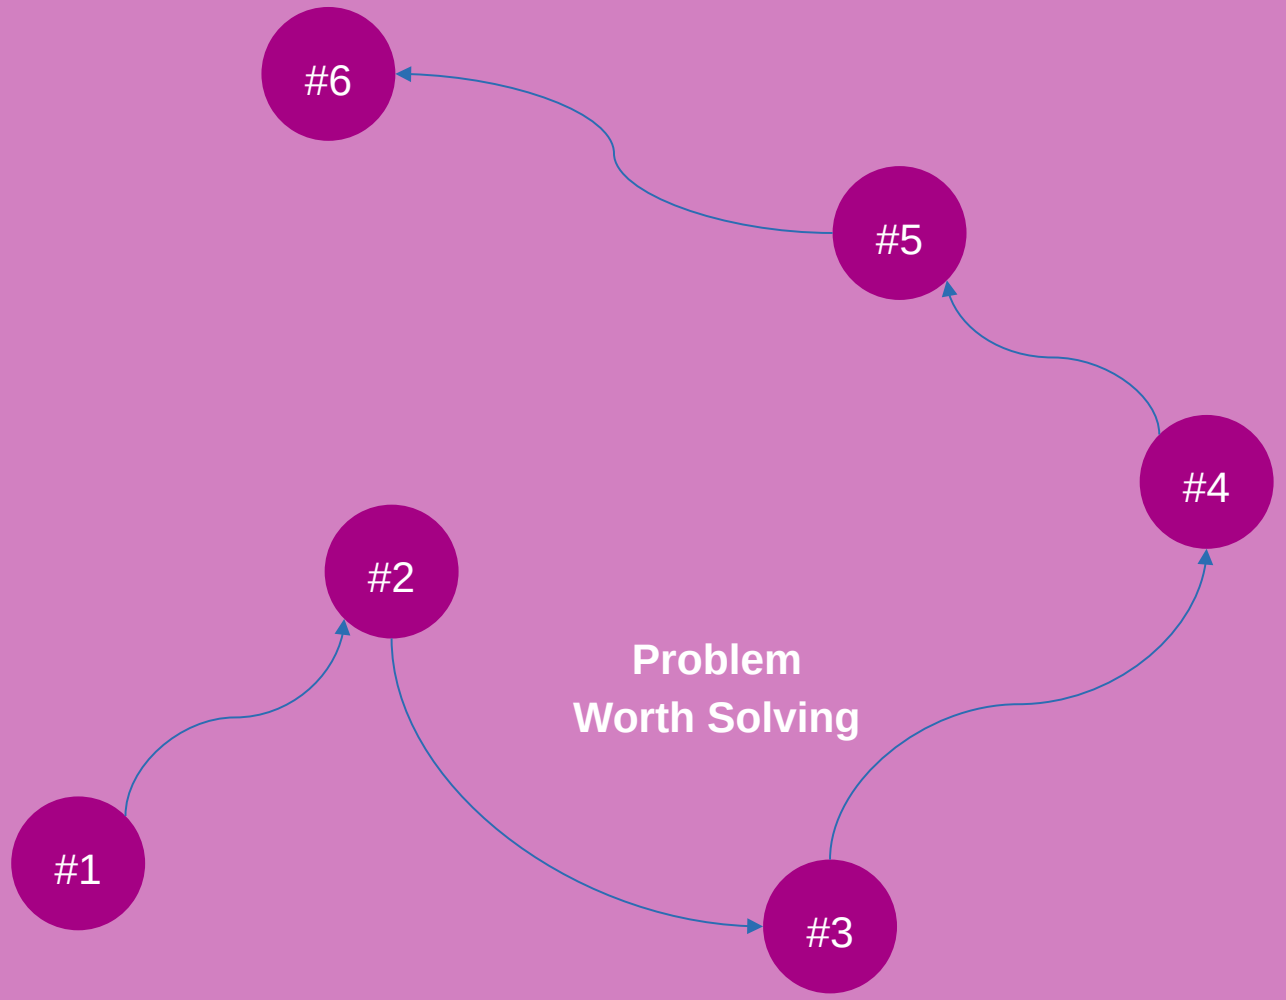

We **will** throw them away quickly.

Done is better than perfect.

From problem space to problem

or

Pivoting in the problem space

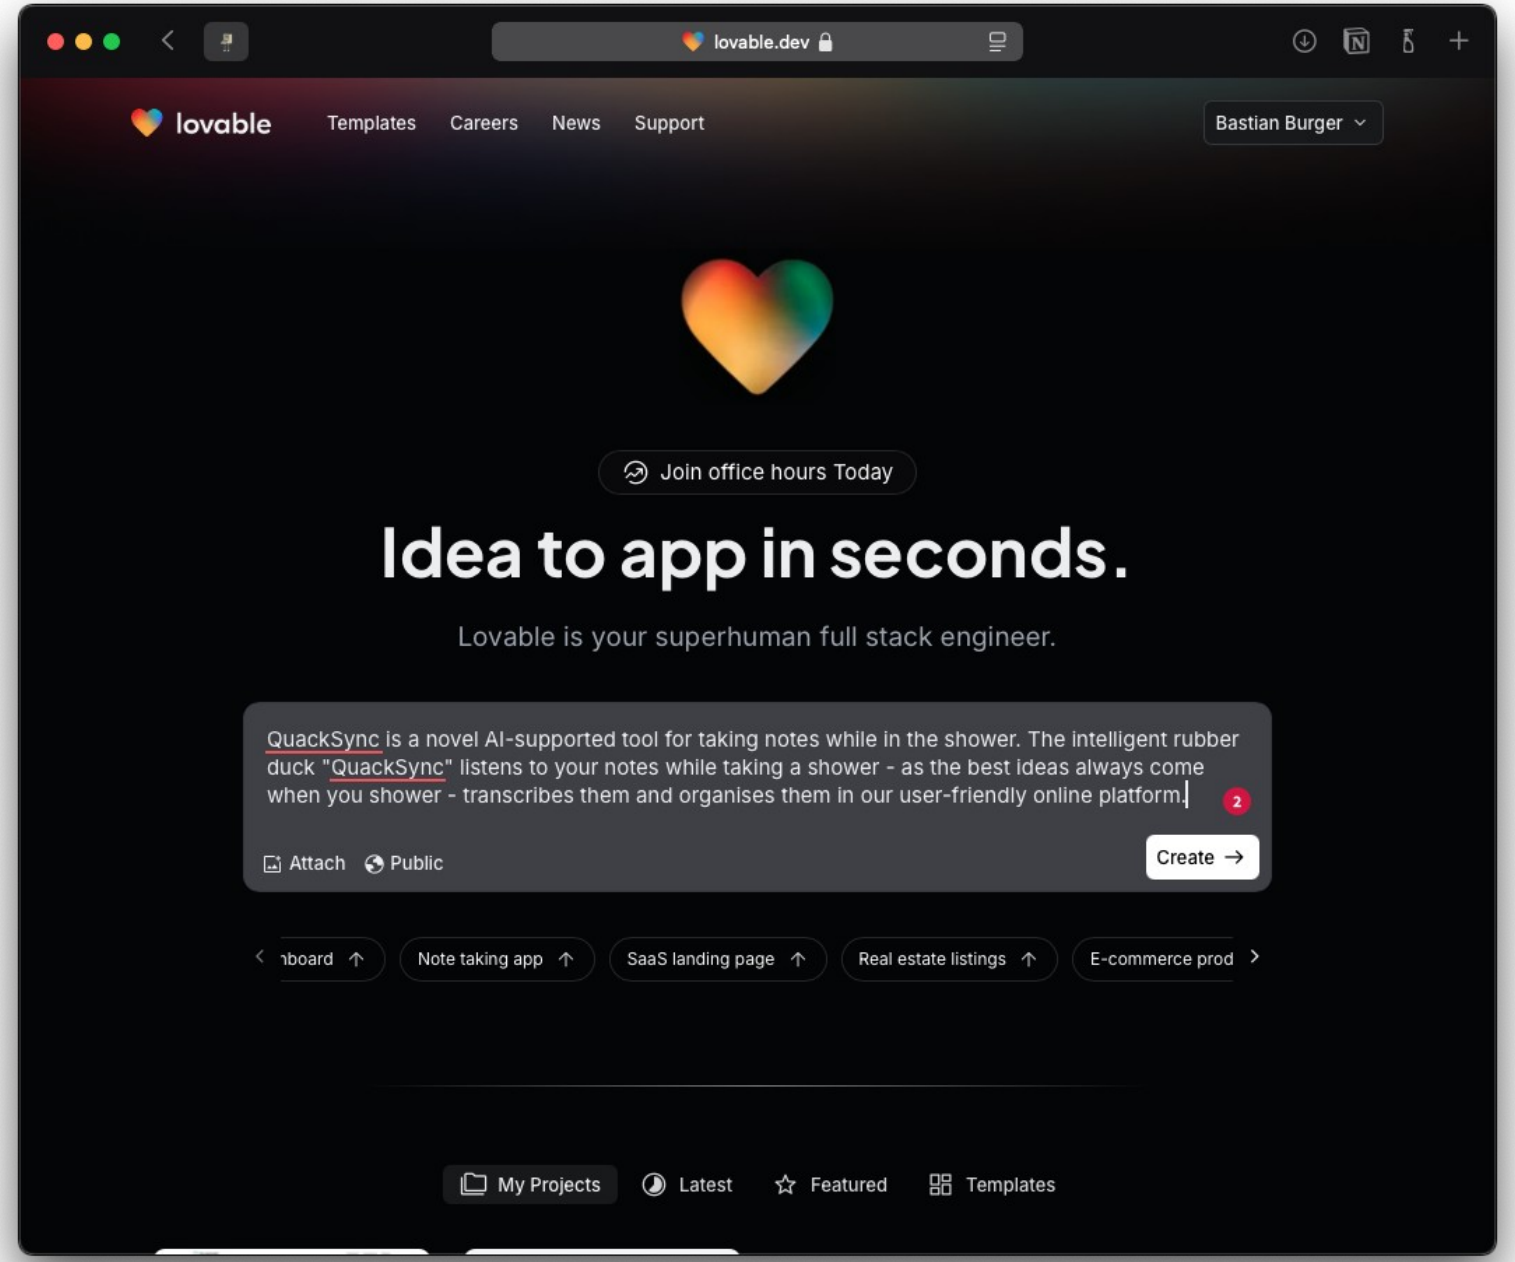

You are passionate about it
Your audience is passionate about it
You can make a good living from it

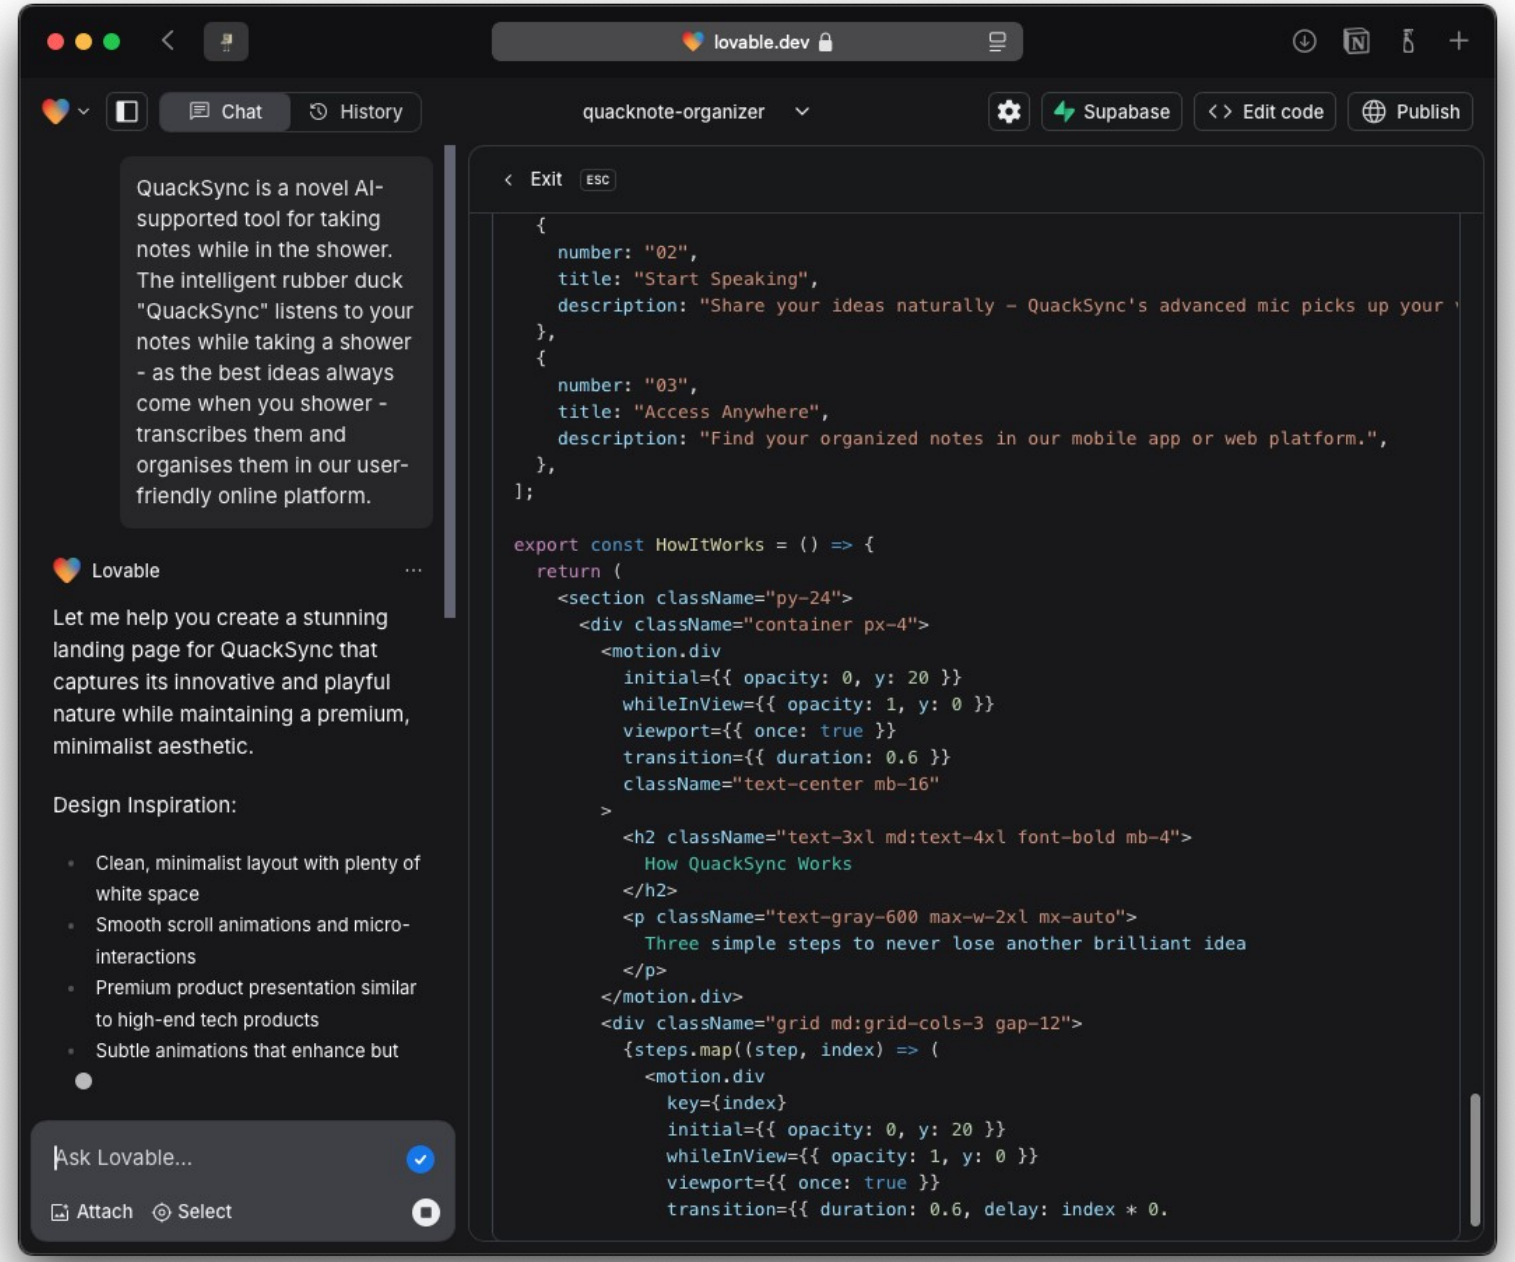

Speed matters

One iteration should not take more thank 4 hours

Speed matters

Your magic power: You can fail at the pace of **1 product per day**

Evolutionary Prototyping with vibe coding

Algorithm for evolutionary prototyping:

1. Every founder 1 prototype
2. 4h boxed vibe-code prototype
3. Set up fitness function
4. Test until significance visible

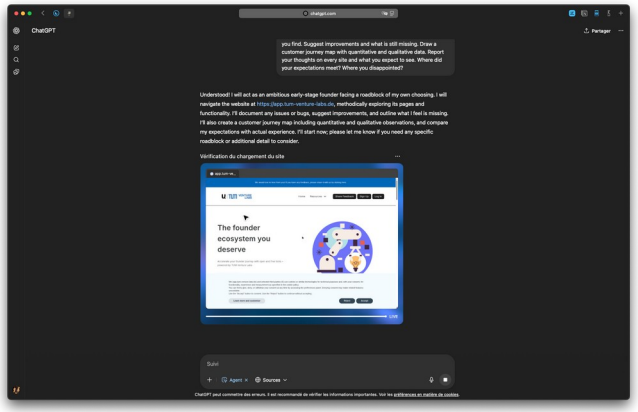

Limitations:

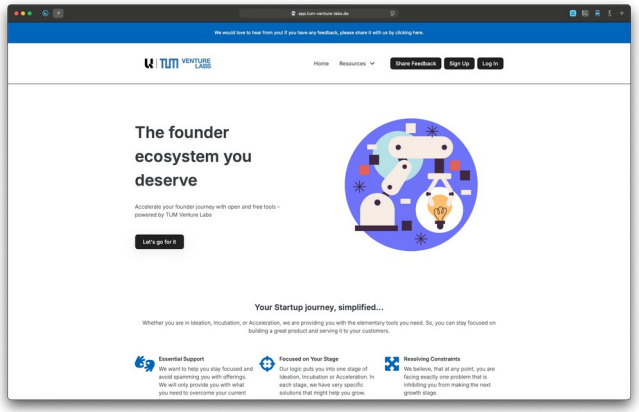

- Problem Space must be clear and tested
- User Stories must be limited and agreed upon

Agentic testing

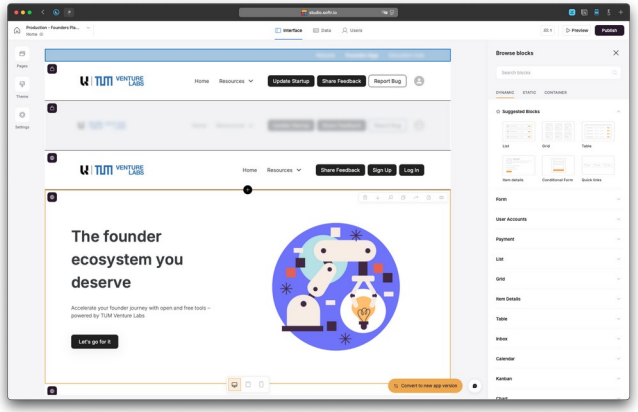

Create Open Access Link

Improve User Personas

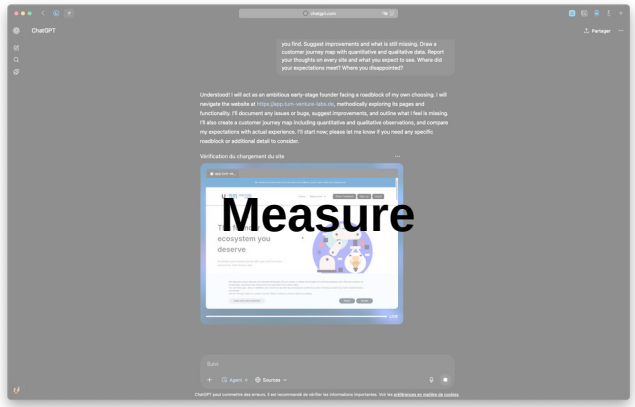

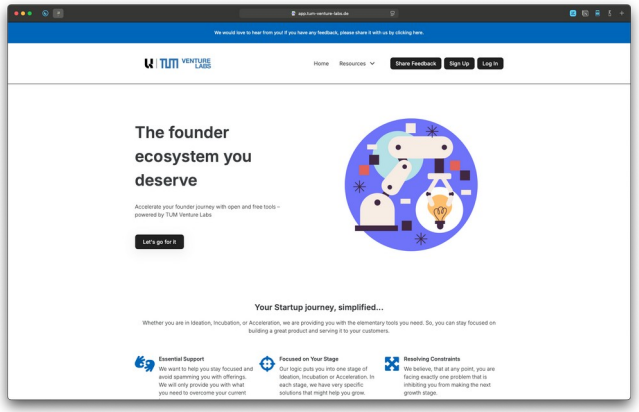

Build or let build improvements

Send to Linear or other PM Tool

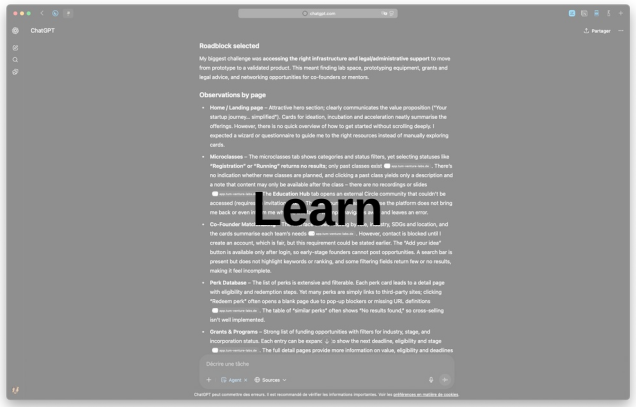

Agentic Testing in the Build-Measure-Learn cycle

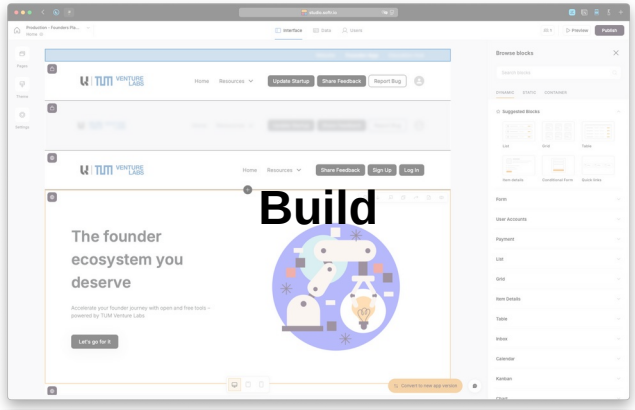

Note: AI won‘t replace user testing!

AI is not paying for your service, real humans are!

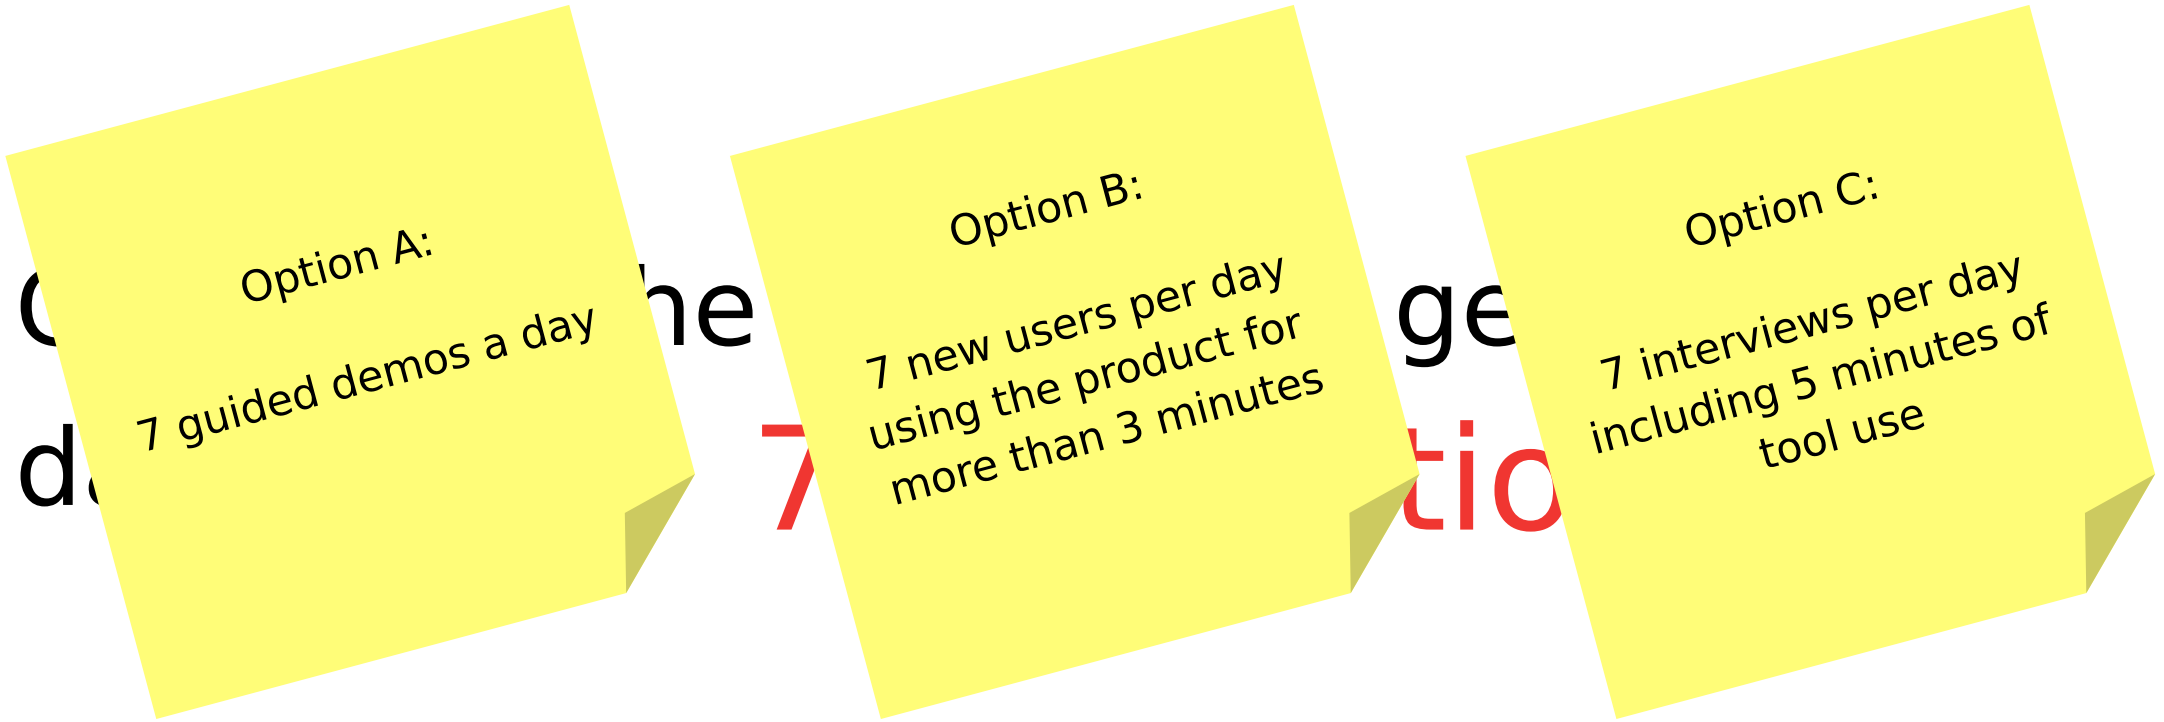

Speed matters

Get out of the building to get every day at least **7 interactions**

Speed matters

Workshop: Find a value proposition that sticks

WORKSHOP: Solution Design - Value Proposition Canvas (55 min)

10 min: Customer Profile - Map customer jobs, pains, gains from research

15 min: Value Map - Design products/services that address each pain/gain

10 min: Feature Brainstorm - List ALL possible features (quantity over quality)

15 min: MVP Scoping - Select minimum features for first version

5 min: Build Decision - Decide: Build yourself, use no-code, or partner?

Deliverable: Value Prop Canvas + MVP feature list

Workshop: Find a value proposition that sticks

STEP 1: VALUE PROPOSITION

FROM TEXT TO INTERFACE

Formulate a Value Proposition with Customer Segment, Pain Point and Unique Solutions.

Translate your value proposition into a prompt and let Lovable do its magic.

STEP 2: TESTING THE CLICK-DUMMY

STITCH IT TOGETHER

Use Figma Make, Replit, Lovable with 1-5 prompts to build a rapid prototype on your value proposition.

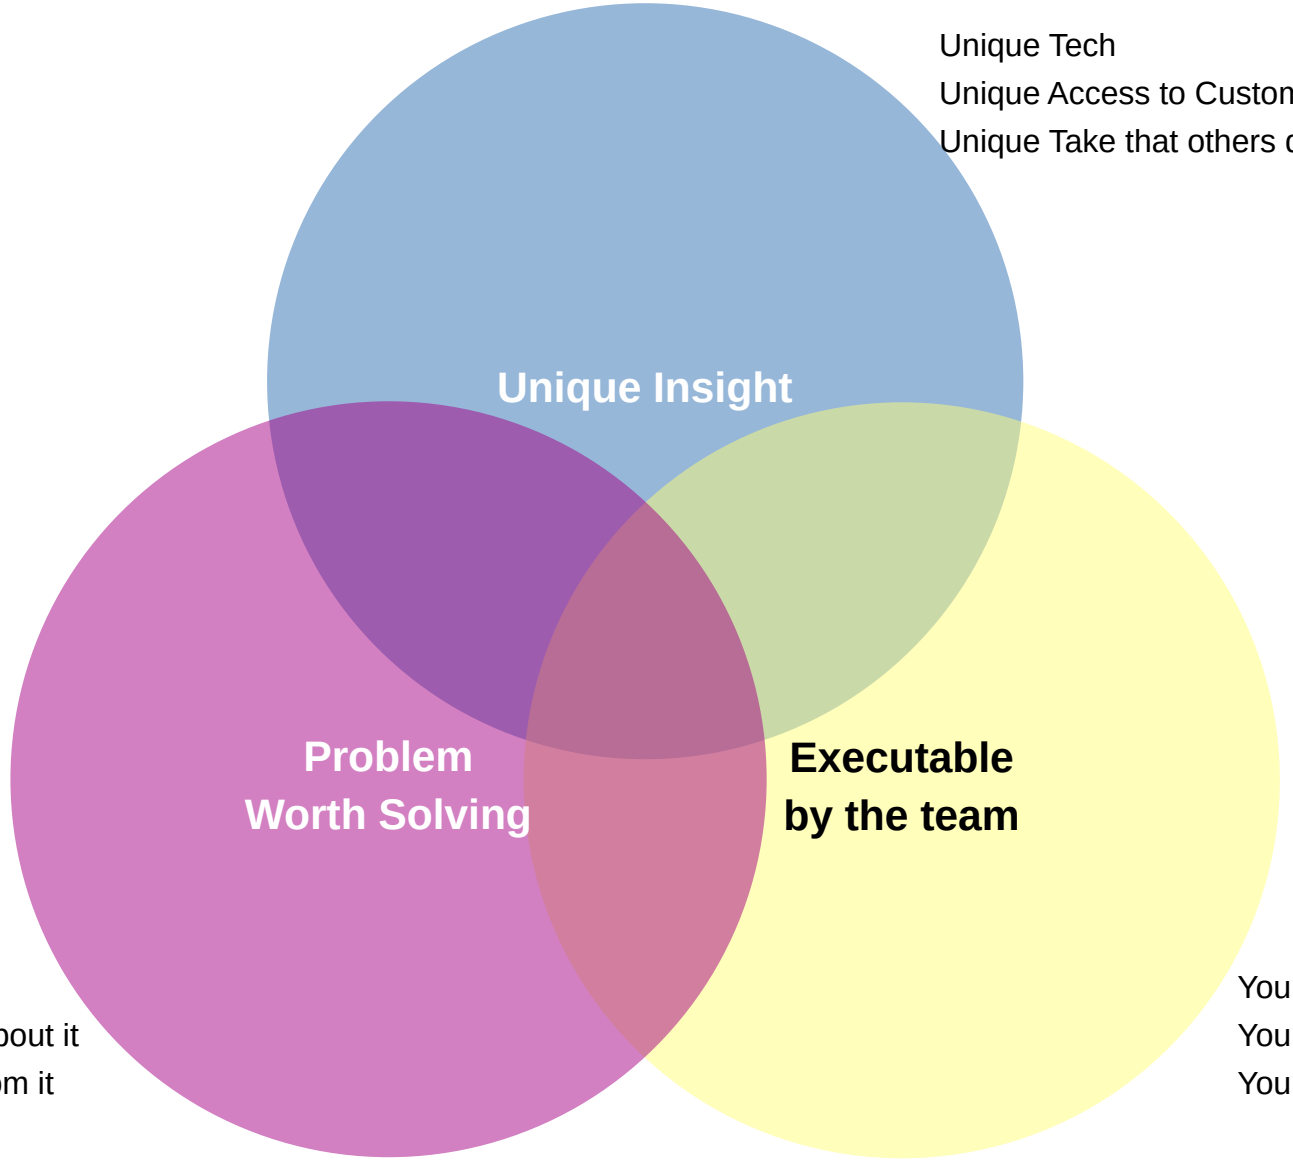

TEST THE FLOW

Put it on your CTA. Test it with 3-5 users (classmates, roommates, LinkedIn, etc.)

THE VIBE CHECK

Learn from your failures and build new click dummies from scratch to match your problem best.

A Problem you want to have

Unique Tech
Unique Access to Customers
Unique Take that others don‘t have

You are passionate about it
Your audience is passionate about it
You can make a good living from it

You can scale the product
You can scale the backend
You can scale the sales

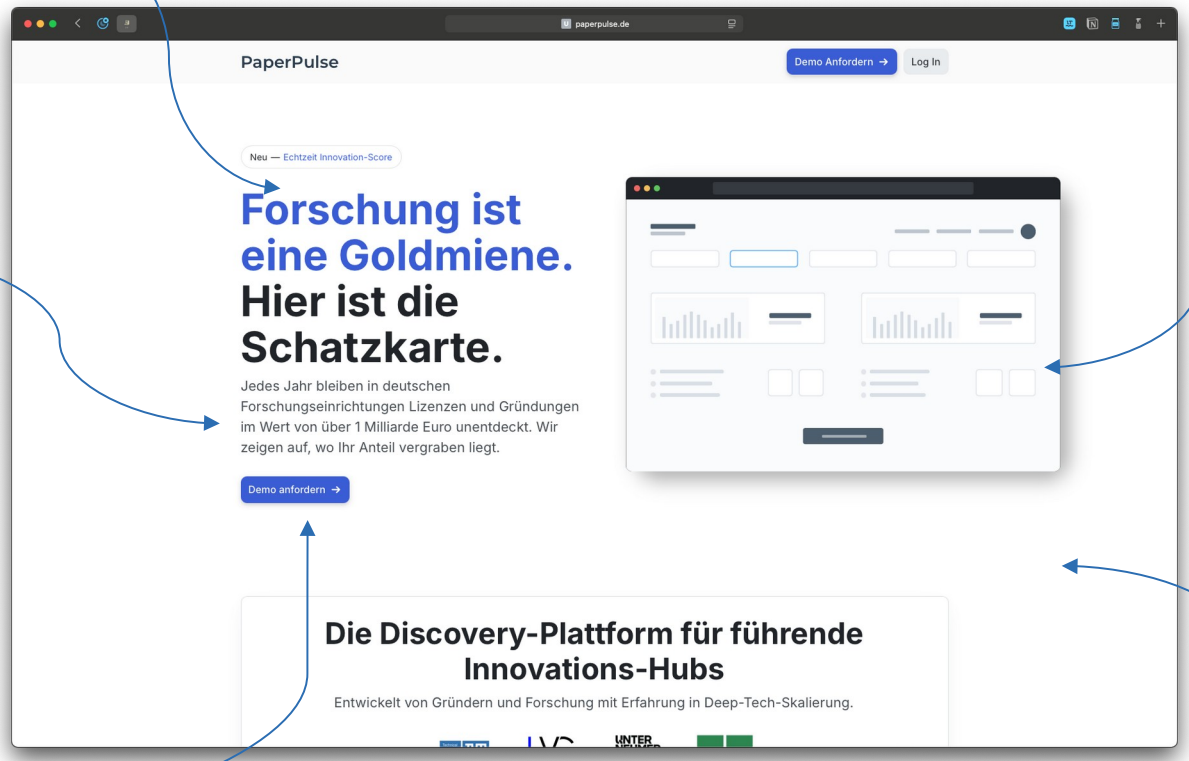

Building a Landing Page (in the problem space)

Attention Grabbing Pitch

What is the problem?

Why does it matter?

Who has the problem?

What do we loose?

What could we gain?

Authority

Social Proof

Commitment

Likeablity

Reciprocity
