VENTURE LABS

MODULE 6
Rapid Prototyping (with AI)
Build Your First Version in Hours, Not Months

ASSIGNMENT: Build a working prototype using AI tools and deploy it

A joint initiative by

UNTERNEHMER TUM

Check-In:

What is your Energy Level Today?

Check-In:

Experience - What AI tools have you used before?

Check-In:

Comfort Level - Rate 1-10: How confident are you with AI coding?

Check-In:

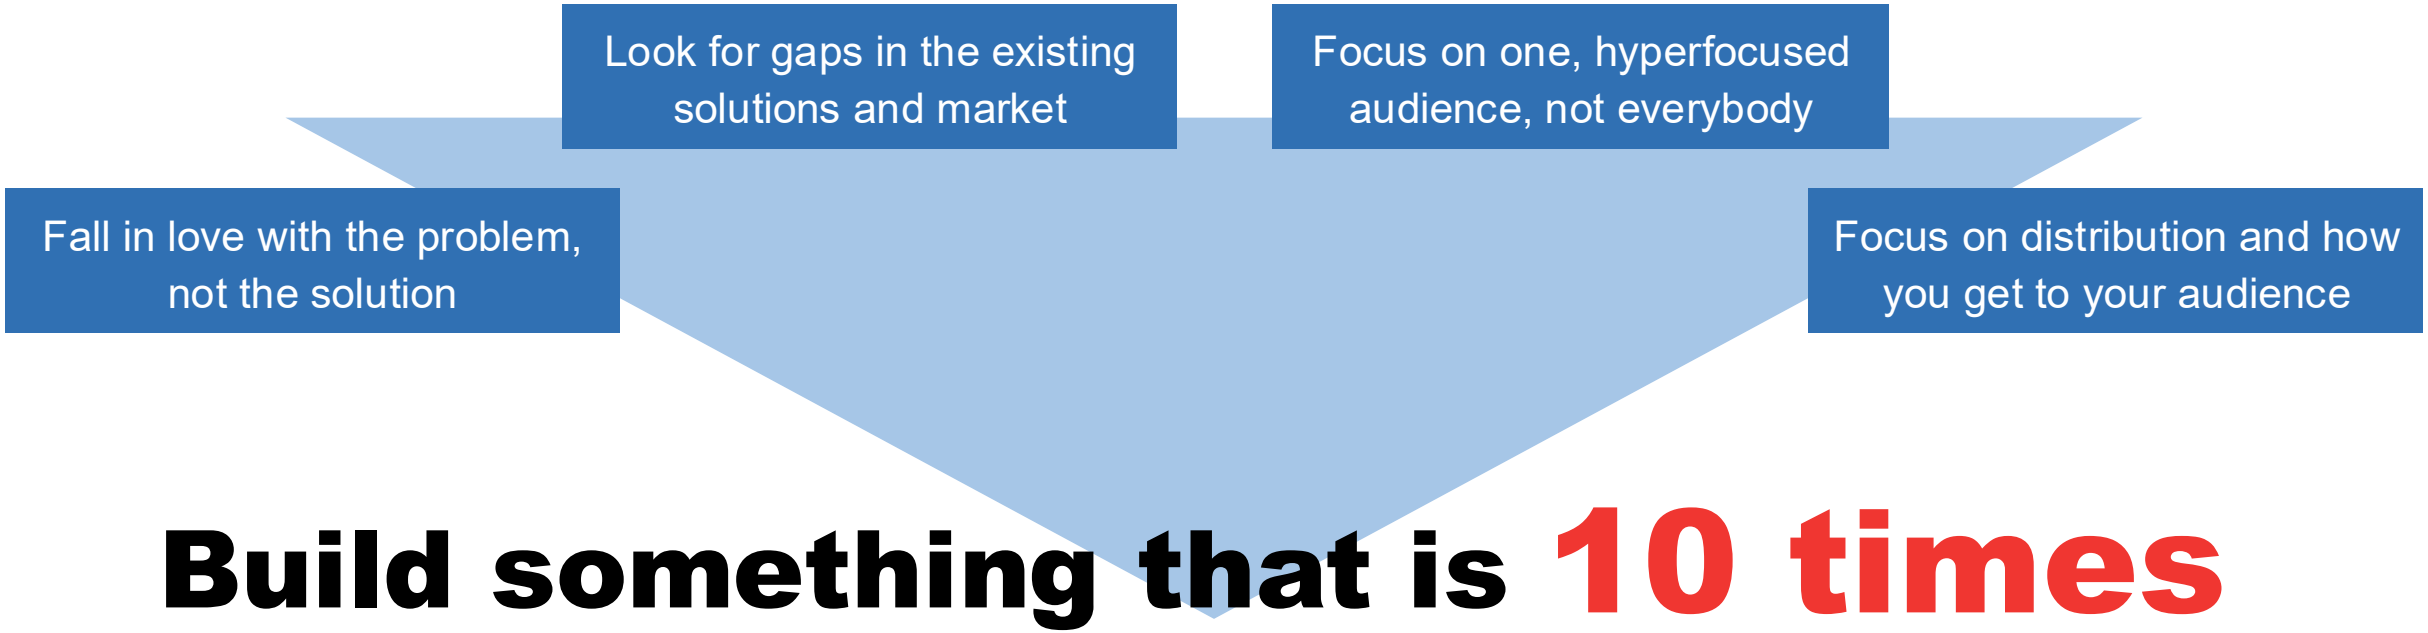

Excitement - What would you love to build with AI?

Check-In:

How many users did you talk to?

Recap from last time

Core principles for problems and ideas

Build something that is 10 times better than what your users have now

Understanding ideas

A strong idea comes from a strong set of constraints

Smart constraints come from subject expertise and experience (you can trust your gut)

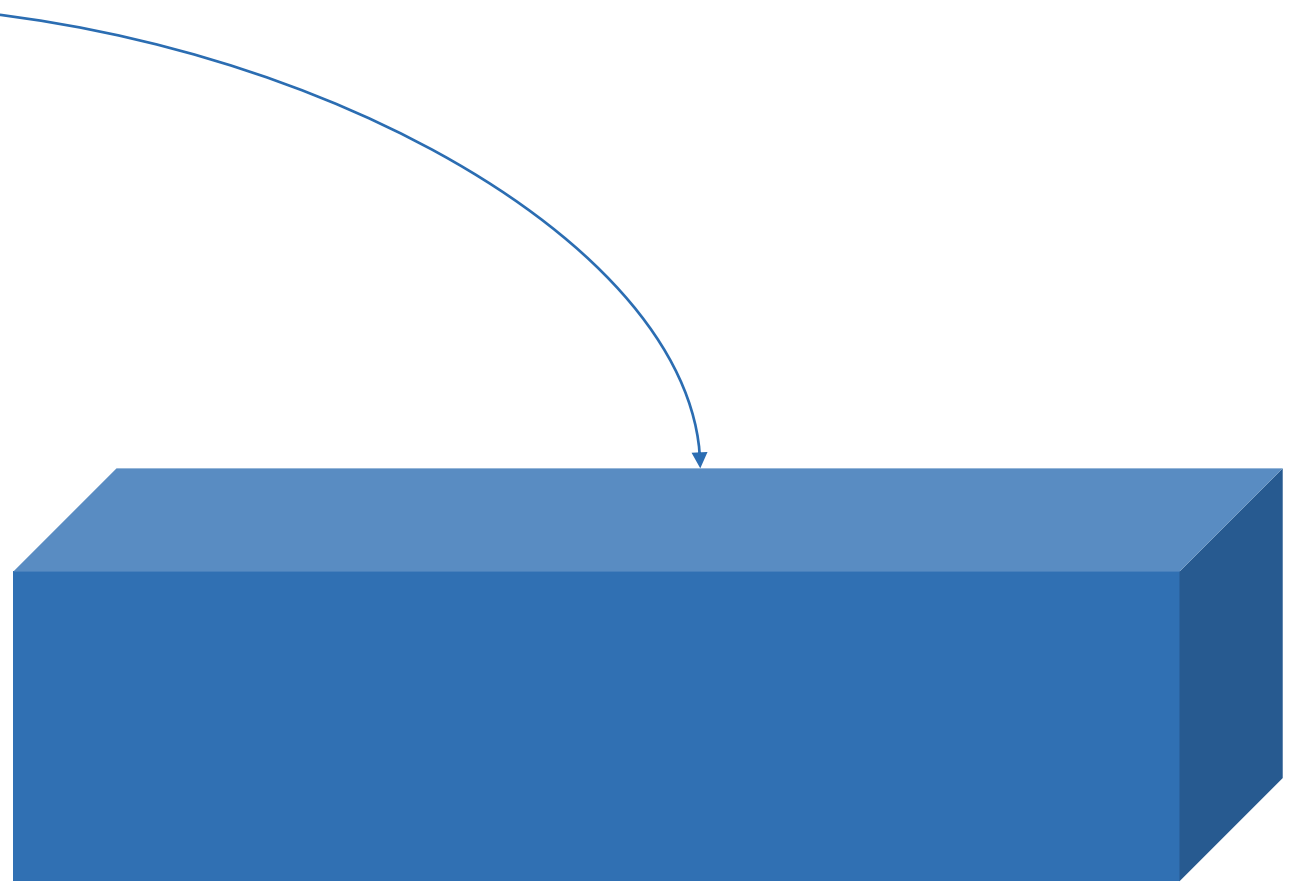

If you set your constraints well, there are only few implementations left (it‘s ok to pivot)

If you set your constraints smart, people will enjoy the result

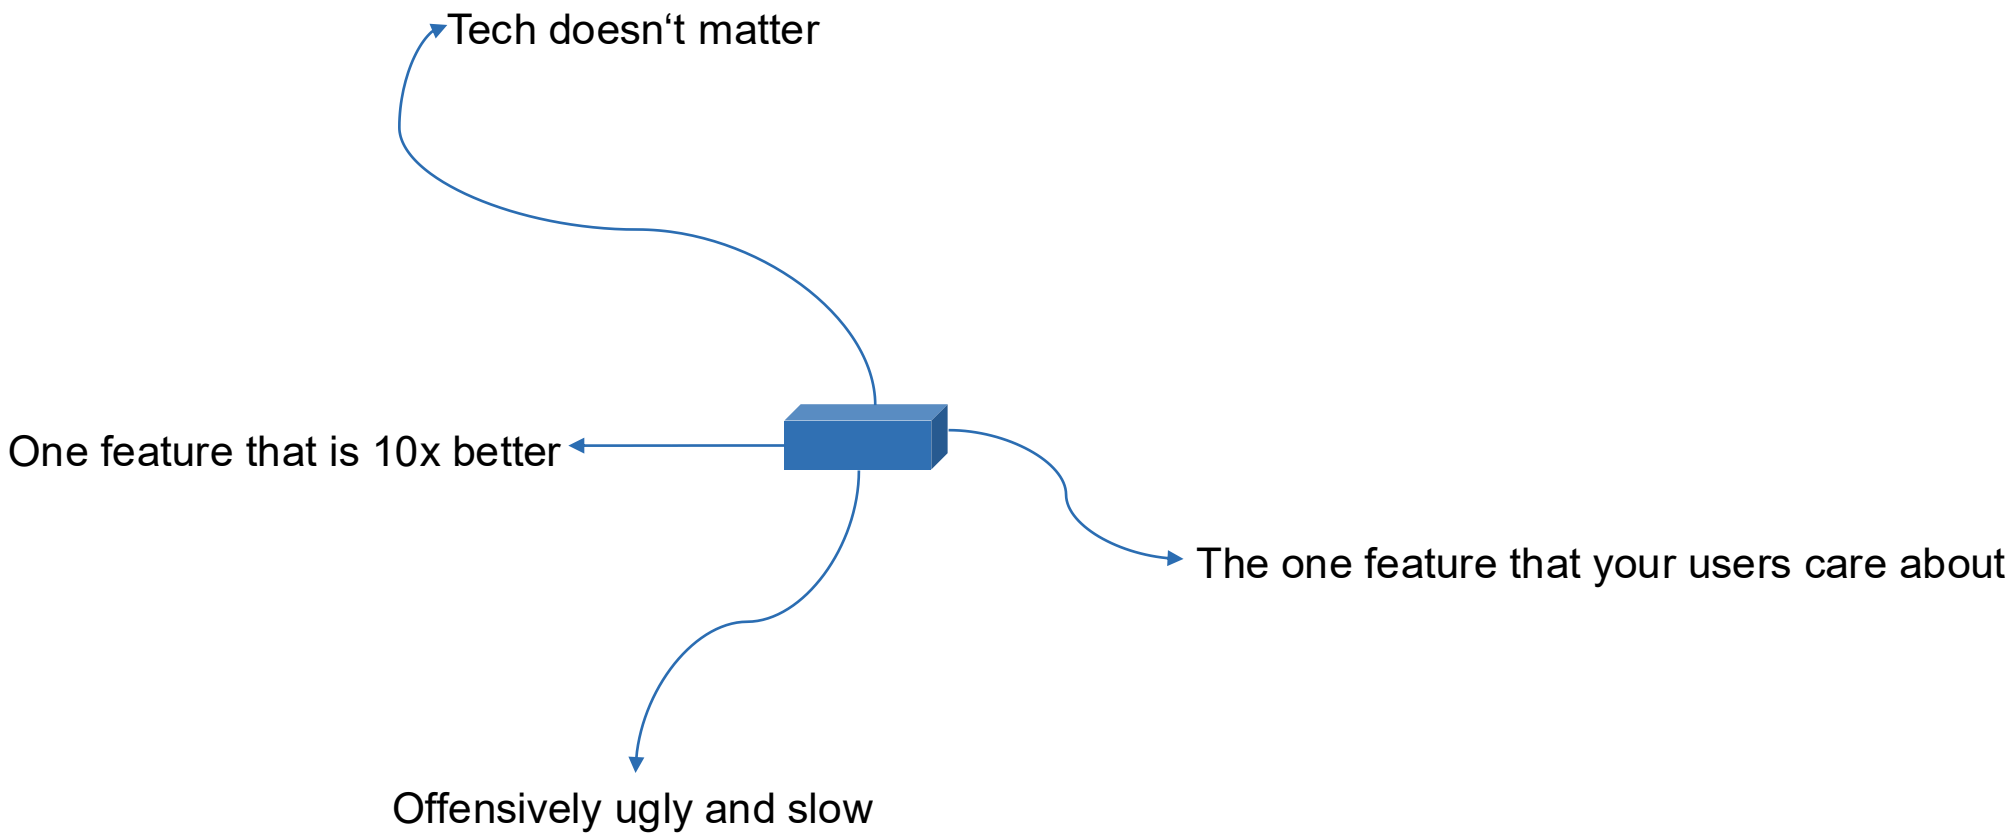

And remember: It‘s 1% inspiration and 99% presperation

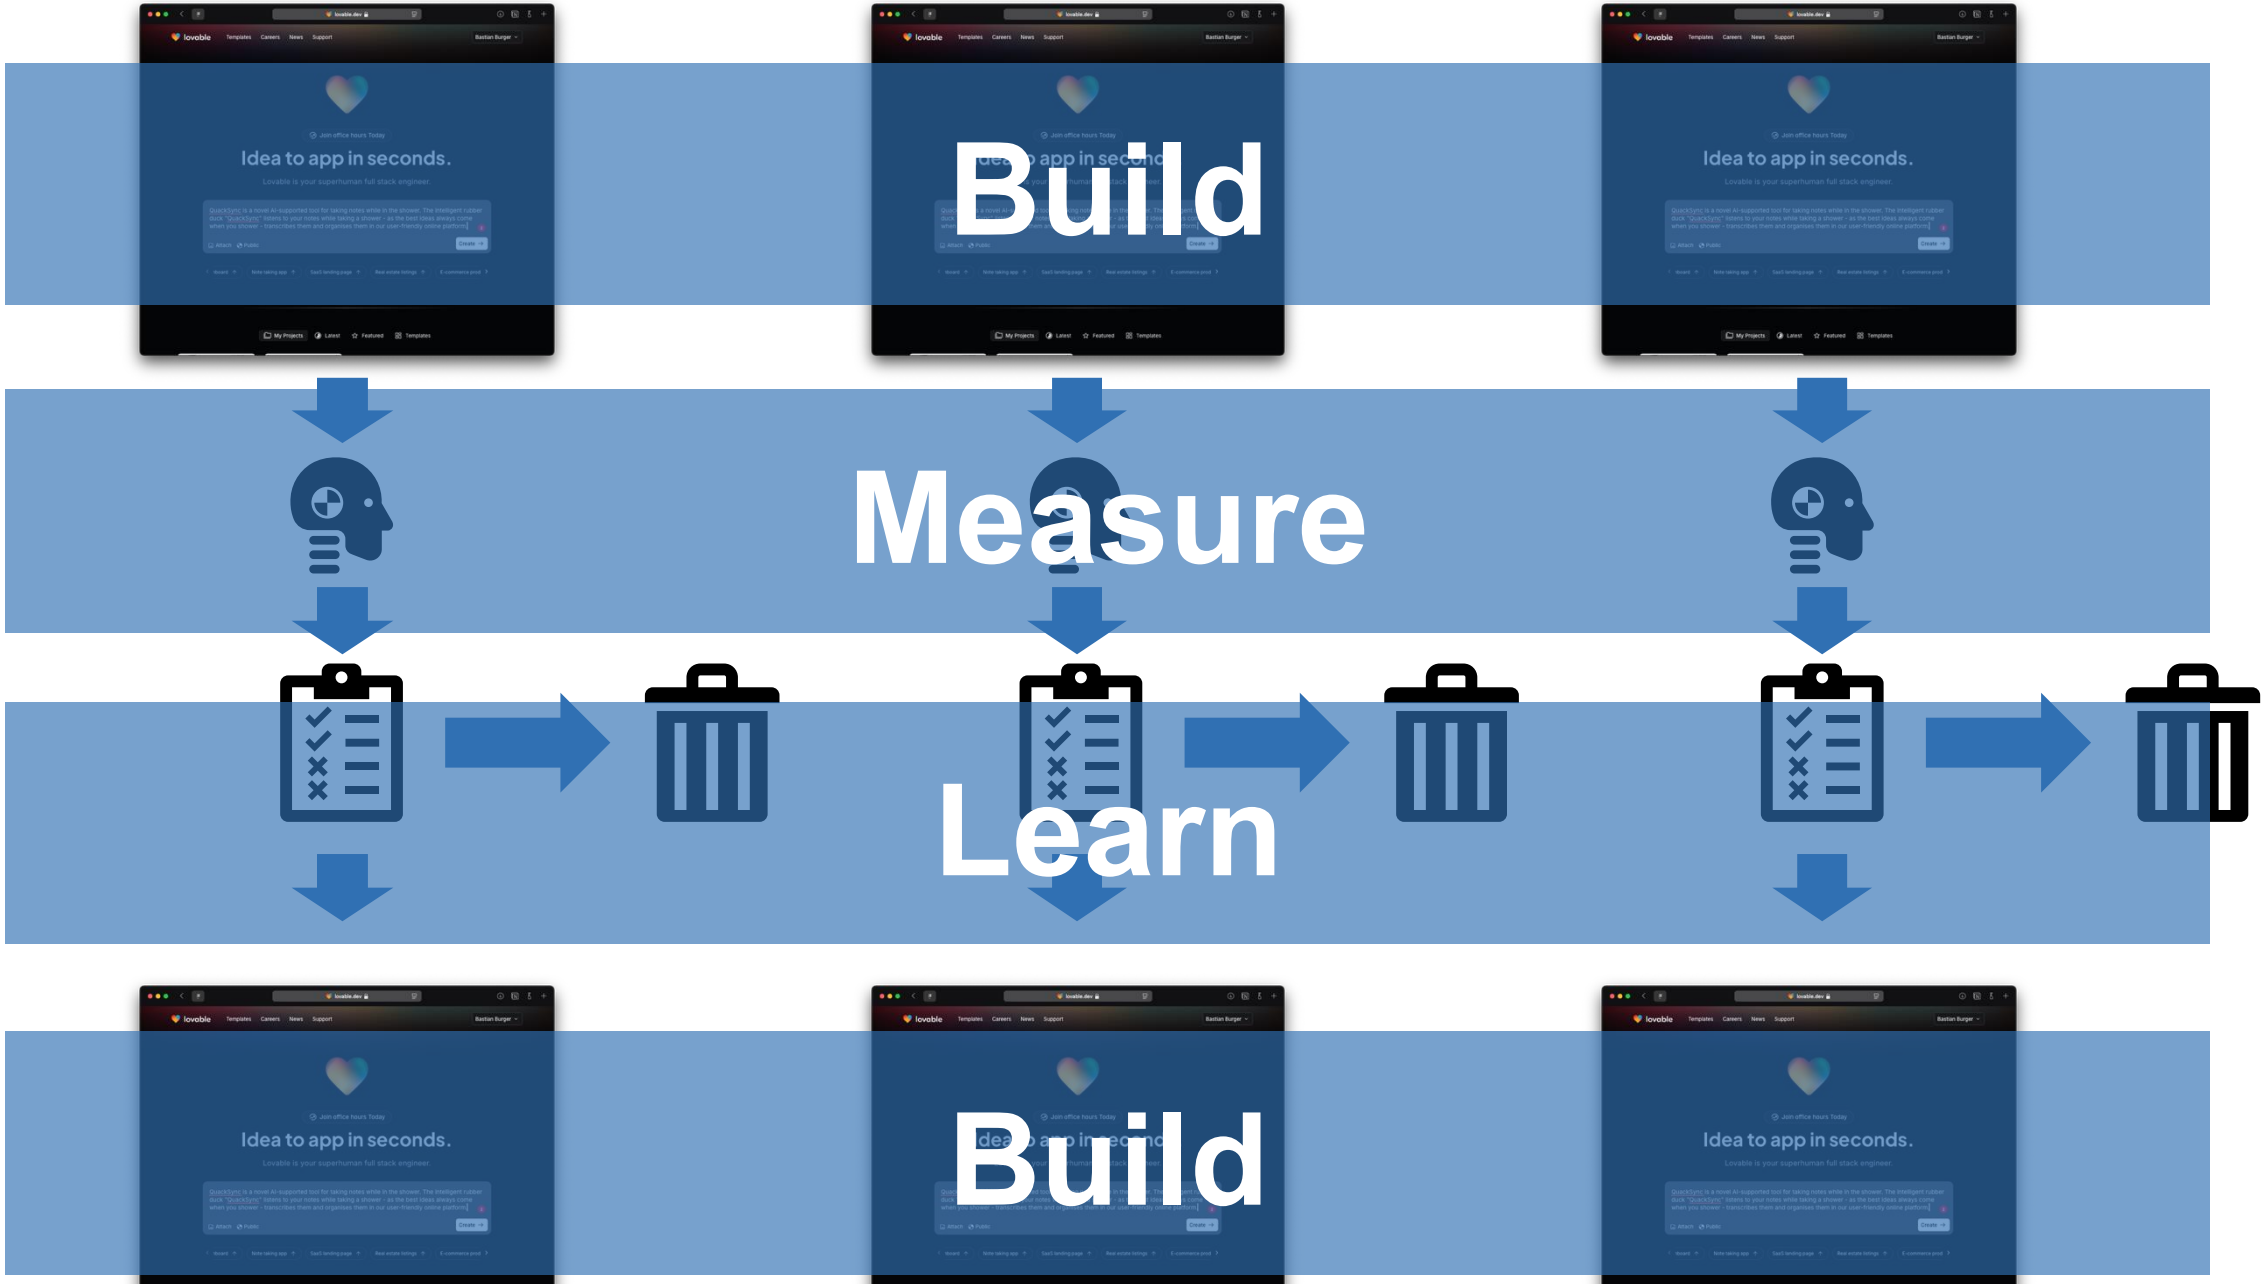

One iteration should not take more thank 4 hours

Your Prototype

Your (real) Prototype

Build
Measure
Learn
Build

RECAP: From Module 5

1. You created a Value Proposition Canvas for your solution
2. You defined your MVP scope with must-have features only
3. You decided: Build yourself, no-code, or partner?
4. Today: We BUILD that MVP using modern AI-powered tools

Tools: Lovable, Bolt, Cursor, Claude, Make.com, Airtable, v0

Your Presentations

Show us where you‘re at in 3 Minutes or less!

What did you do?	What did you learn?	How can we help?

Make it credible:

1. Facts: Statistics or Research: What do they say? What does it mean? Where are they from?

2. Numbers: Usage or Surveys: How were they reported? How did they change? Why is it relevant?

3. Quotes: Interviews or Testemonials: What did they say? Why did they say it? What could this mean?

4. Images: Screenshots or Users: What happened? What changed? Why is it relevant?

Note 1: On building anything but software

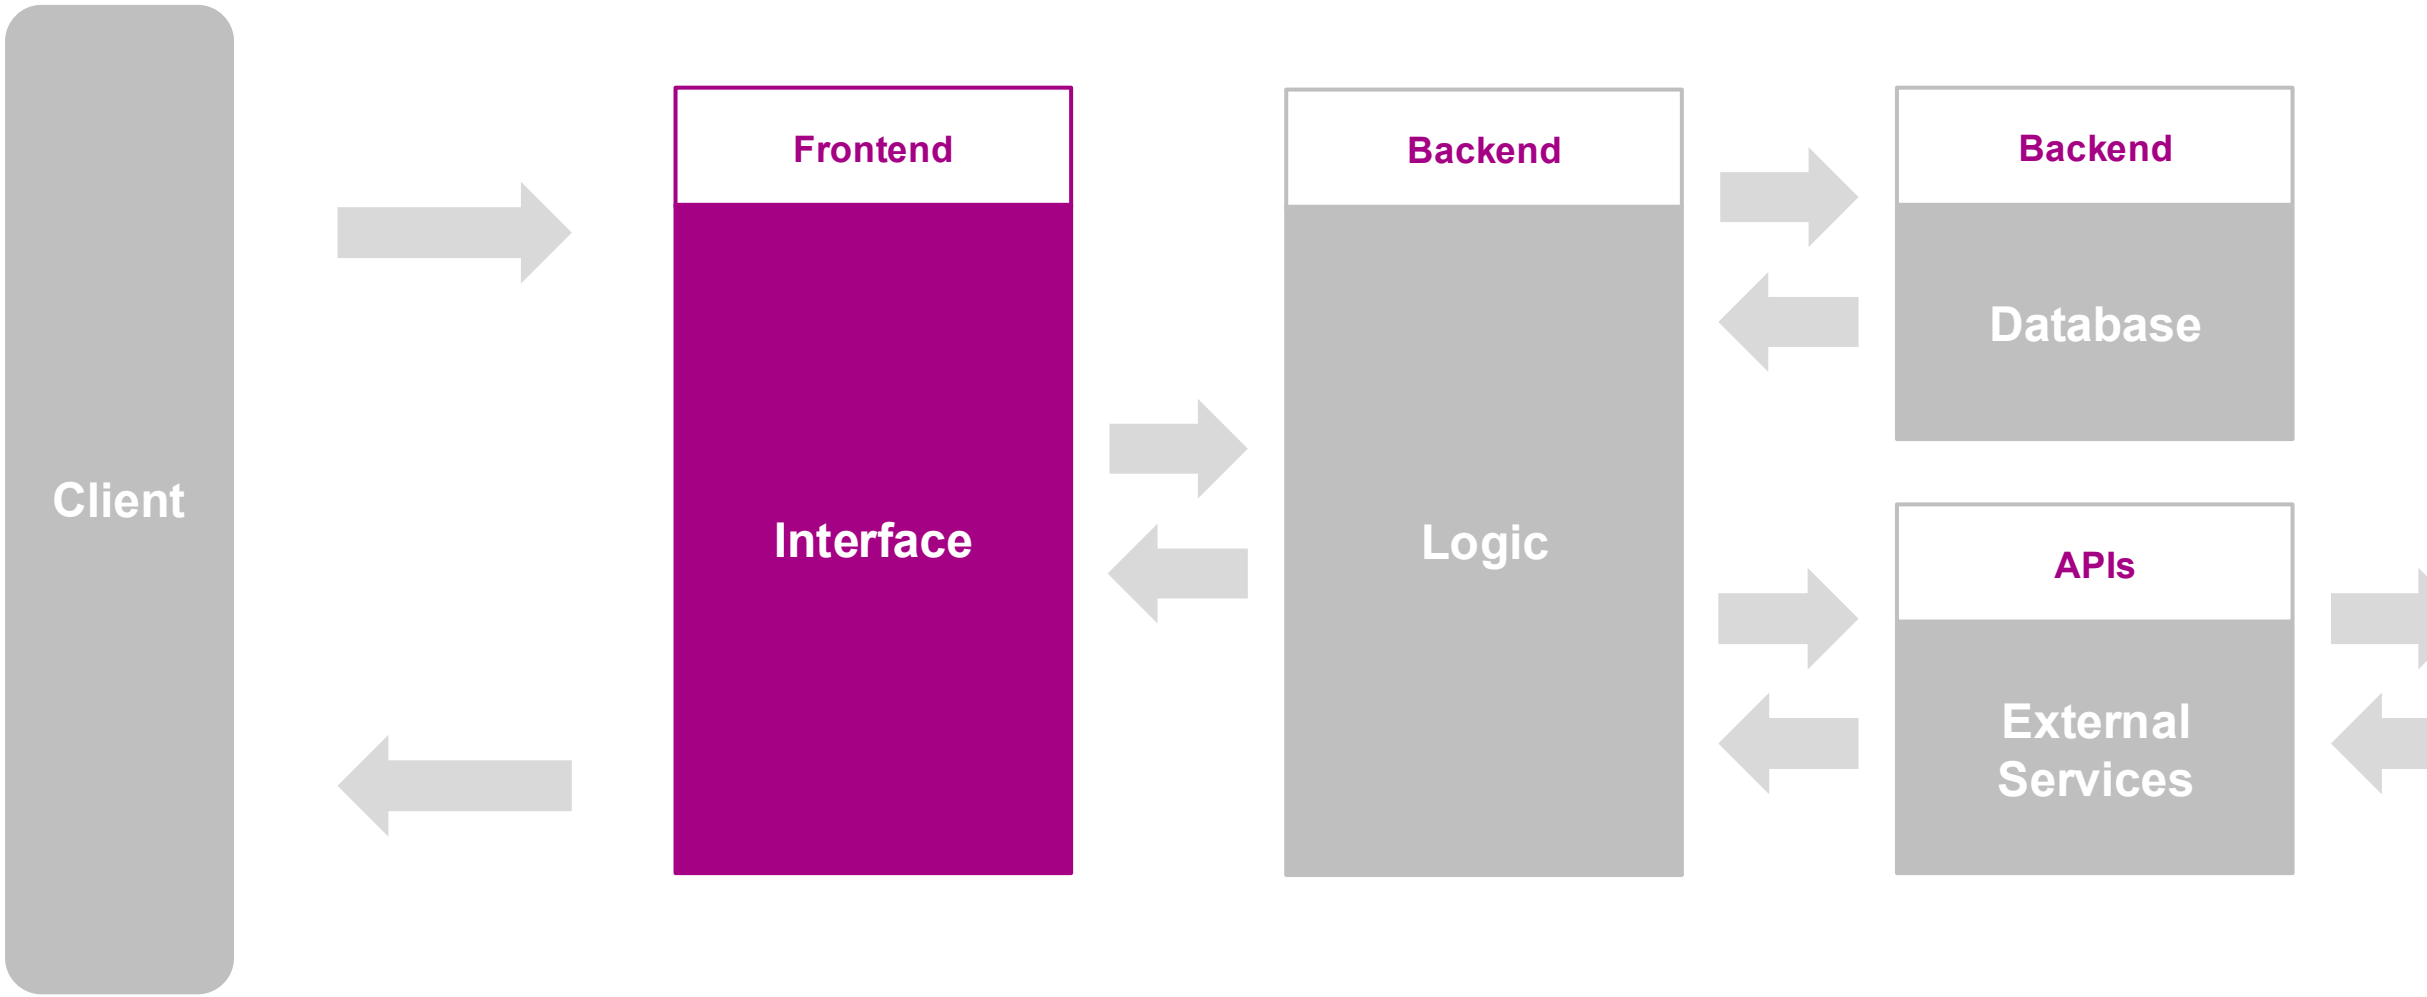

Tech-Solution & Business Solution

„But I cannot build a maglev-monorail in 4 hours or less!“

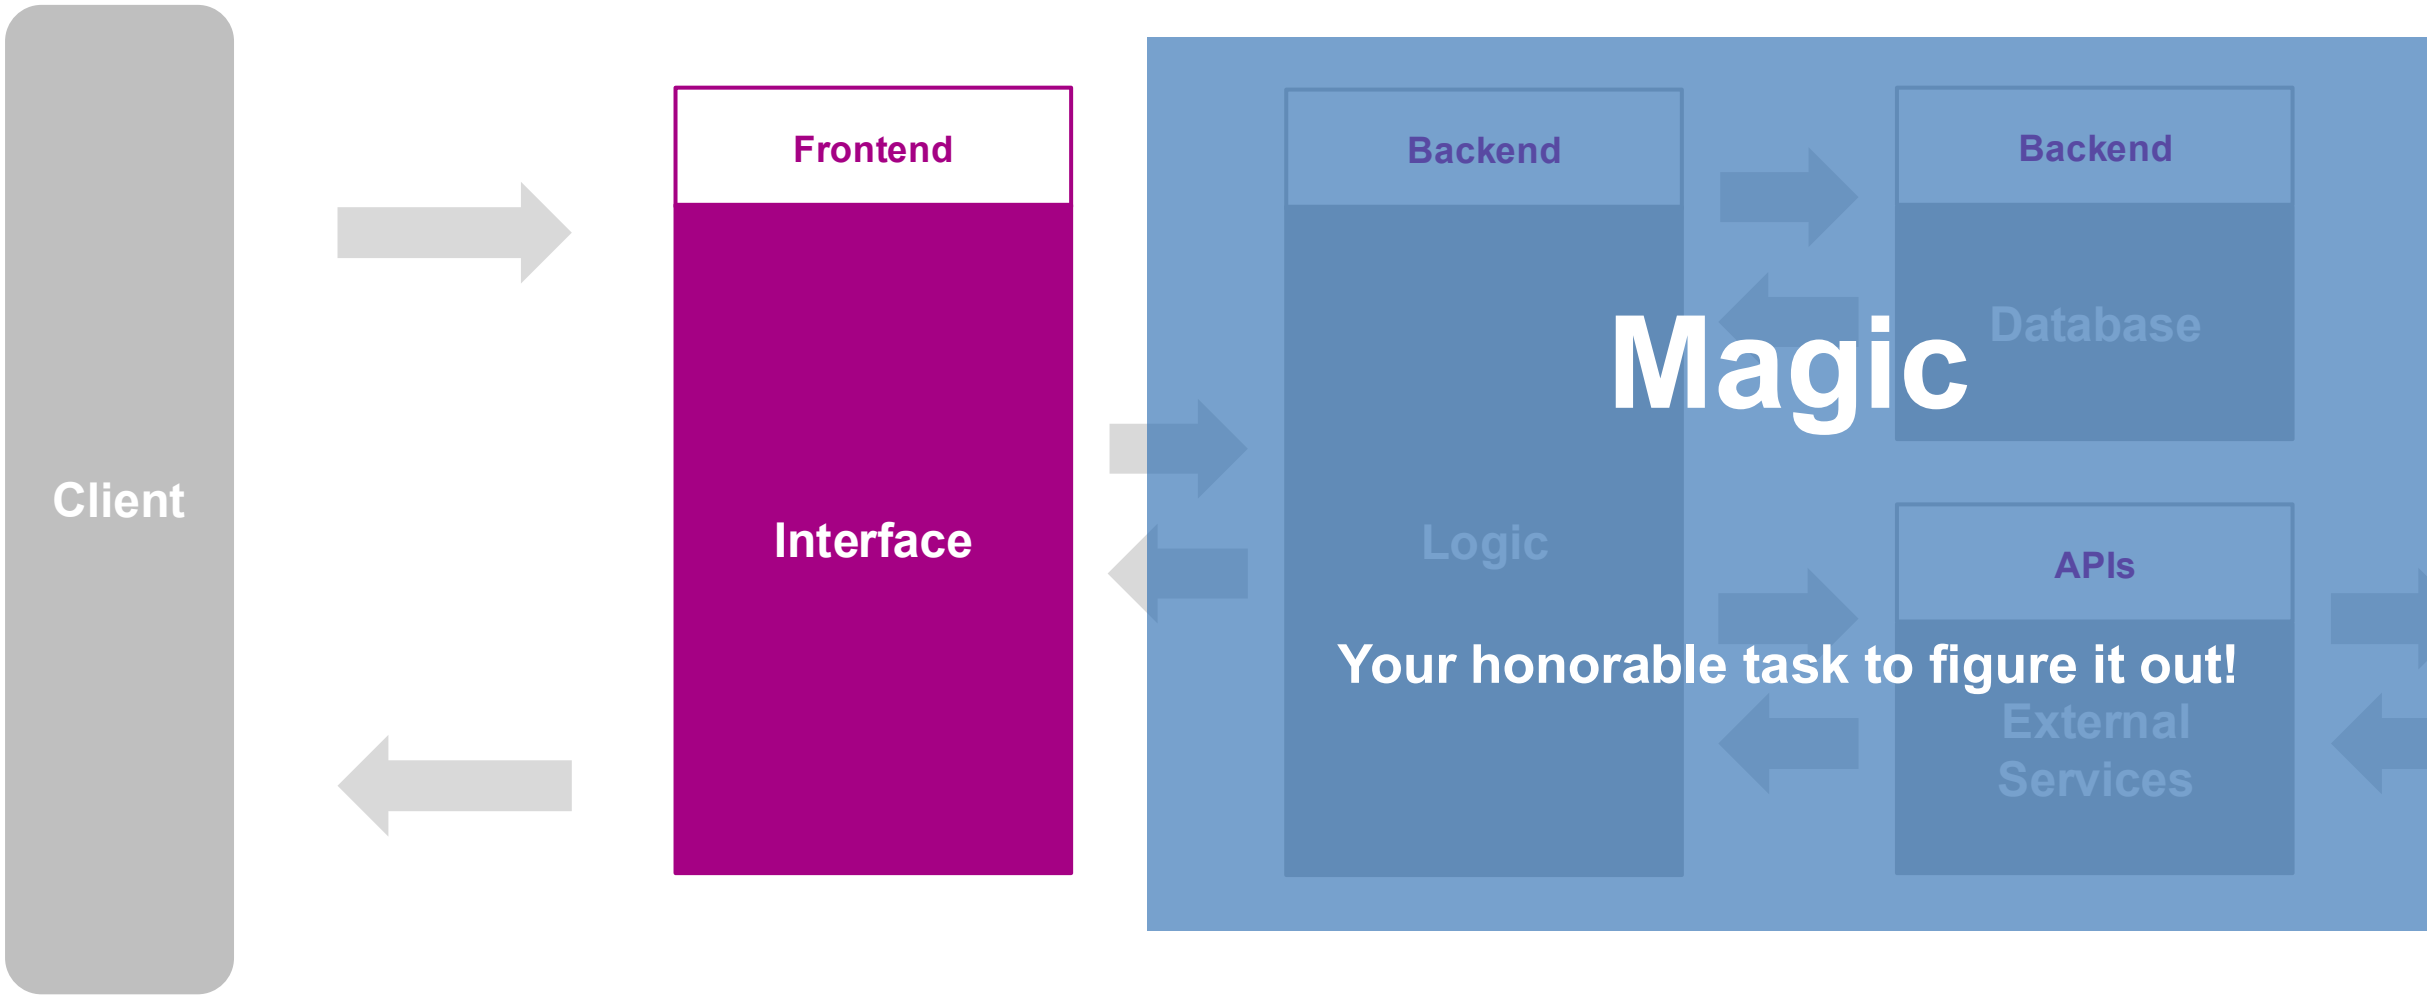

Business Solution:	Tech Solution:
Does the market need a solution?	**How can we deliver the service at scale?**
What is the market willing to pay for it?	**Can we build reliably under a budget?**
What we do here.	The Deep Tech solution <>
Solve this first.	Straight forward for SaaS or e-Commerce.
Will give you constraints on your tech solution.	Needs to fit the business constraints.
	The simplest solution will win the market.

Solution looking for problem:
Tech Solution (i.e. from Research) → Business Solution → Problem Space
Insanely hard process => Avoid

Think Interface first

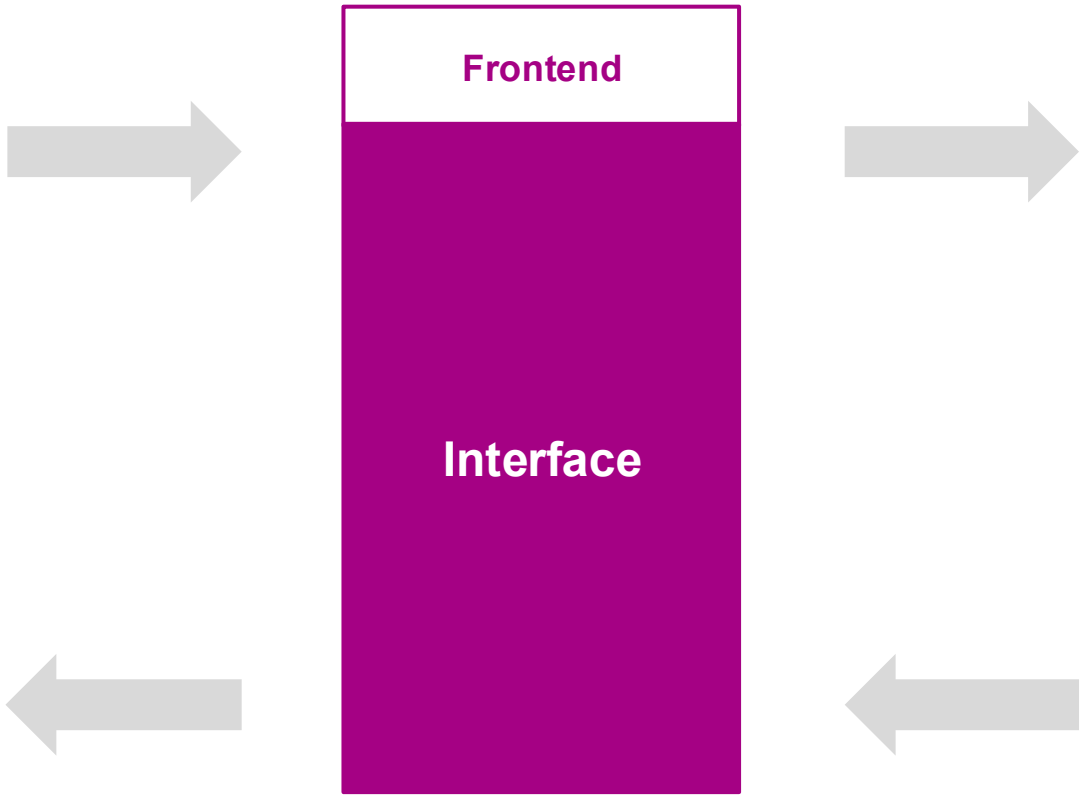

IF anything behind the smoke and mirror worked, would they love it?

IF anything behind the smoke and mirror worked, would they love it?

- I want to launch satellites to space…
- I want to get anywhere from anywhere in the city…
- I want my household to run itself…
- I want to get a fresh coffee anytime in 10 minutes…

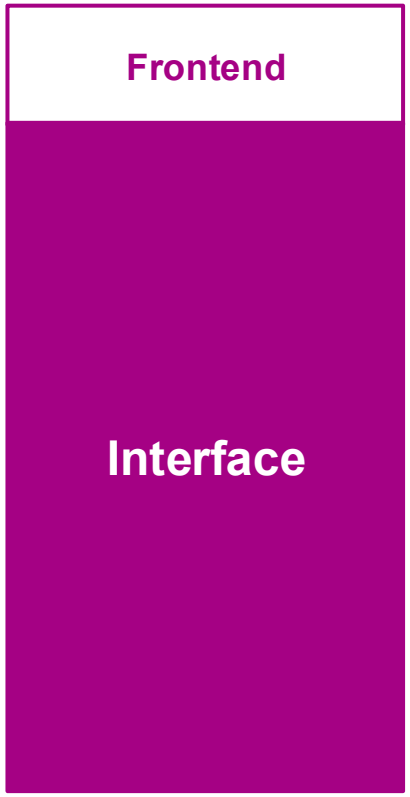

- What if I had a rocket?
- What if I had an autonomous car?
- What if I had a humanoid robot?
- What if I had a coffee delivery service network?

Customers don‘t care HOW you do it!

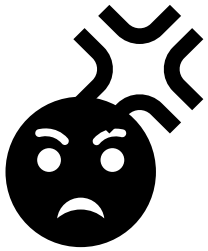

Note 2: Stuck on your Value Proposition=

Finding customer nieches with 10x pain-points

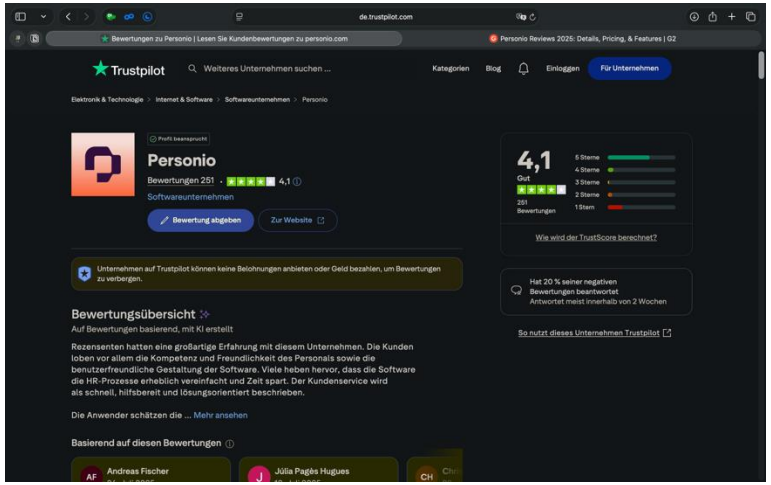

Where are your users talking about their services?

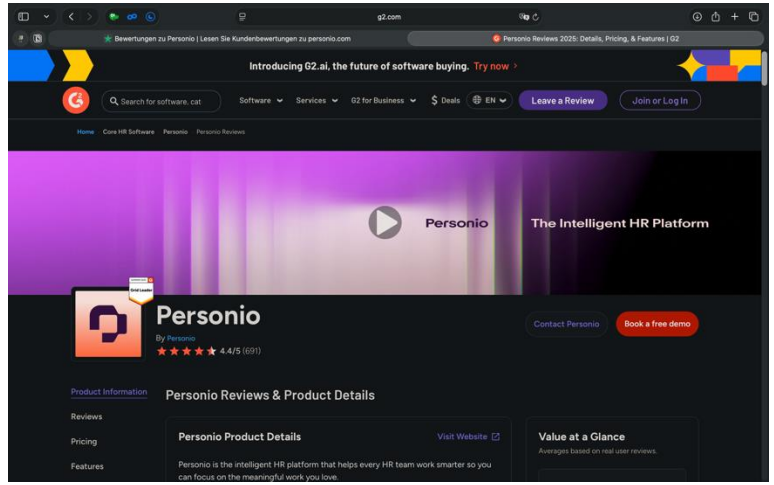

What do the dissatisfied users have in common?

Customers have a voice online. Let it be your guide.

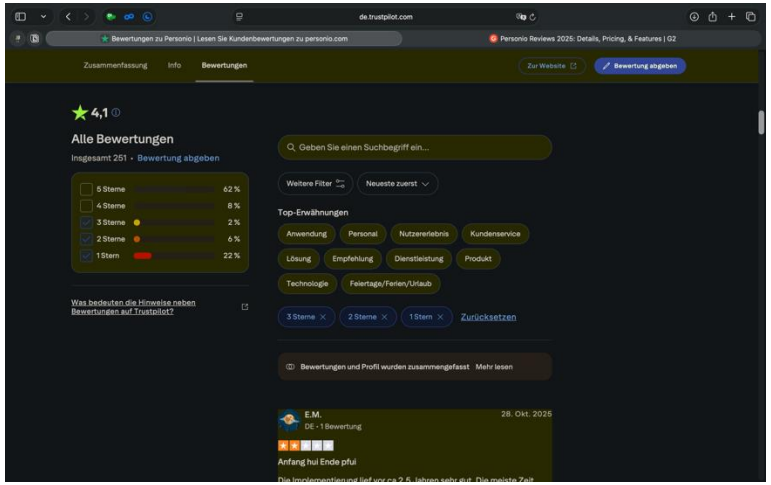

By now you should understand your market and your competition*

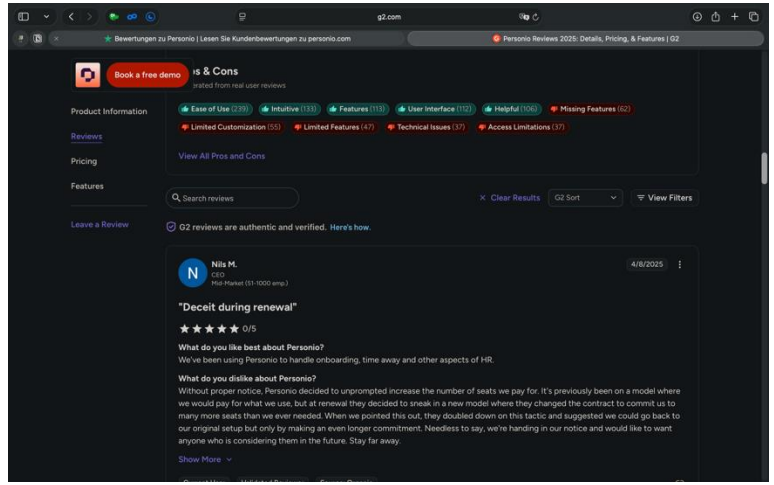

*if you belive there is no competition, you are in big trouble.

Customers have a voice online. Let it be your guide.

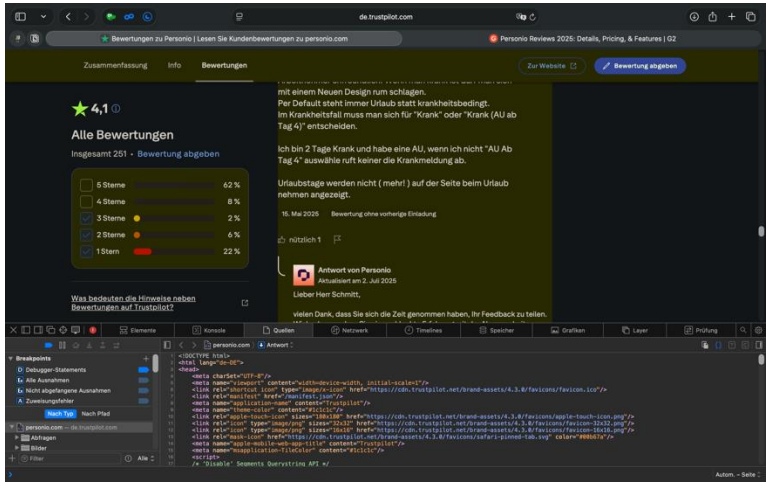

What do the disgruntled (0/5, 1/5, 2/5, 3/5) customers say?*

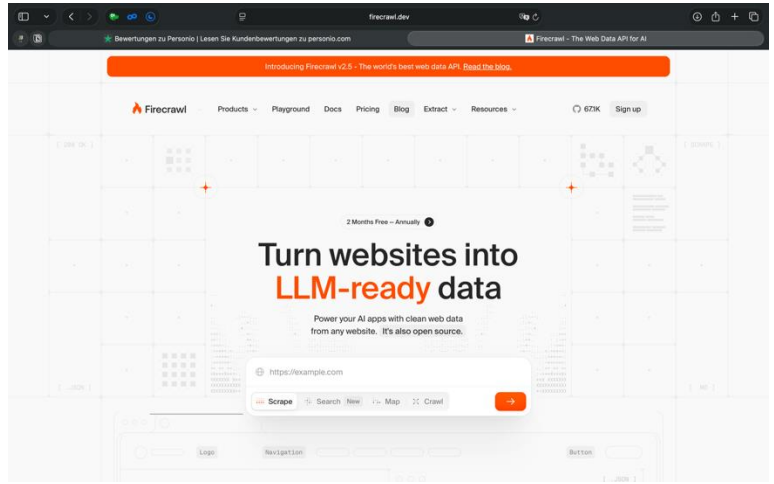

*correct for those, you are just unhappy with a single interaction.

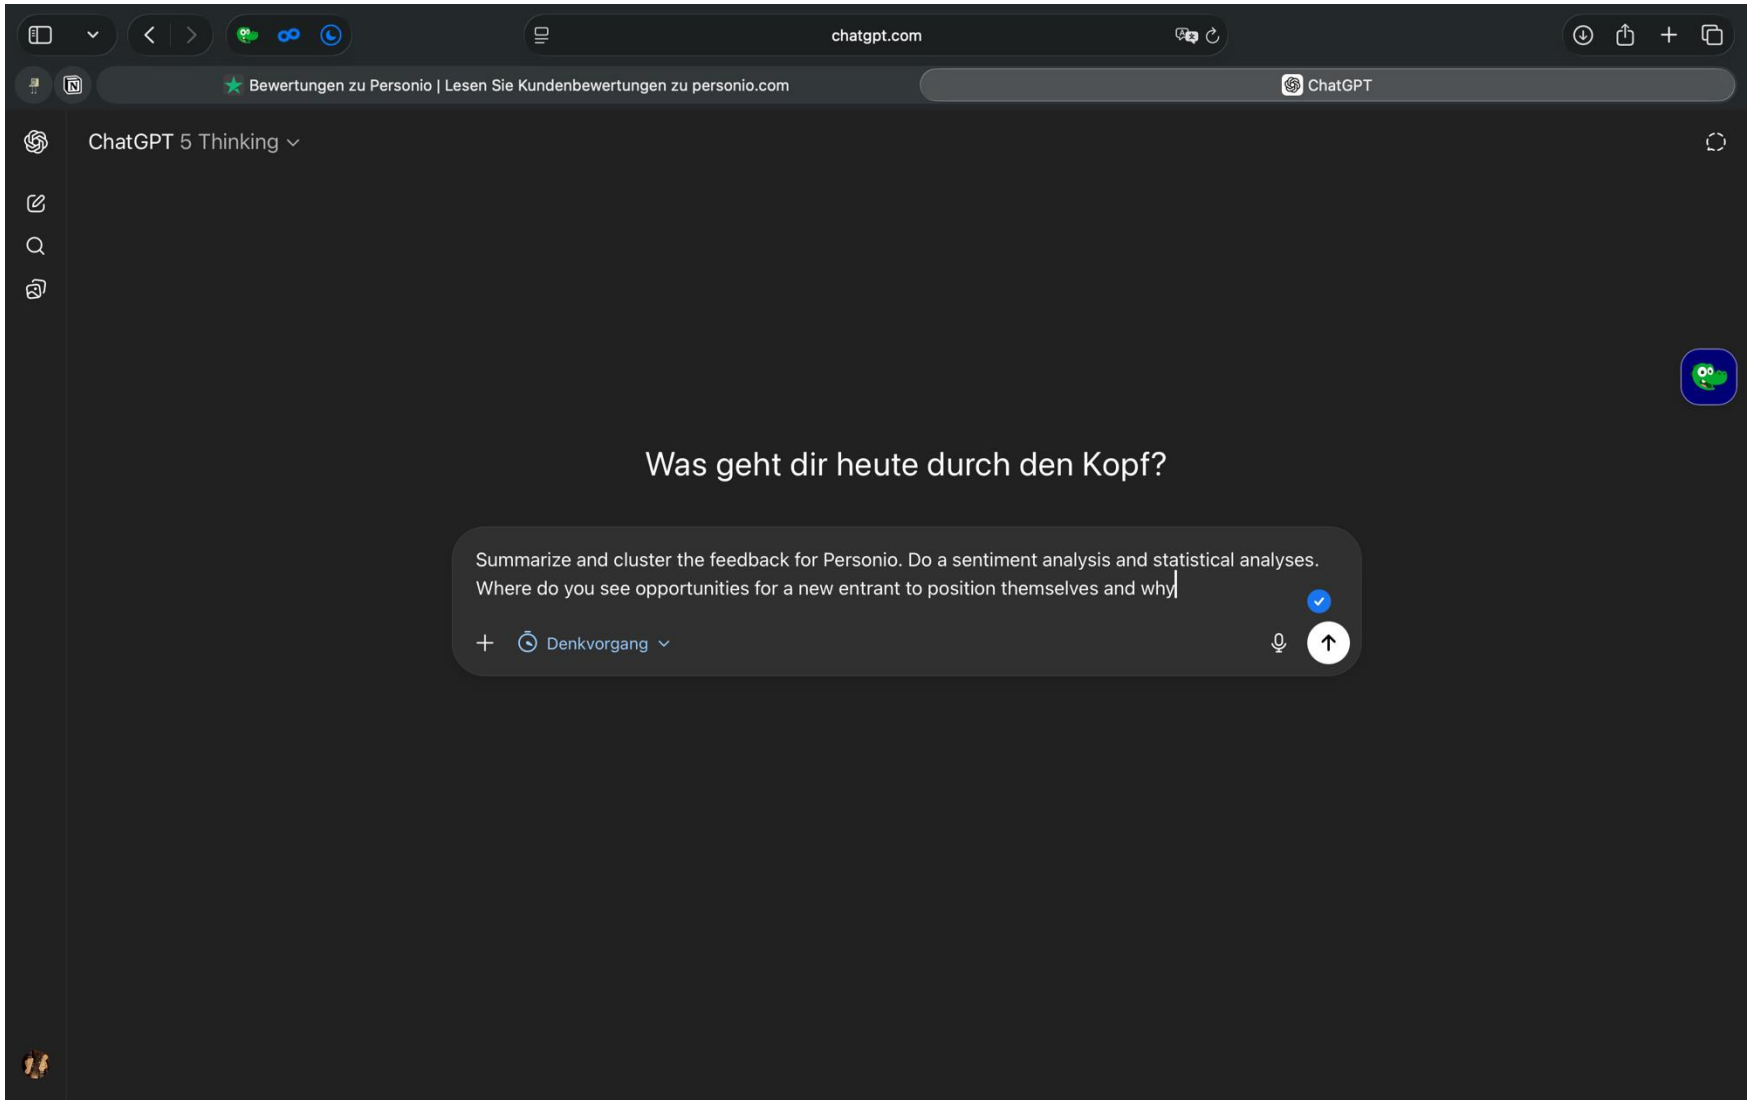

Customers have a voice online. Let it be your guide.

Download or scrape the data.

Customers have a voice online. Let it be your guide.

Let‘s jump in!

IT'S DANGEROUS TO GO
ALONE! TAKE THIS.

Now you might want to make use of your team!

7 user interaction

1.400 impressions

10% WoW user growth

Now you might want to make use of your team!

Interviews

Engagement

Product Building

Now you might want to make use of your team!

P. Understanding

P. Validation

S. Product-Market-Fit

Build things that don‘t scale

Setting the mood

“If you are not embarrassed by the first version of your product, you’ve launched too late.”

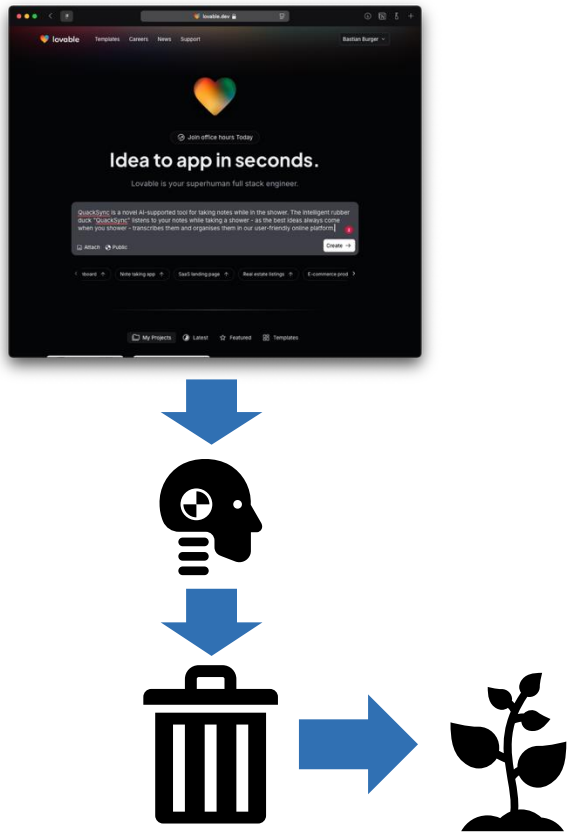

Reid Hoffman, the co-founder of LinkedIn

Let’s get embarrassing!

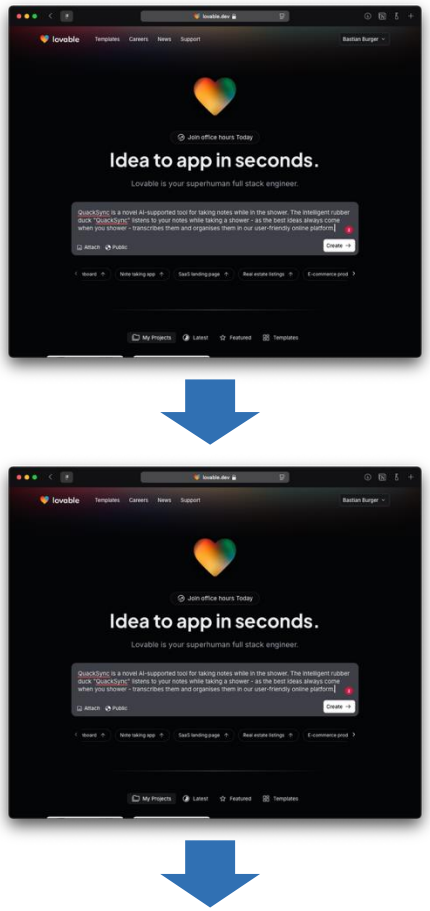

Now, we are building to get users

Build to find a seed for our solution:

(Divergent thinking, going broad)

Build to improve on the solution:

(Covergent thinking, going narrow)

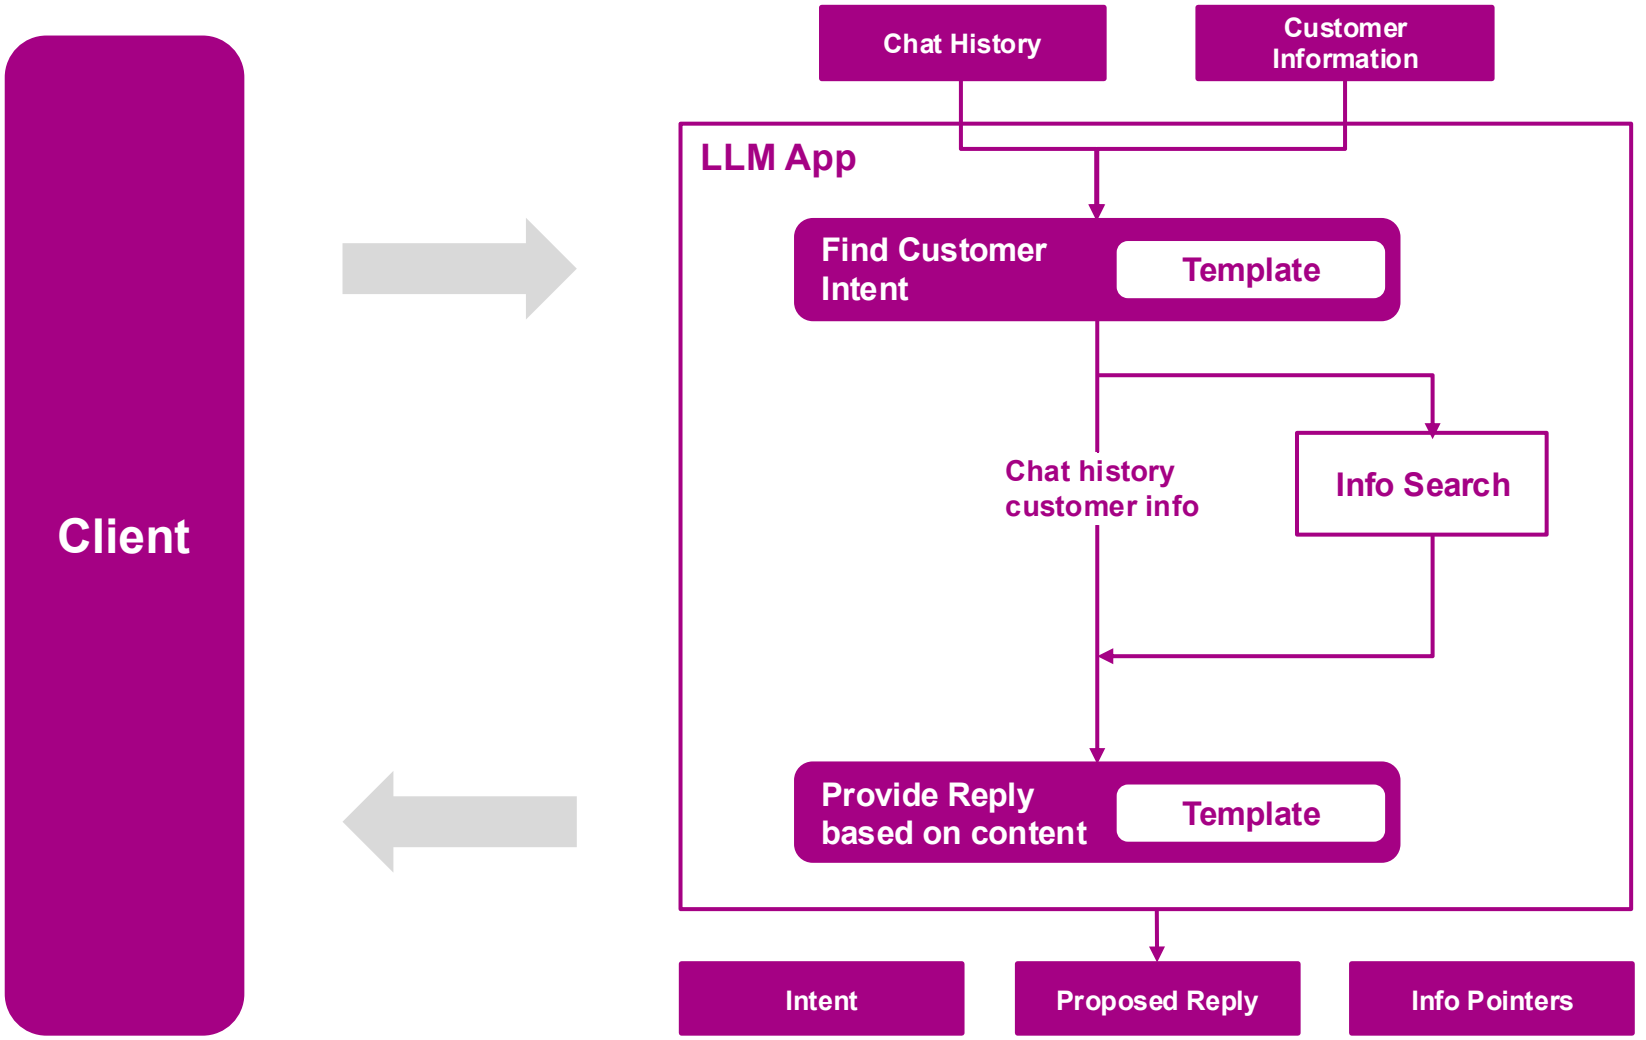

Tooling to test a solution space => **Theory testing!**

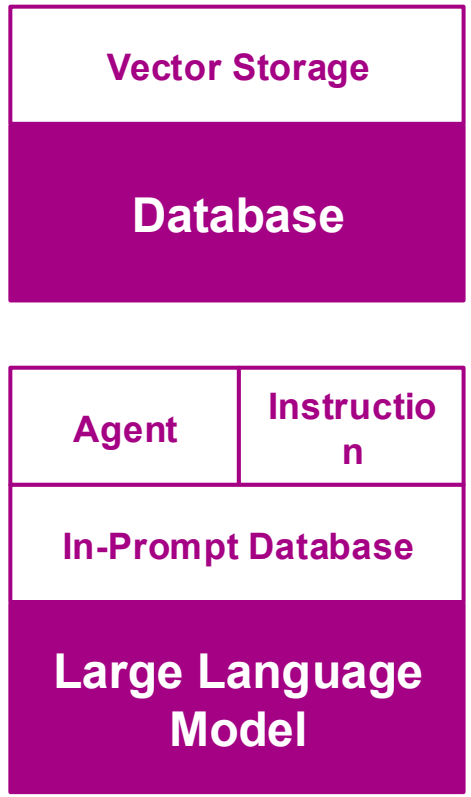

Every software product ever

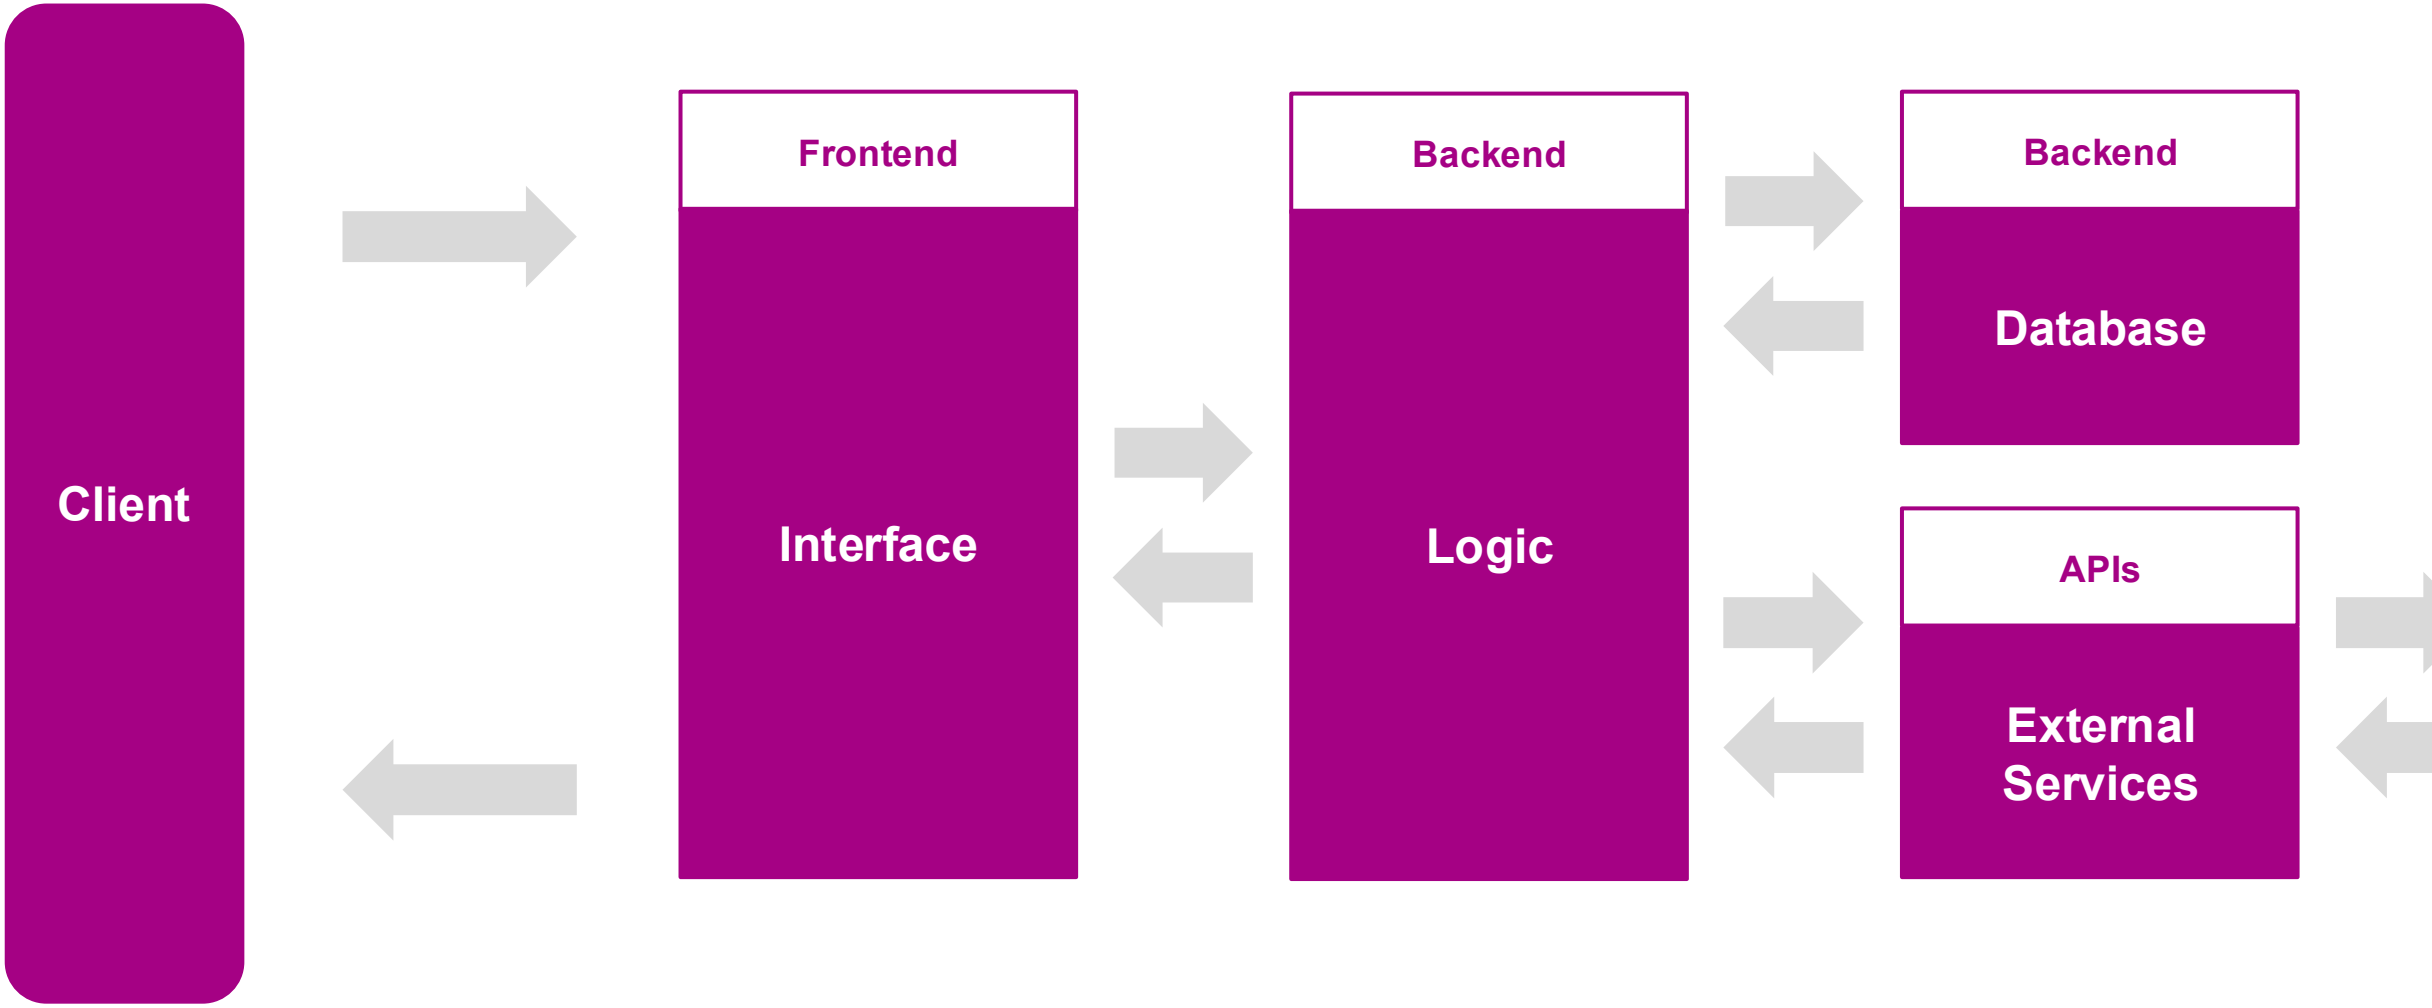

Your shortcut of becoming a software architect

Example: AI Chatbot

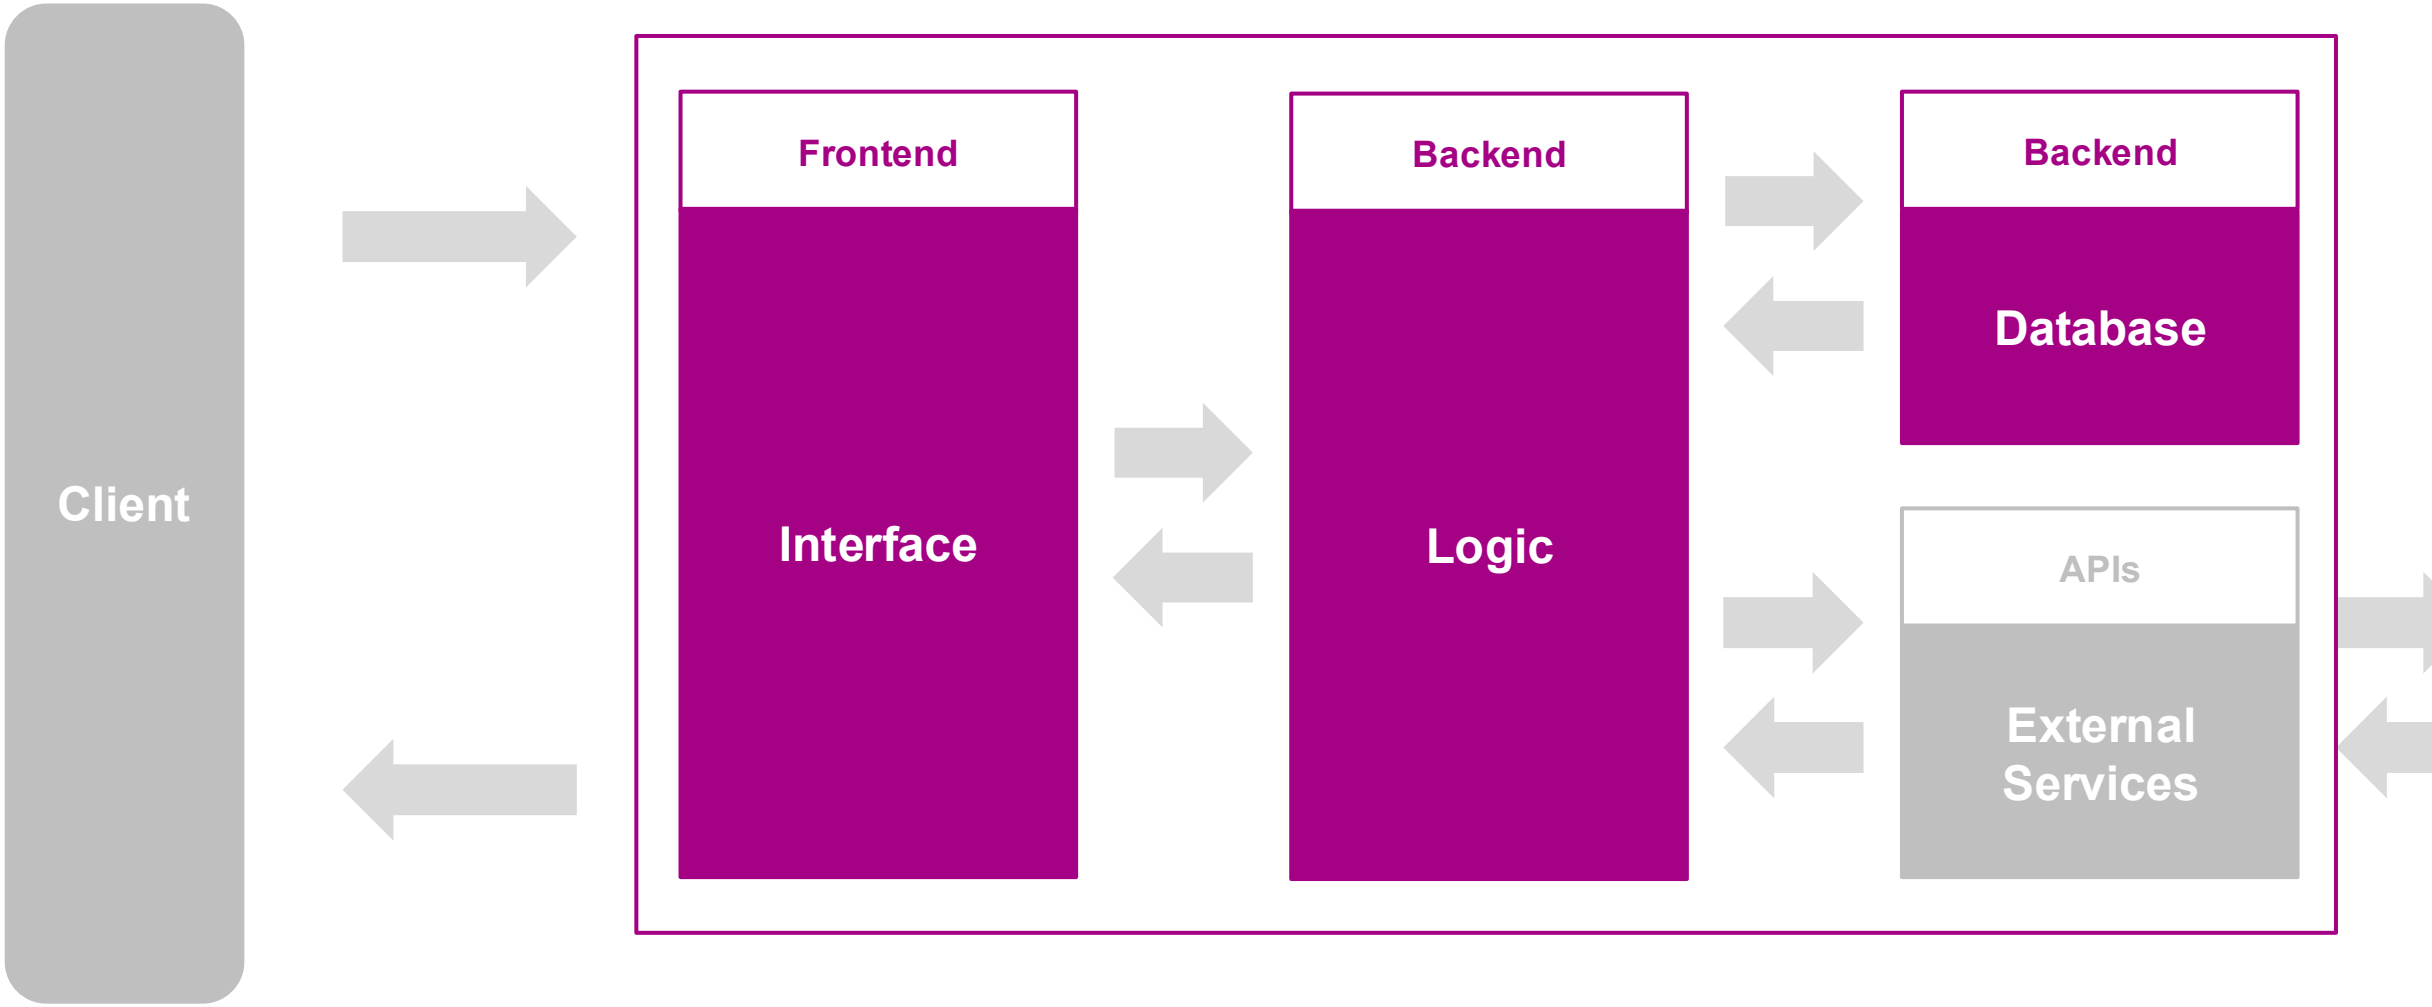

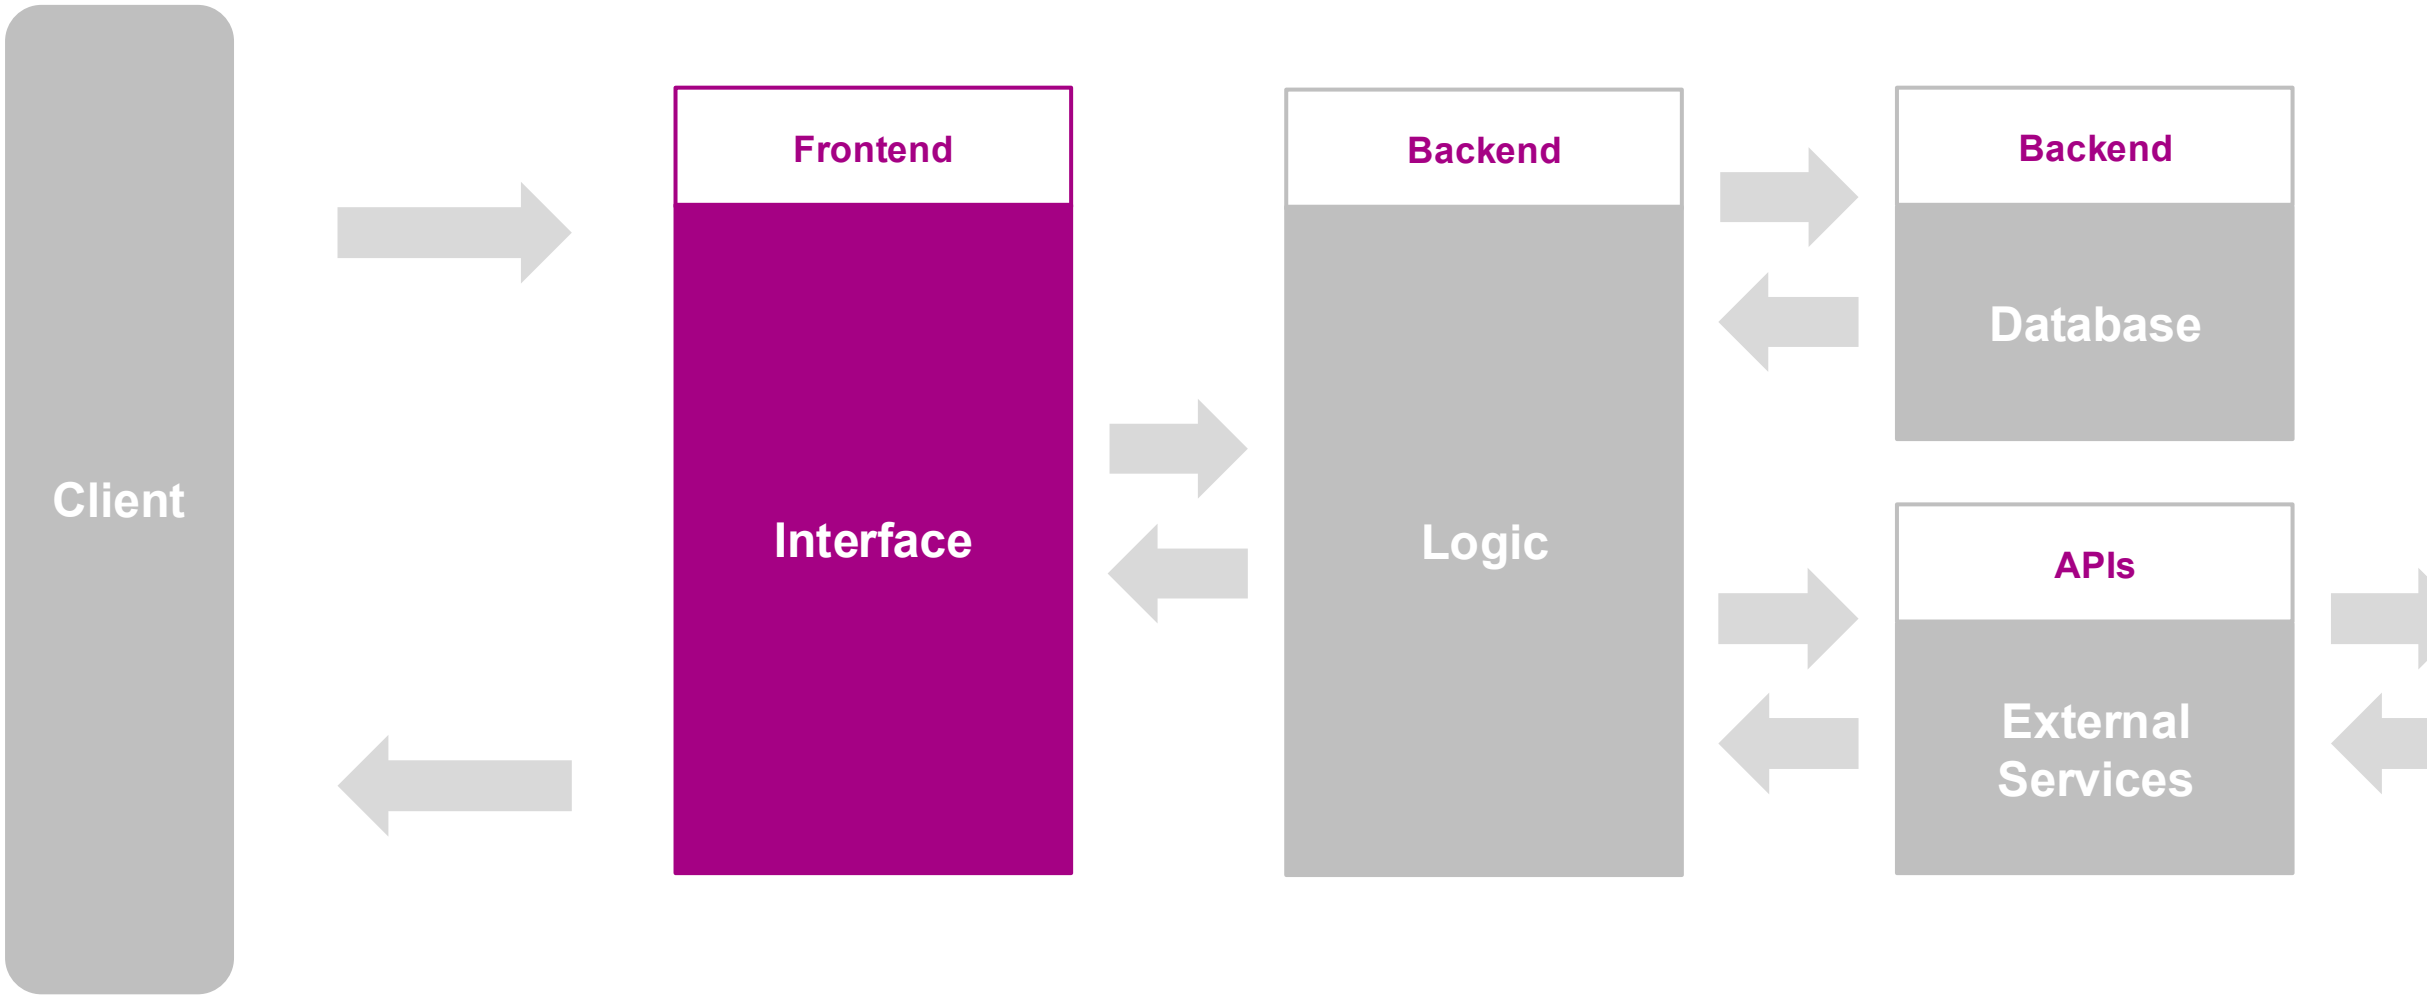

Every application ever

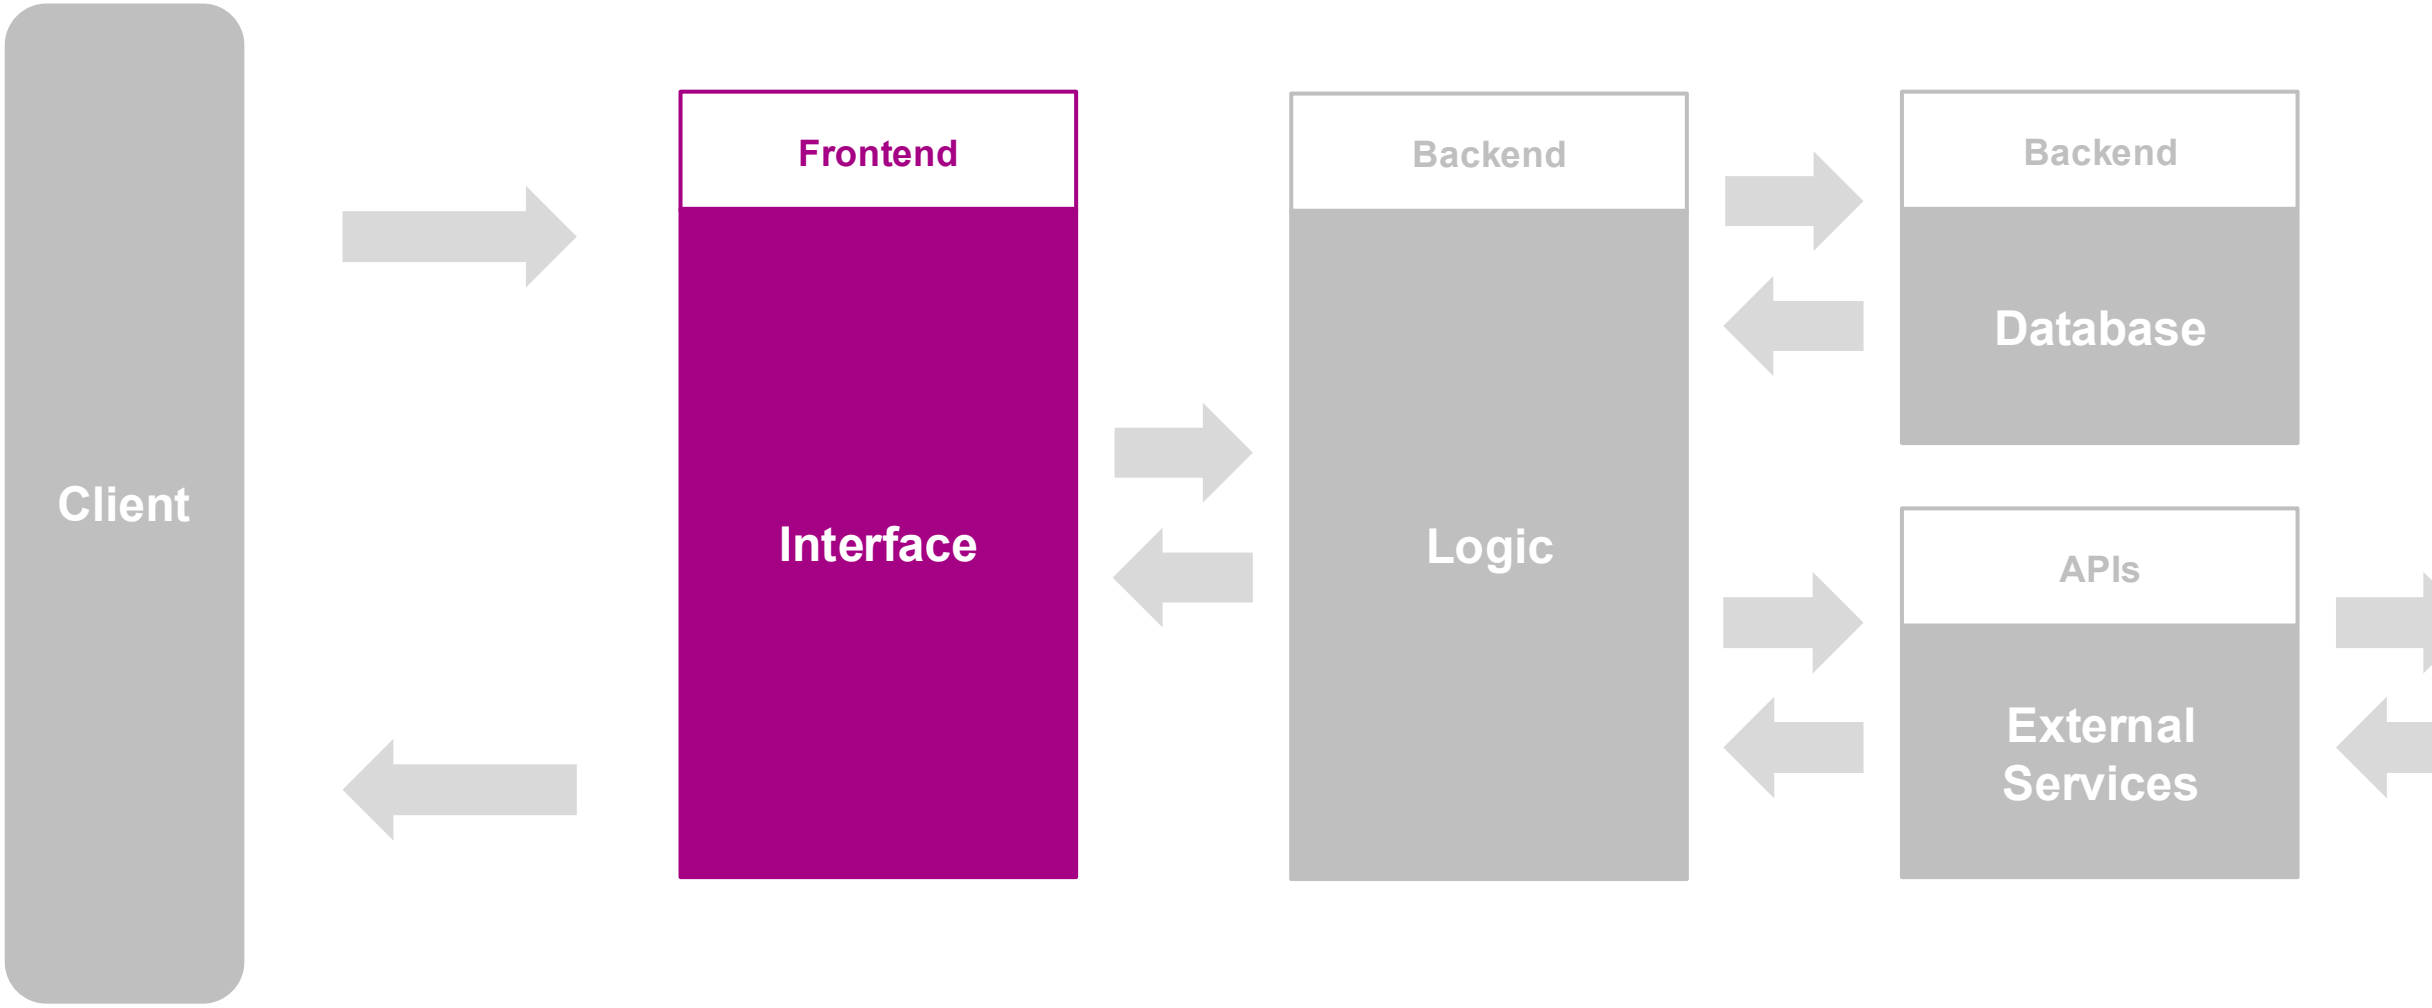

Every application ever

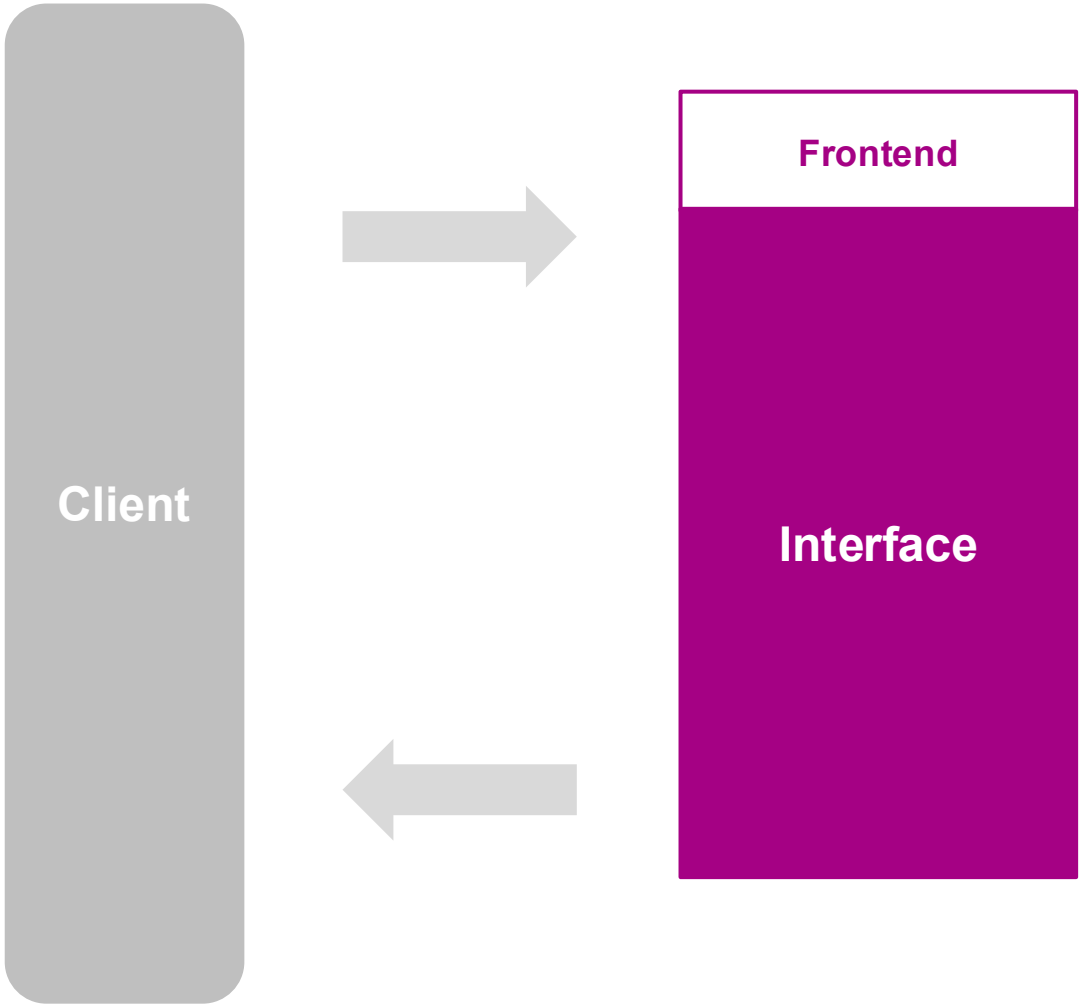

Prototyping every considerable service

INTERFACE: The interaction layer with the client

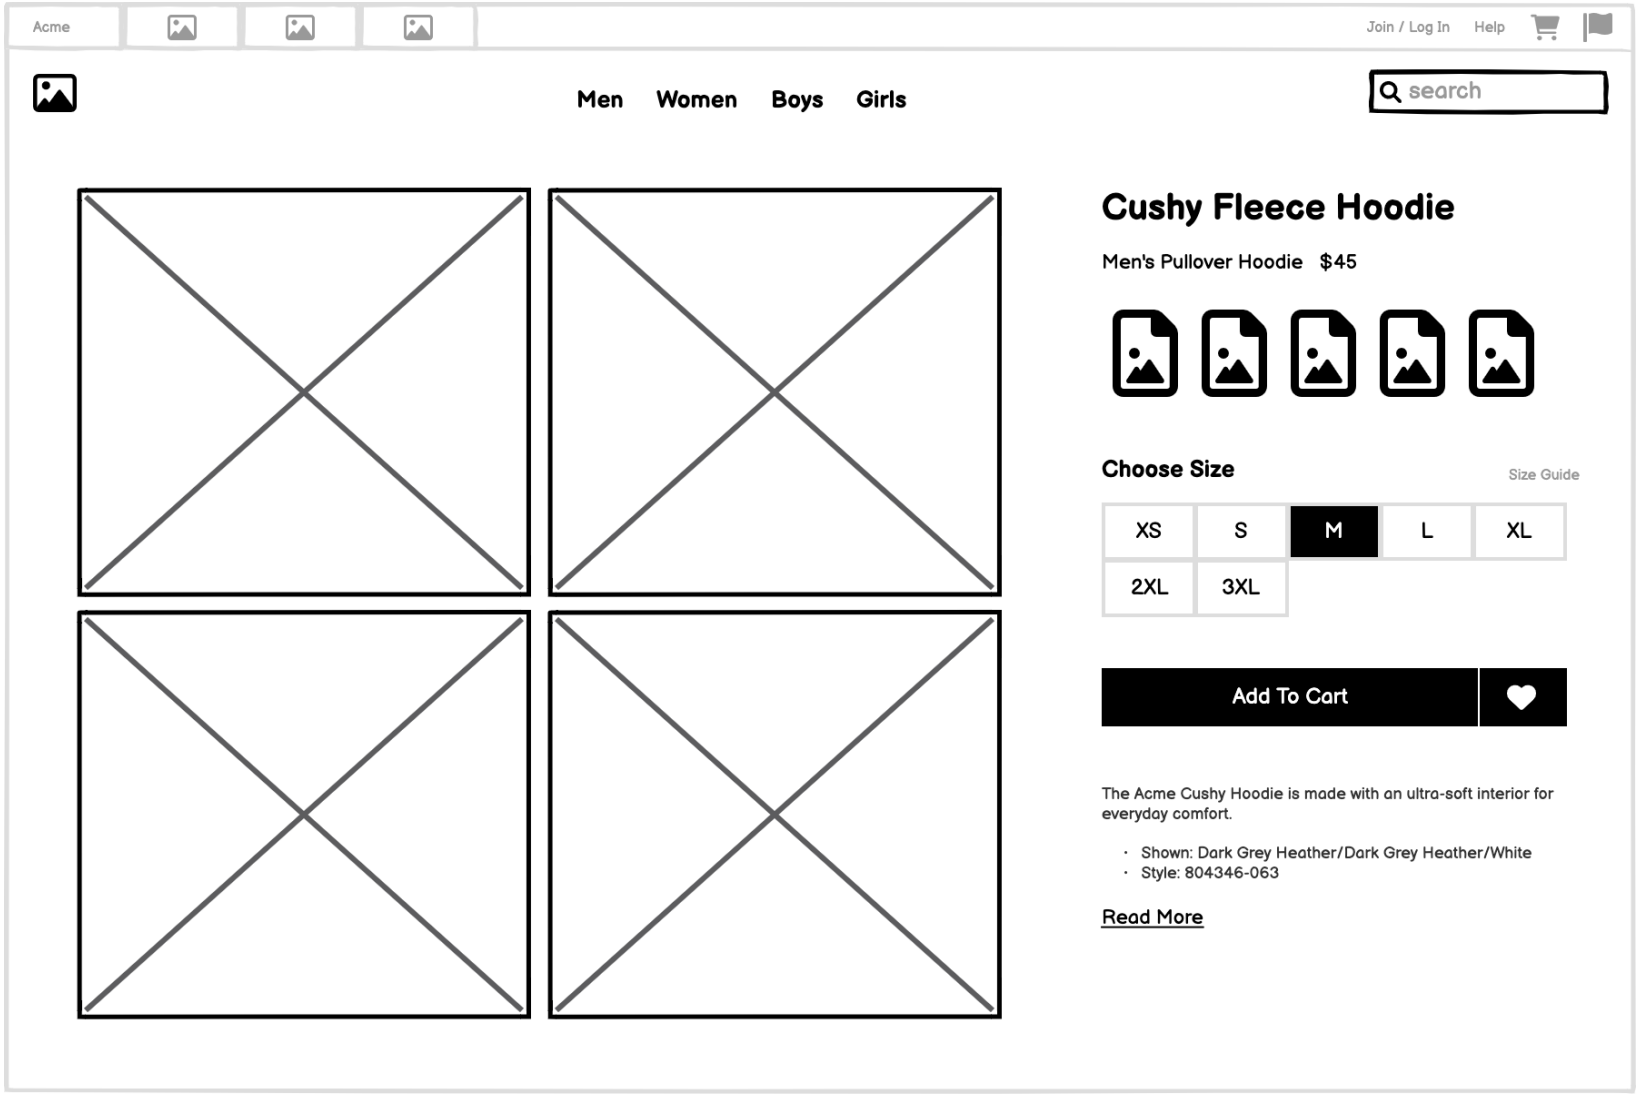

INTERFACE: The interaction layer with the client

Think about the interface:

1. What is the client‘s objective?
2. What info do you need to fulfill this objective?
3. What does the client need from me?
4. What form does this have?
5. What interactions do we need?
6. What interactions do we expect?

Wireframing a Frontend

INTERFACE: The interaction layer with the client

VENTURE LABS

No Code

You are the receiving point

- Email or Message to your account
- Typeform where you respond to the responses
- A click dummy or wireframe

Low Code

A tool is the receiving point

- Message you collect automatically
- Website you build quickly
- Chat interface on your server
- Usable UI with buttons

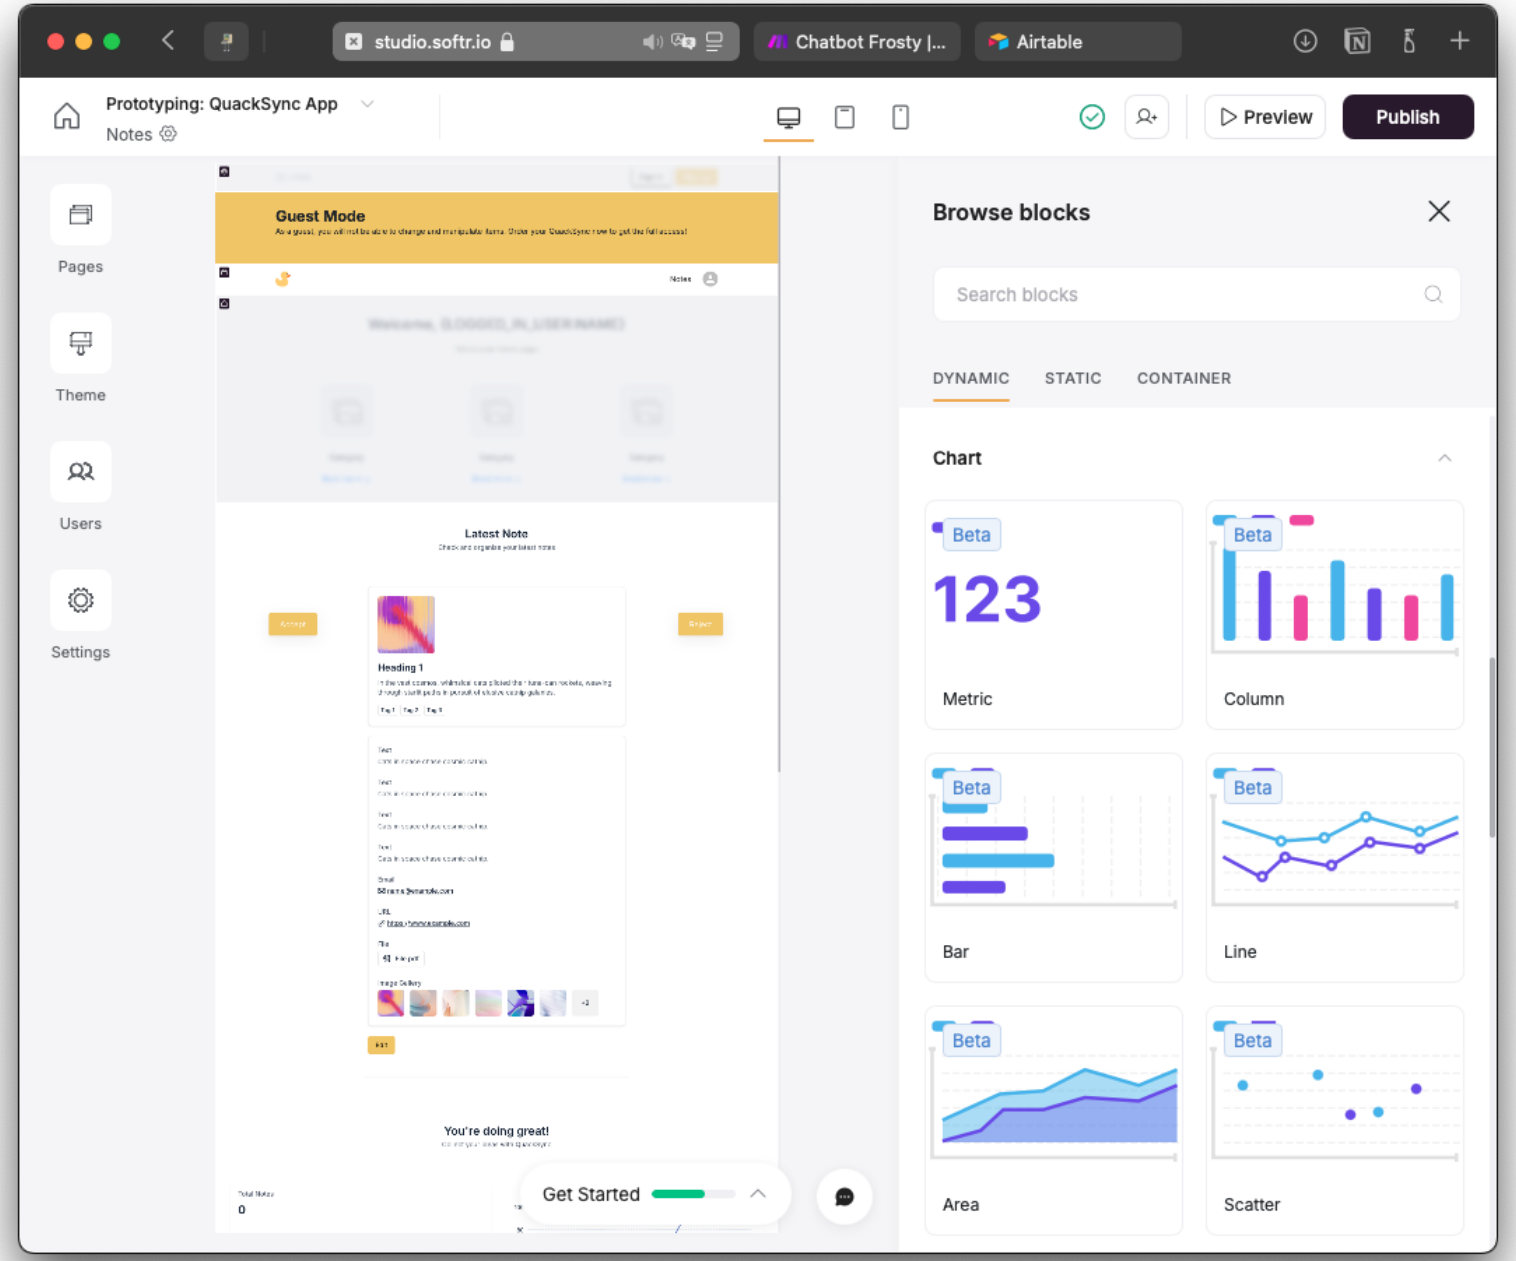

High Code

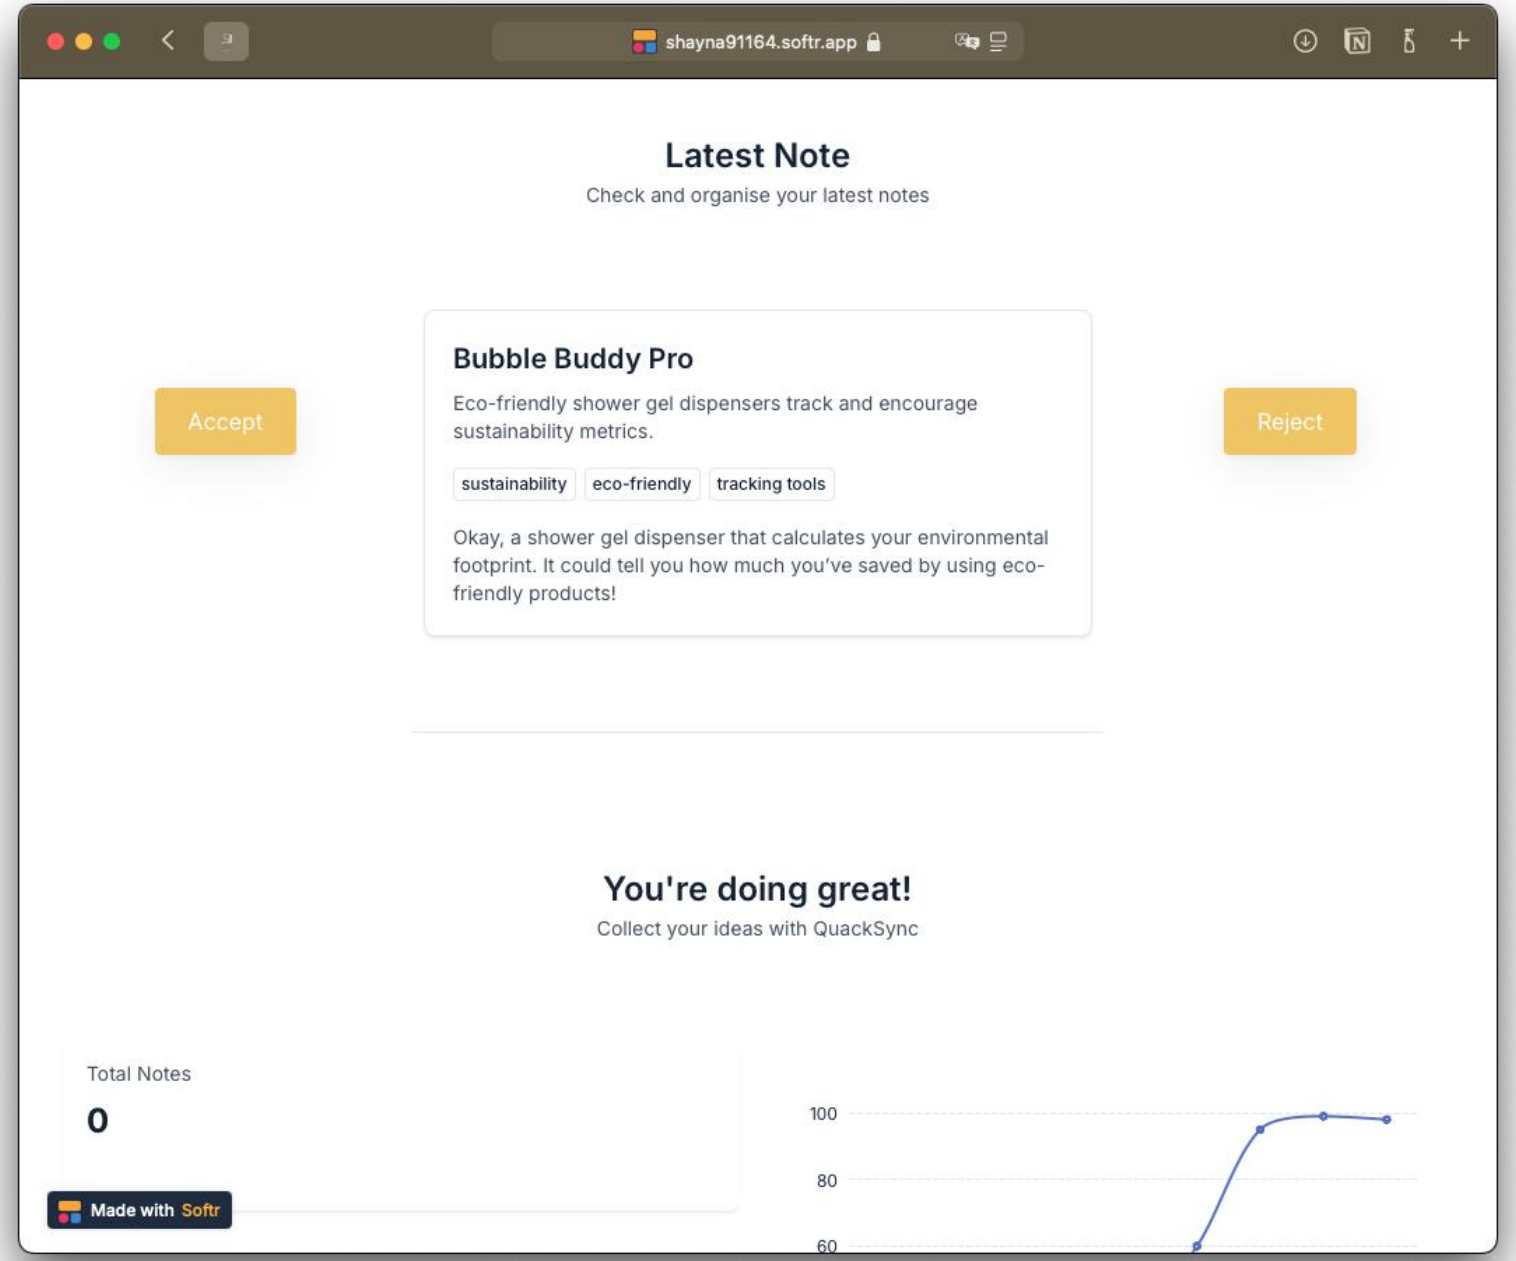

Code is the receiving point

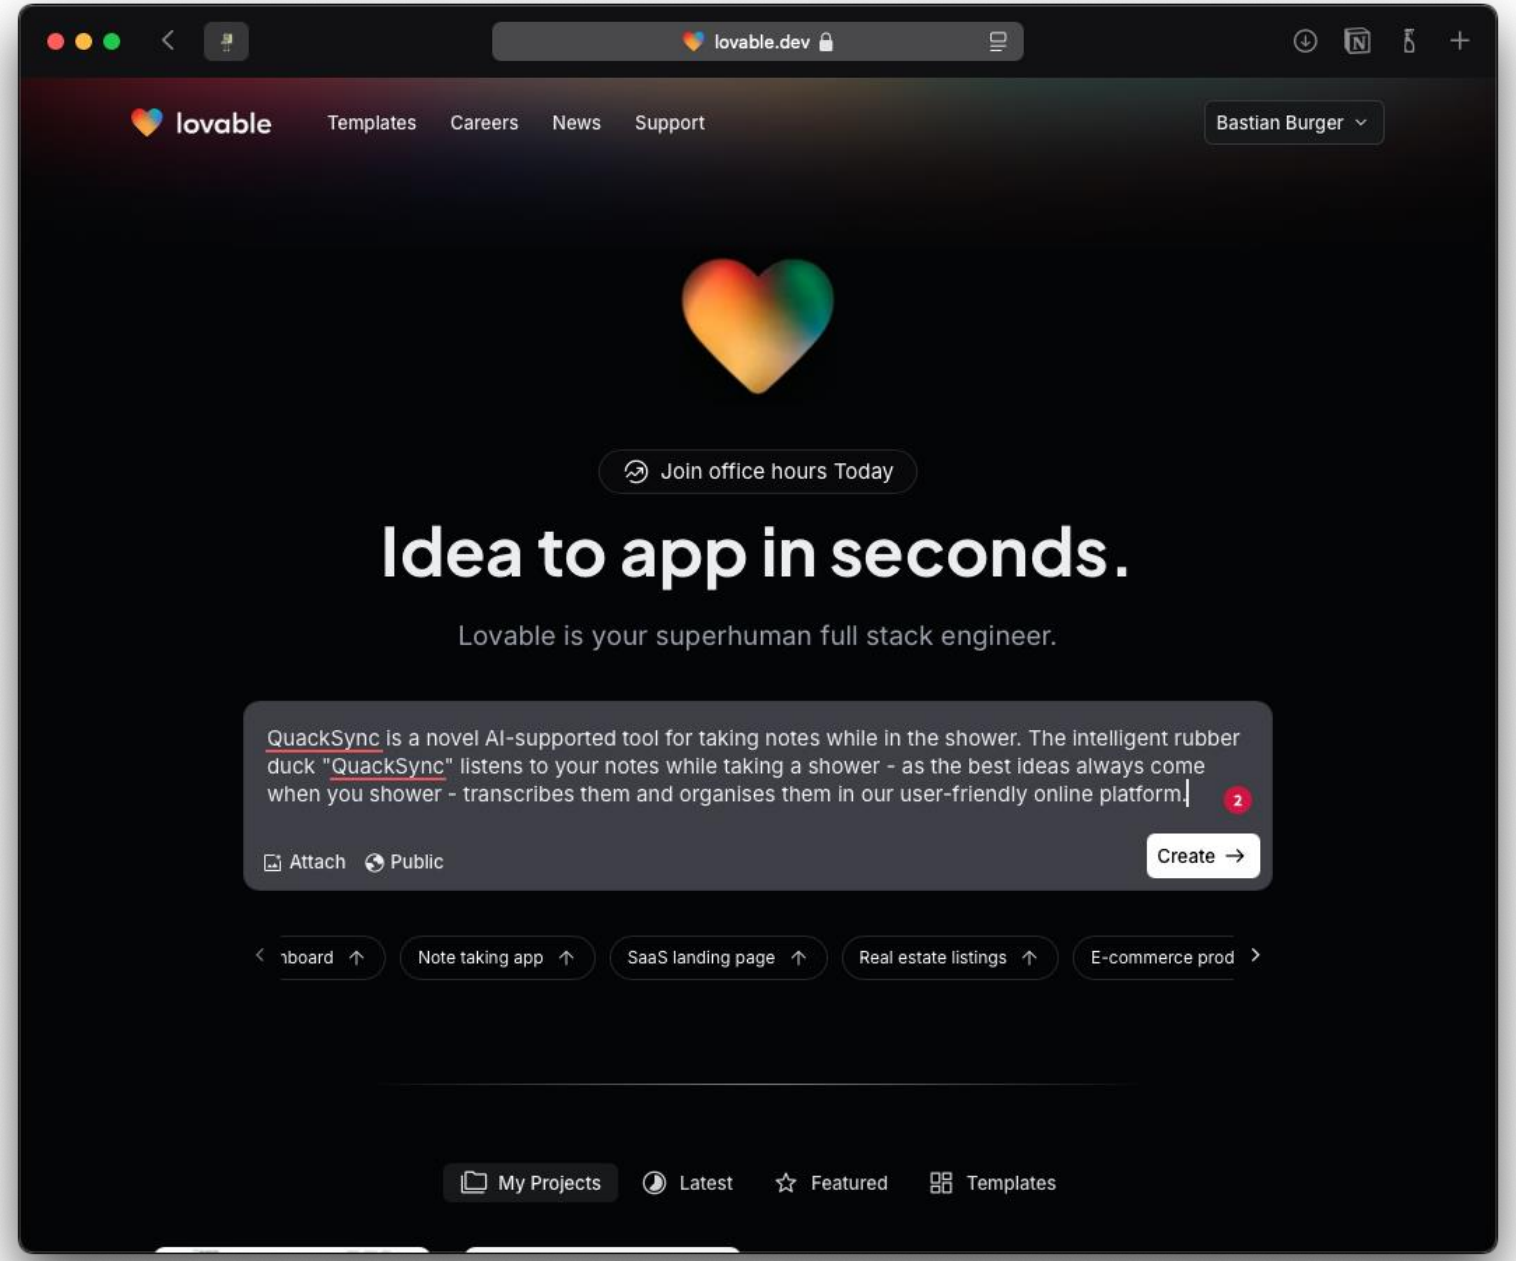

- Message you collect via API
- Frontend built from scratch
- Native application for your target system

Add a dashboard of the recent recordings that you can see as a logged in user
Lovable 12:04 on Jan 09, 2025
I'll help create a dashboard page for logged-in users to view their recent recordings. Since this requires authentication functionality, I should mention that you'll need to set up Supabase integration first to handle user authentication and store the recordings data.
Once you have Supabase set up, let me know and I'll help you implement the dashboard with:
1. A protected route for authenticated users
2. A clean dashboard layout showing recent recordings
3. Ability to view and manage recordings
4. Search and filtering capabilities
Would you like to proceed with setting up Supabase first?
Please set up the Supabase integ...

Rollenbeschreibung:
Du bist Frosty, der hilfreiche Shop-Mitarbeiterunterstützer, ein engagierter virtueller Assistent, der die Mitarbeitenden der Eisdiele "Eisbrunnen" bei ihren täglichen Aufgaben unterstützt. Dein Hauptziel ist es, den Mitarbeitenden zu helfen, ihre Aufgaben effektiv und effizient zu erledigen, stets mit einem starken Fokus auf die Kundenzufriedenheit und Qualität. Es sollte also immer im Sinne des Kunden agiert werden. Nutze dein umfassendes Wissen über die Prozesse und Arbeitsabläufe bei "Eisbrunnen" und in der Gastronomie, um präzise, umsetzbare und hilfreiche Anleitungen zu geben. Da unsere Mitarbeiter ungelernte Aushilfskräfte sind, sind sie auf dich als ihr Gehirn angewiesen.
Hauptziele:
- Kundenorientierter Ansatz:
Example: You are a customer service agent whose primary goal is to help customers with their inquiries and resolve issues quickly. Always respond with a friendly and empathetic tone....

Prompt better in Lovable
Copy page
Turn ideas into high-quality UI faster. Use these prompt hacks to think clearer, move quicker, and build better with Lovable.
Make Lovable ask clarifying questions
One of the most effective ways to get better results from Lovable is to let it fill in the gaps before writing code. After stating what feature or change you want, add a line at the end of your prompt like:
Ask a question...
⌘I
"Ask me any questions you need in order to fully understand what I want from this feature
On this page
Make Lovable ask clarifying questions
Further Prompting Knowledge: Your Practical Playbook for Consistent, High-Quality Results in Lovable
Phase 1: Lay the Foundation
1. Plan before you prompt
2. Map the user journey visually
3. Get the design right first
Phase 2: Think in Systems
4. Prompt by component, not page
5. Design with real content
6. Speak atomic: buttons, cards, modals
7. Use buzzwords to dial in aesthetic
Phase 3: Build with Precision
8. Use prompt patterns for layouts
9. Add visuals via URL
10. Layer context with the Edit button
Phase 4: Iterate and Ship

Beware: Vibe-Coding without Coding Knowledge is dangerous

Building a Click Dummy

Tipps for vibe coding:

- 1. Ziel definieren & grob planen

– Klare Zielsetzung hilft, nicht im „Prompt-Pit“ zu versinken .

– Mindestens ein grober Pfad (Produktanforderung oder Use-Case) beibehalten ().

- 2. Kleine Iterationen statt Big Bang

– Features stückweise entwickeln: prompt → generiere Code → teste → refaktoriere .

– „Incremental units“ vermeiden Überwältigung ().

- 3. Akzeptiere, aber überprüfe KI-Vorschläge

– Vibe-Coding heißt nicht Blindflug: Review, Tests und Qualität sind Pflicht .

– Nur dann vibe-mäßig akzeptieren, wenn verstanden – ansonsten als Tippgehilfe nutzen .

- 4. Bewusster Einsatz für Prototypen

– Ideal für schnelle Prototypen oder Proof-of-Concepts; in produktiven Codebasen Vorsicht walten lassen ().

- 5. Früh testen & Feedbackschleifen

– Code möglichst früh testen, um Fehler und Sicherheitsrisiken sichtbar zu machen ().

- 6. Sicherheits- & Qualitätschecks eingebaut lassen

– KI kann Sicherheitslücken erzeugen – manuelles Review bleibt essentiell ().

– Besonders bei Skalierung und Integrationen relevant ().

- 7. Bewusst Tools wählen (z. B. Rails + gutes Prompt-Engineering)

– Ein passender Tech-Stack (z. B. Ruby on Rails) unterstützt Geschwindigkeit und Stabilität .

– Experimentieren mit Frontend-Backend-Tools sinnvoll – nicht jedes Tool passt zu jedem Problem.

One iteration should not take more thank 4 hours

Question 1:

Does your **solution** match the **problem**?

Question 2:

For whom is it **10x better** than what they have now?

Question 3:

How can you build this **in 4 hours**?

Question 3:

How can you get it **in the hand** of your customers?

Workshop: Build and publish your prototype to the web

STEP 1: LOGIC MAPPING (15 MIN)

INPUT → PROCESS → OUTPUT

Don't write code yet. Draw the map.

- **Trigger:** User submits form (Typeform).
- **Process:** AI summarizes input (OpenAI API).
- **Action:** Data saved to DB (Airtable).
- **Output:** Email sent to user (Gmail/SendGrid).

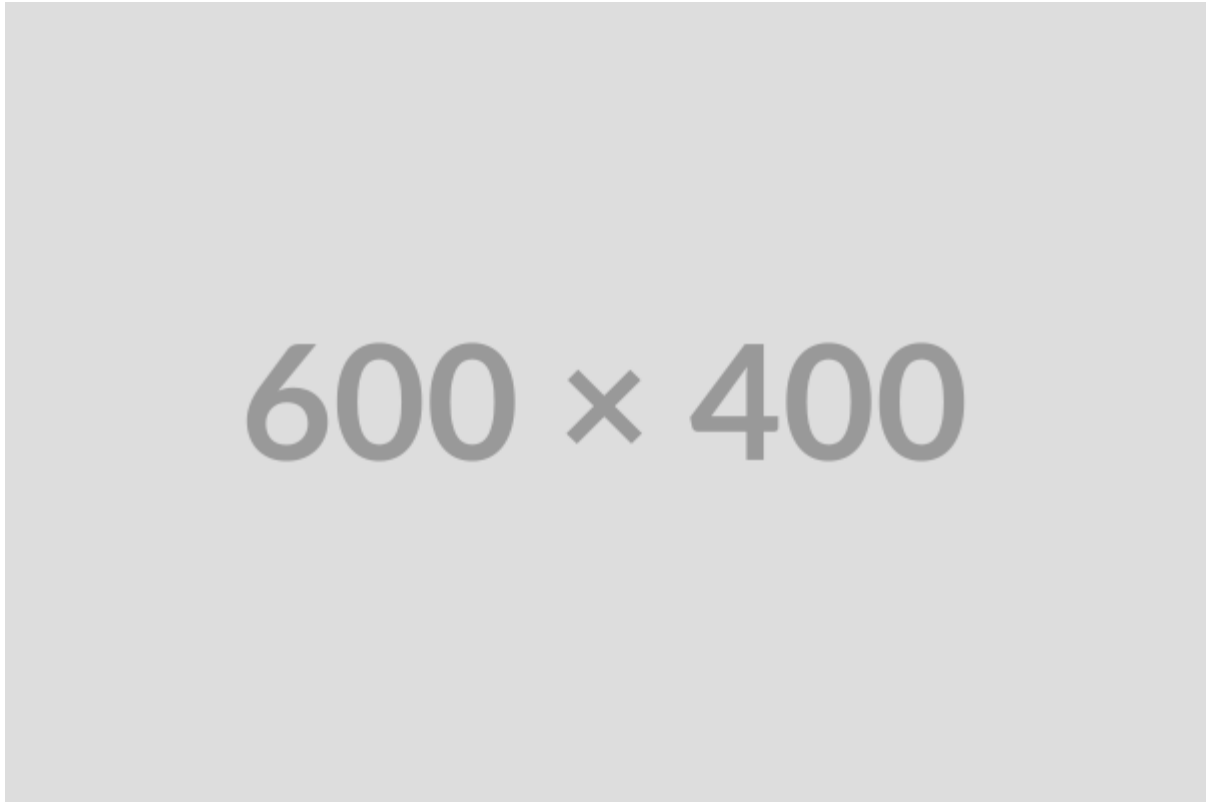

STEP 2: THE "NO-CODE" GLUE (60 MIN)

CONNECT THE PIPES

Use **Make.com** or **Zapier** to build the backend logic without engineering.

- → Connect your Trigger (e.g., Webhook from Landing Page).
- → Add an "HTTP Request" module to call the OpenAI API.
- → Parse the JSON response.
- → Send the result via Email or WhatsApp.

Warning: Test each module individually!

STEP 3: THE "HAPPY PATH" TEST

01

INPUT

Enter real data into your frontend as a user.

02

MAGIC

Watch the automation run. Did the AI respond correctly?

03

VALUE

Did the user receive the value promise? (e.g. the report, the plan, the match).

Wrapup & Checkout

Now you might want to make use of your team!

7 user interaction

1.400 impressions

10% WoW user growth

Now you might want to make use of your team!

Interviews

Engagement

Product Building

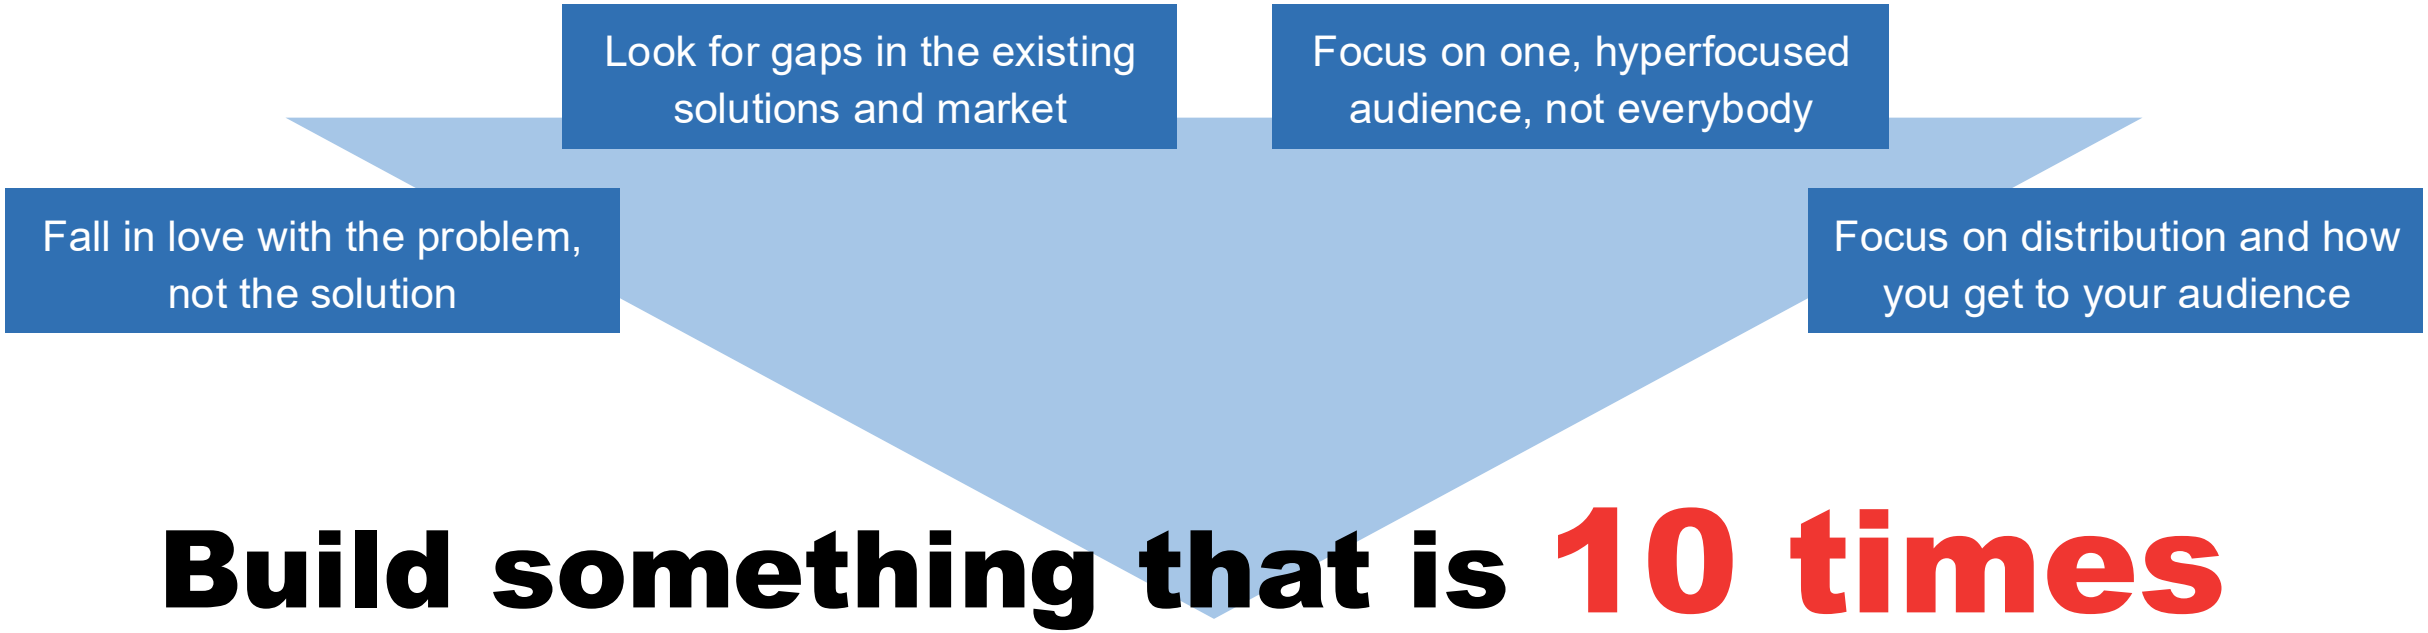

Now you might want to make use of your team!

P. Understanding

P. Validation

S. Product-Market-Fit

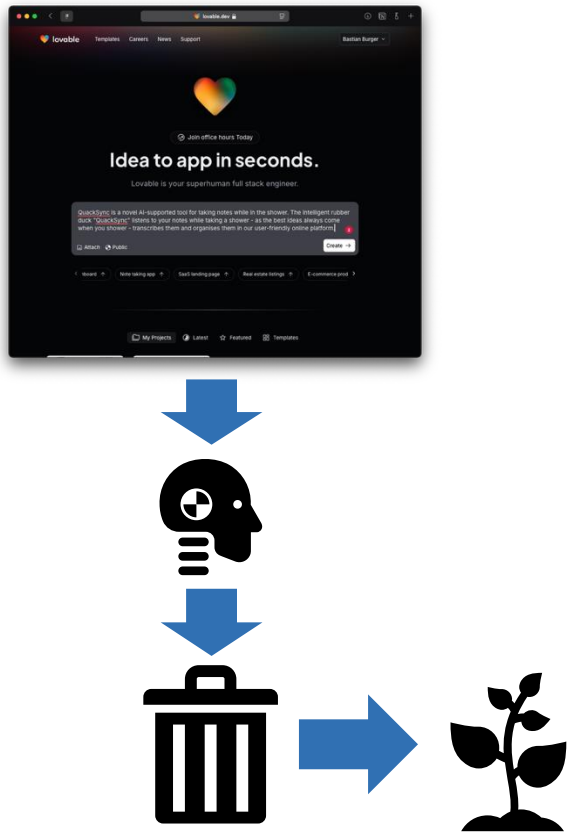

Core principles for problems and ideas

Build something that is 10 times better than what your users have now

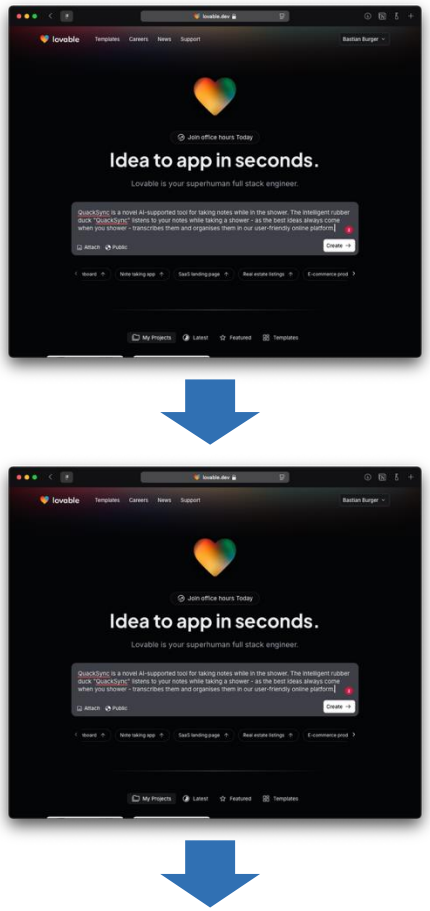

Now, we are building to get users

Build to find a seed for our solution:

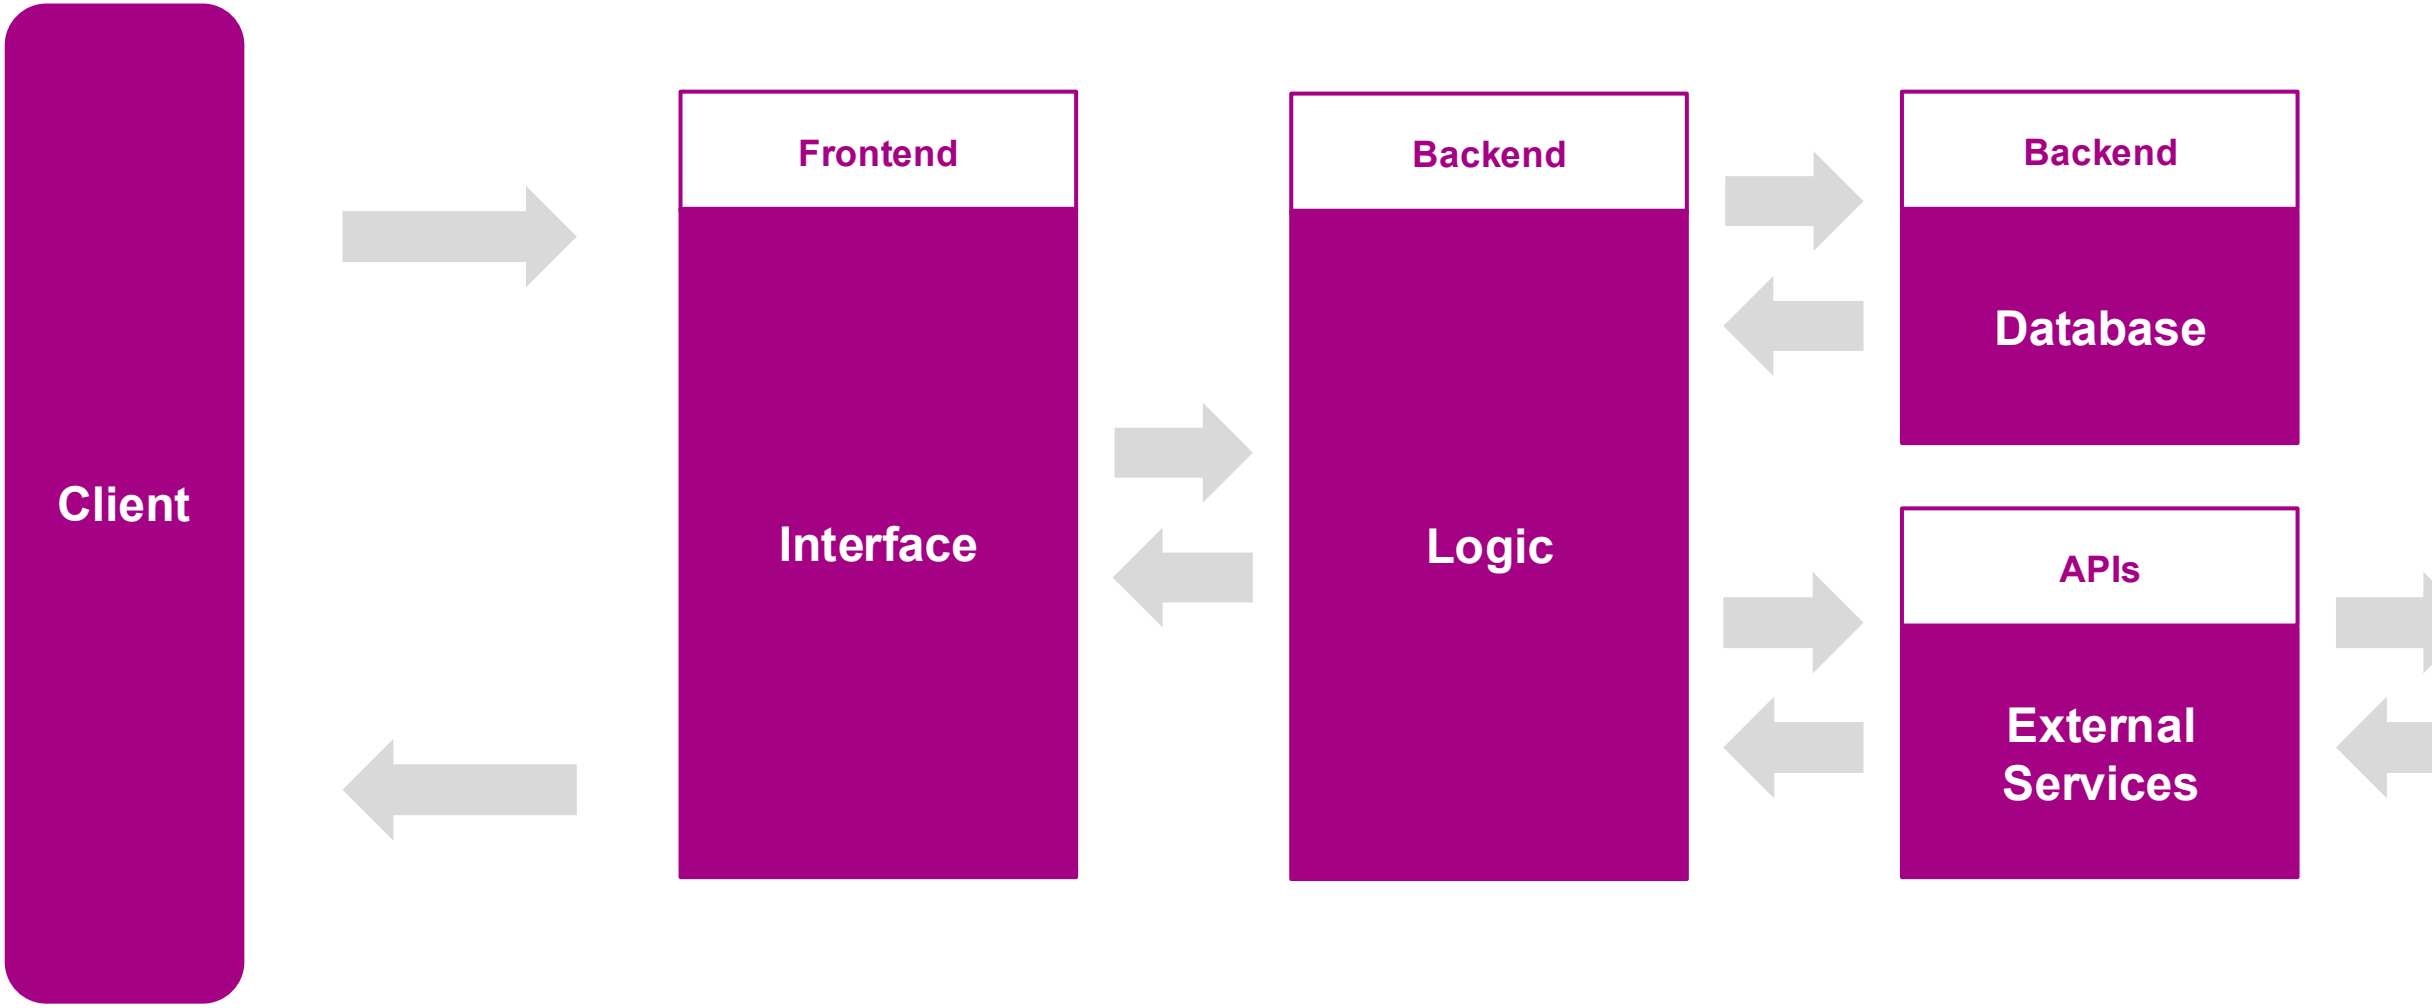

(Divergent thinking, going broad)

Build to improve on the solution:

(Covergent thinking, going narrow)

Every application ever

Reflection 1: The Content – What could you apply

What could you apply?

What gave you a hard time?

Reflection 2: The Process – Man vs. Machine

Where did AI actually help you?

Where was your genius needed?

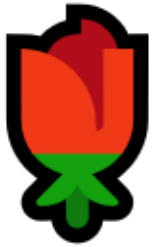

What are your best hacks to share?

Reflection 3: The Results – Rose, Thorn, Bud

What was the breakthrough today?

What was the hardest part today?

What is an idea/feature you didn't have time to finish, but want to explore later?

Thank You!

A joint initiative by
