Exemplar: Pain Map — Team TurbineTrack (M03)

Synthetic exemplar — realistic but invented. Note what makes it good: named humans, receipts not adjectives, and the budget column filled in.

Problem hypothesis: Independent wind-turbine service crews (3–20 technicians) lose billable hours because maintenance findings are captured on paper/WhatsApp and retyped into reports days later.

Segment	Who we talked to (name, role)	Frequency	Intensity (one incident costs)	Current spend / workaround	Budget authority?
Independent service SMEs, 5–20 techs	Markus B. (owner, 12 techs, Cuxhaven); Jens K. (ops lead, 8 techs)	Daily — every job ends in reporting	45–90 min retyping per tech per day; report disputes cost "a day of calls" (Markus)	Excel templates + 1 admin day/ week (~€350/wk); Jens pays a part-time office helper €800/mo	**YES — owner signs, said "under €500/mo I decide alone"**
In-house crews at operators	Sandra L. (team lead, 40-turbine portfolio)	Weekly batch	"Annoying, not burning" — SAP does it eventually	Included in corporate IT	NO — procurement, 6–9 month cycle
Inspection freelancers	Timo R.; Ayşe D.	Per assignment	30 min/report, but they bill hourly — pain is the CLIENT'S	None — pain externalized	N/A

Verbatim gold (the quotes that decided it): - "Every Friday I sit two hours matching photos to turbine IDs. I would pay real money to never do that again." — Markus B., 14.03. - "We lost a €9k claim because the finding wasn't documented the same day." — Jens K., 17.03. -

“If it doesn’t work offline at 90 meters in the wind, it doesn’t exist.” — Markus B. (constraint, went straight into M05 scoping)

Hair-on-fire verdict: Independent SMEs, owner-led, 5–20 techs. Daily frequency + money already spent on workarounds + owner IS the budget. In-house crews fail the budget-authority test (procurement), freelancers fail intensity (externalized pain).

JTBD: When my techs come down from a turbine, I want findings to become the client report the same day, so I can bill faster and never lose a claim to missing documentation.

Why this would score well: every cell is checkable (names, dates), spend is in euros not adjectives, and the segment choice is ARGUED from the columns — not asserted.
