Workshop 05 — 10x or Die

> Module 05 · The Solution Space · 90 minutes

The 90 Minutes

Time	Block	What happens
10m	**Data Review (go/ pivot fork)**	Threshold read out loud next to the number → GO converges, weak data forks to pivot type 1/2. What converted, what didn't?
15m	**10x Value Test**	Score your solution on all 4 gates of the 10x Test
25m	**MVP Sketch**	Draw the absolute minimum that delivers the 10x value
25m	**Build Plan**	What can you build THIS WEEKEND? Stack, tools, timeline
15m	**Weekend Commit**	Public commitment: deploy working prototype by Sunday

Discussion Sparks

- "If you can't state your 10x value in under 10 words, go back to the problem."
- "Claude + Cursor + Vercel = deployed product by Sunday. No excuses."
- "What's the ONE thing your MVP does that makes people say 'holy shit'?"

Must Produce — Today's Deliverable

10x scorecard + MVP spec + Weekend Build commitment

Kill criteria: You can't pass Gate 1 of the 10x Test: state value in <10 words
