Exemplar: Objection Log → Offer Change — Team TurbineTrack (M08–M09)

Synthetic exemplar — realistic but invented. The pattern-spotting at the bottom is the part most teams skip.

Pilot offer at first ask: €400 one-time, 3-week pilot, 5 technicians, success = 10 same-day reports.

#	Date	Who	Verbatim objection	Category
1	28.04	Owner, 6 techs	"€400 for software we might not keep? I pay per use, not upfront."	price structure
2	28.04	Ops lead, 15 techs	"Who types the old reports in? We have 4 years of Excel."	migration
3	29.04	Owner, 9 techs	"My techs are 55 and hate apps."	adoption
4	02.05	Owner, 12 techs	"If TÜV audits us, is your report format accepted?"	compliance
5	02.05	Ops lead, 8 techs	"Send an invoice and I'll get it approved — don't make me use PayPal."	payment rails
6	05.05	Owner, 6 techs	"€400 is fine. My problem: what happens to our data if you're gone in a year?"	trust/ continuity
7	06.05	Owner, 20 techs	"Per-tech pricing punishes me for growing."	price structure
8	07.05	Ops lead, 11 techs	"Can it work offline?" (third time asked)	product/ constraint
9	08.05	Owner, 7 techs	"Not before the summer maintenance peak ends."	timing
10	09.05	Owner, 14 techs	"Your demo shows wind. We do wind AND solar."	scope creep

Patterns (3+ = act): price STRUCTURE objections (1, 7 — never the amount!) · payment rails (5) · offline (8, + Markus in M03, + demo Q) → already in build.

Offer change (committed 09.05): €89/month flat per company (not per tech), cancel monthly, invoice + bank transfer as default payment, "your data exports to Excel anytime" line added. Price AMOUNT unchanged in year-value (€400 → €1,068/yr) — structure carried it.

Result after change: next 6 asks → 3 paid pilots (50% vs 10% before). Objection 10 (solar) logged and REFUSED — wedge discipline (M10's filter, early).

Why this scores well: verbatim, categorized, and the offer change traces to patterns — plus one objection consciously refused with a reason.
